

.NET on Ubuntu — August 2024

Package download statistics for the dotnet/backports PPA on Launchpad.

Reporting period	August 2024 (2024-08-01 to 2024-08-31, UTC)
Data window	2024-04-26 to 2026-07-31
Generated	2026-08-03 00:39:55 UTC
Origin	Backports PPA
Scope	dotnet6, dotnet7, dotnet8, dotnet9, dotnet10 · all Ubuntu series and architectures · debug-symbol packages excluded

At a glance

Headline volume and the month's most material movements.

 **Partial month.** 26 of 31 days carry download counts (84%). Totals understate actual volume.

Downloads in month 5,566 vs July 2024: -0.6%	Average per day 214 over 26 days with data	Year on year n/a no comparable month	Peak day 2,124 2024-08-22
Leading version dotnet6 86.5% of the month · 2 active versions	Newest version share 13.5% dotnet7 · -8.3pp	SDK per runtime download 0.41 developer-intent proxy · +17.6%	Lifetime to month end 17,718 cumulative since 2024-04-26

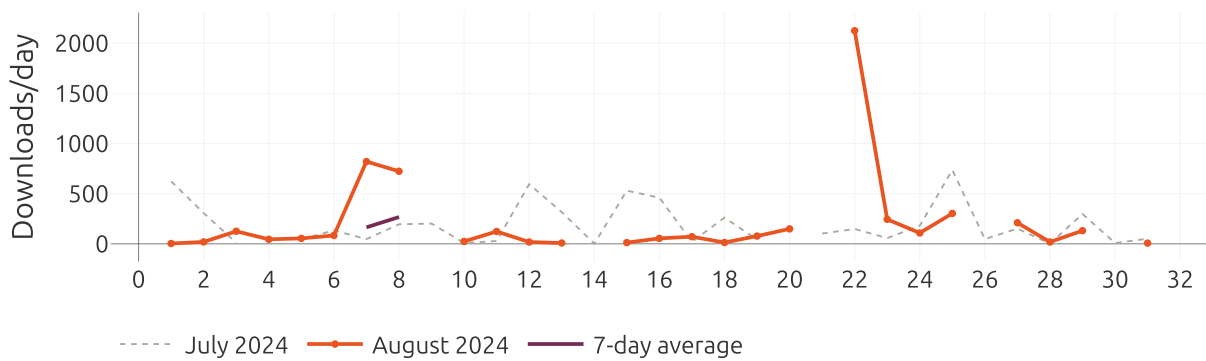

Key findings

- Data covers 26 of 31 days (84%); 5 day(s) are missing, so monthly totals understate actual volume and month-on-month comparisons are not like for like.
- Unusual spike on 2024-08-22 (2,124 downloads, 4.3σ above the month's mean) — worth confirming the cause before quoting the monthly total.
- 5,566 downloads in August 2024 (214/day), broadly flat, -0.6% against July 2024.
- dotnet7 lost share this month, down to 13.5% (-8.3pp).
- dotnet7 is being displaced: 13.5% of volume, -8.3pp on July 2024 — consistent with migration to newer releases.
- dotnet6 remains the most downloaded release at 86.5% of the month, across 2 active .NET versions.
- Every runtime-only download came with 0.41 SDK downloads (544 SDK vs 1,315 runtime), +17.6% on July 2024 — the mix shifted towards development and build environments.

Monthly downloads, last 5 months

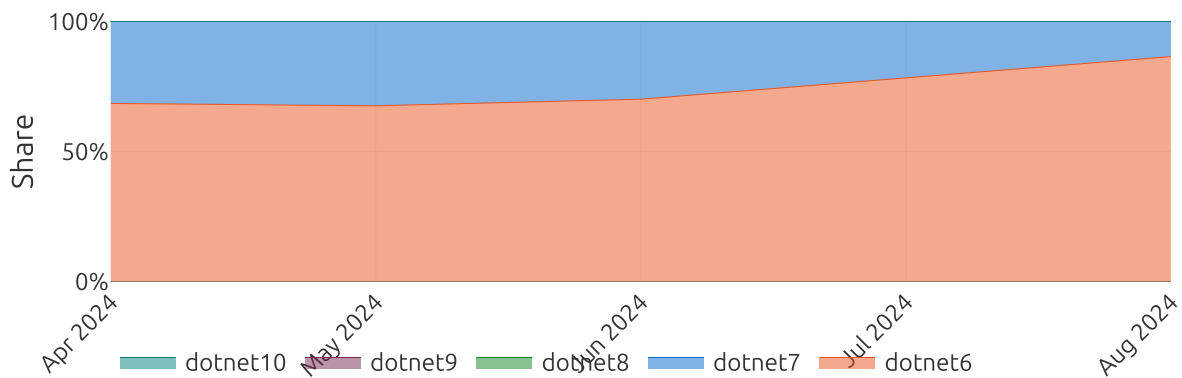

Daily downloads through the month (day of month on x axis)

Composition & adoption

Which .NET releases, Ubuntu series and architectures the downloads came from, and how the mix moved.

