

.NET on Ubuntu — August 2025

Package download statistics for the dotnet/backports PPA on Launchpad.

Reporting period	August 2025 (2025-08-01 to 2025-08-31, UTC)
Data window	2024-04-26 to 2026-07-31
Generated	2026-08-03 00:40:30 UTC
Origin	Backports PPA
Scope	dotnet6, dotnet7, dotnet8, dotnet9, dotnet10 · all Ubuntu series and architectures · debug-symbol packages excluded

At a glance

Headline volume and the month's most material movements.

Downloads in month 636,778 vs July 2025: +349.0%	Average per day 20,541 over 31 days with data	Year on year 114× vs August 2024 (5,566)	Peak day 42,855 2025-08-07
Leading version dotnet9 87.1% of the month · 3 active versions	Newest version share 87.1% dotnet9 · +2.9pp	SDK per runtime download 0.72 developer-intent proxy · -4.1%	Lifetime to month end 1,200,731 cumulative since 2024-04-26

Key findings

Unusual spike on 2025-08-07 (42,855 downloads, 3.2σ above the month's mean) — worth confirming the cause before quoting the monthly total.
636,778 downloads in August 2025 (20,541/day), up +349.0% against July 2025. Year on year the month is 114× higher than August 2024.
Every runtime-only download came with 0.72 SDK downloads (96,586 SDK vs 135,070 runtime) — a proxy for developer-side rather than deployment-side pull.
arm64 is now 5.3% of downloads (+3.4pp on July 2025).
Linear extrapolation of the last 60 days projects roughly 954,614 downloads in September 2025 (+49.9% on August 2025).

Monthly downloads, last 13 months

Daily downloads through the month (day of month on x axis)

Composition & adoption

Which .NET releases, Ubuntu series and architectures the downloads came from, and how the mix moved.

Share of downloads by .NET version

Version detail

VERSION	DOWNLOADS	SHARE	MOM	SHARE CHANGE
dotnet9	554,743	87.1%	+364.5%	+2.9pp
dotnet6	72,009	11.3%	+290.7%	-1.7pp
dotnet7	10,026	1.6%	+152.3%	-1.2pp

Share change is in percentage points against July 2025.

Ubuntu series detail

VALUE	DOWNLOADS	SHARE	JULY 2025	MOM
noble	489,060	76.8%	102,106	+379.0%
jammy	147,718	23.2%	39,719	+271.9%

LTS series (jammy (22.04 LTS), noble (24.04 LTS)) account for 100.0% of the month, +0.0pp on July 2025.

Architecture detail

VALUE	DOWNLOADS	SHARE	JULY 2025	MOM
amd64	602,795	94.7%	138,957	+333.8%
arm64	33,878	5.3%	2,679	+1164.6%
ppc64el	68	0.0%	161	-57.8%
s390x	37	0.0%	28	+32.1%

Developer intent: SDK versus runtime-only downloads

Top packages this month

PACKAGE	TYPE	DOWNLOADS	MOM
dotnet-runtime-9.0	runtime	58,694	+390.0%
dotnet-host-9.0	host	58,429	+389.6%
dotnet-hostfxr-9.0	hostfxr	58,238	+388.8%
aspnetcore-runtime-9.0	aspnetcore-runtime	56,642	+387.3%
aspnetcore-targeting-pack-9.0	targeting-pack	47,194	+346.1%
dotnet-apphost-pack-9.0	apphost-pack	47,174	+345.8%
dotnet-targeting-pack-9.0	targeting-pack	47,132	+345.7%
netstandard-targeting-pack-2.1-9.0	targeting-pack	45,841	+347.9%
dotnet-sdk-9.0	sdk	45,695	+349.6%
dotnet-templates-9.0	other	45,626	+347.8%

SDK downloads indicate development and build environments; runtime-only downloads indicate deployment targets. Neither is a count of people.

Trajectory & watch items

Where the trend is heading, and what needs a human explanation.

Projection fits the daily rate of the 60 days to 2025-08-31 and extrapolates linearly; it assumes no new release events. Indicative total for September 2025: **954,614** downloads.

Momentum by version

VERSION	DOWNLOADS IN MONTH	LAST 7D VS PRIOR 7D	LAST 30D VS PRIOR 30D	TREND (DL/DAY²)	EST. HALF-LIFE
dotnet6	72,009	-27.3%	+301.7%	-6.6	growing / stable
dotnet7	10,026	-7.0%	+166.0%	-2.5	growing / stable
dotnet9	554,743	+8.4%	+353.8%	-112.8	growing / stable

Windows end on 2025-08-31. Days without data are treated as zero inside these windows, so a collection gap depresses the figures.

Days needing explanation

DATE	DOWNLOADS	ABOVE MONTH MEAN
2025-08-07	42,855	3.2σ

Days more than two standard deviations above the month's mean. Common causes are release publications, mirror synchronisation and CI bursts.

Data coverage

MEASURE	VALUE
Days in month	31
Days expected in window	31
Days with download counts	31
Coverage	100.0%
Missing days	0
Gaps	none
Month fully elapsed in dataset	yes
Publications active in month	250
Publications first seen in month	113
Collector last run	2026-07-31

A publication is one binary package version in one series and architecture. A burst of first-seen publications usually follows a release upload or a resumed collection window, not a change in demand.

Methodology & limitations

Figures count package downloads recorded by Launchpad for the dotnet/backports PPA only.

The primary Ubuntu archive publishes no download telemetry, so packages installed from it are not represented here. This report is a directional indicator, not total .NET usage on Ubuntu.

Downloads are not users. CI/CD pipelines, container image builds, mirrors and repeated installations all inflate counts, and one developer may generate many downloads.

Counts are deduplicated per publication and day, keeping the maximum value reported by Launchpad; recent days may still rise as Launchpad reporting settles.

Debug-symbol packages are excluded from every figure in this report.

No data is collected for any other programming language, so this report makes no cross-language comparison.

Source: Launchpad download counts for Backports PPA. Collected by scripts/collect.py; figures reproducible from data/downloads.json for month 2025-08.