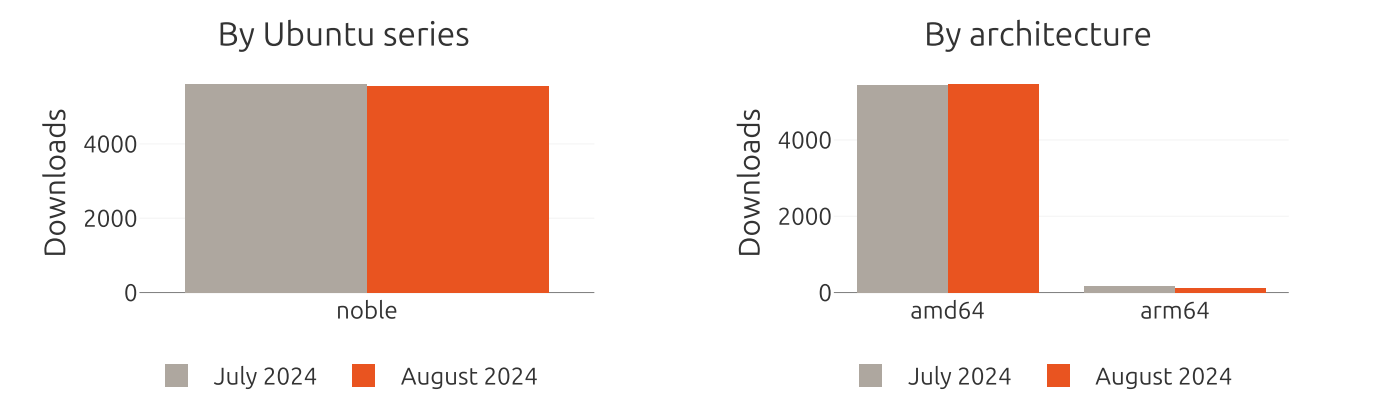

Share of downloads by .NET version

Version detail

VERSION	DOWNLOADS	SHARE	MOM	SHARE CHANGE
dotnet6	4,815	86.5%	+10.0%	+8.3pp
dotnet7	751	13.5%	-38.6%	-8.3pp

Share change is in percentage points against July 2024.

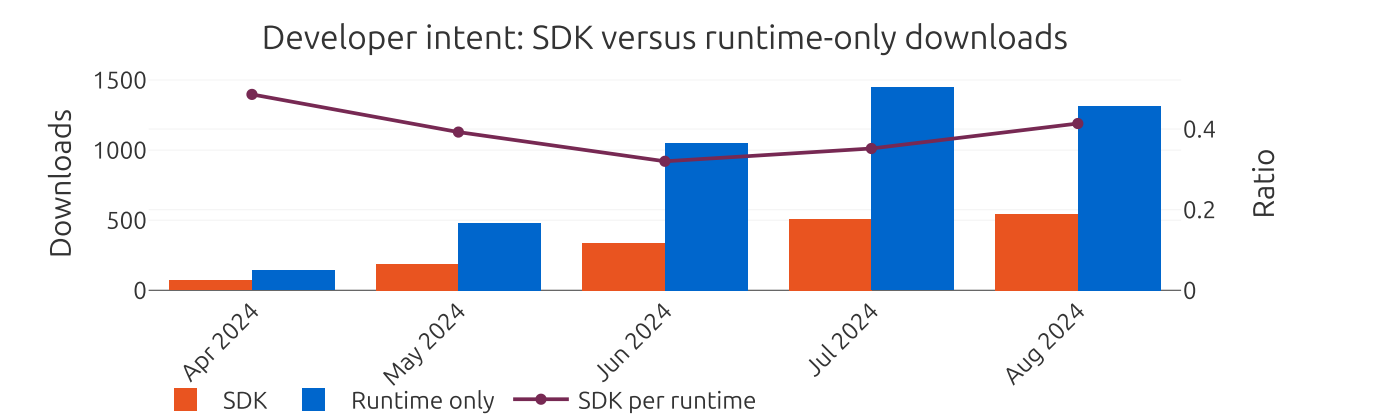

Ubuntu series detail

VALUE	DOWNLOADS	SHARE	JULY 2024	MOM
noble	5,566	100.0%	5,602	-0.6%

LTS series (jammy (22.04 LTS), noble (24.04 LTS)) account for 100.0% of the month, +0.0pp on July 2024.

Architecture detail

VALUE	DOWNLOADS	SHARE	JULY 2024	MOM
amd64	5,456	98.0%	5,427	+0.5%
arm64	110	2.0%	175	-37.1%

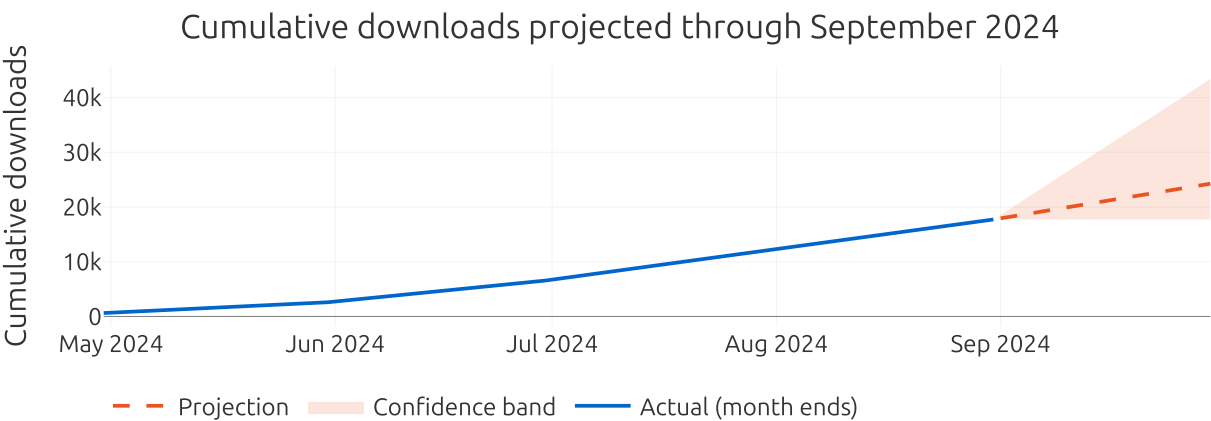

Top packages this month

PACKAGE	TYPE	DOWNLOADS	MOM
dotnet-hostfxr-6.0	hostfxr	601	-1.6%
dotnet-runtime-6.0	runtime	600	-1.6%
aspnetcore-runtime-6.0	aspnetcore-runtime	525	-0.8%
aspnetcore-targeting-pack-6.0	targeting-pack	486	+19.7%
dotnet-targeting-pack-6.0	targeting-pack	485	+19.5%
dotnet-apphost-pack-6.0	apphost-pack	484	+19.8%
dotnet-templates-6.0	other	464	+18.1%
dotnet-sdk-6.0	sdk	463	+18.7%
dotnet-host	host	319	-13.1%
netstandard-targeting-pack-2.1	targeting-pack	277	+16.4%

SDK downloads indicate development and build environments; runtime-only downloads indicate deployment targets. Neither is a count of people.

Trajectory & watch items

Where the trend is heading, and what needs a human explanation.

Projection fits the daily rate of the 60 days to 2024-08-31 and extrapolates linearly; it assumes no new release events. Indicative total for September 2024: 6,545 downloads. Only 88% of the fit window carries data, so treat this figure as a lower bound at best.

Momentum by version

VERSION	DOWNLOADS IN MONTH	LAST 7D VS PRIOR 7D	LAST 30D VS PRIOR 30D	TREND (DL/DAY ²)	EST. HALF-LIFE
dotnet6	4,815	-76.1%	+29.0%	2.3	growing / stable
dotnet7	751	-68.9%	-20.6%	-0.1	47 days

Windows end on 2024-08-31. Days without data are treated as zero inside these windows, so a collection gap depresses the figures.

Days needing explanation

DATE	DOWNLOADS	ABOVE MONTH MEAN
2024-08-22	2,124	4.3 σ

Days more than two standard deviations above the month's mean. Common causes are release publications, mirror synchronisation and CI bursts.

Data coverage

MEASURE	VALUE
Days in month	31
Days expected in window	31
Days with download counts	26
Coverage	83.9%
Missing days	5
Gaps	2024-08-09, 2024-08-14, 2024-08-21, 2024-08-26, 2024-08-30
Month fully elapsed in dataset	yes
Publications active in month	65
Publications first seen in month	23
Collector last run	2026-07-31

A publication is one binary package version in one series and architecture. A burst of first-seen publications usually follows a release upload or a resumed collection window, not a change in demand.

Methodology & limitations

Figures count package downloads recorded by Launchpad for the dotnet/backports PPA only.

The primary Ubuntu archive publishes no download telemetry, so packages installed from it are not represented here. This report is a directional indicator, not total .NET usage on Ubuntu.

Downloads are not users. CI/CD pipelines, container image builds, mirrors and repeated installations all inflate counts, and one developer may generate many downloads.

Counts are deduplicated per publication and day, keeping the maximum value reported by Launchpad; recent days may still rise as Launchpad reporting settles.

Debug-symbol packages are excluded from every figure in this report.

No data is collected for any other programming language, so this report makes no cross-language comparison.

Source: Launchpad download counts for Backports PPA. Collected by scripts/collect.py; figures reproducible from data/downloads.json for month 2024-08.
