

.NET on Ubuntu — March 2025

Package download statistics for the dotnet/backports PPA on Launchpad.

Reporting period	March 2025 (2025-03-01 to 2025-03-31, UTC)
Data window	2024-04-26 to 2026-07-31
Generated	2026-08-03 00:40:16 UTC
Origin	Backports PPA
Scope	dotnet6, dotnet7, dotnet8, dotnet9, dotnet10 · all Ubuntu series and architectures · debug-symbol packages excluded

At a glance

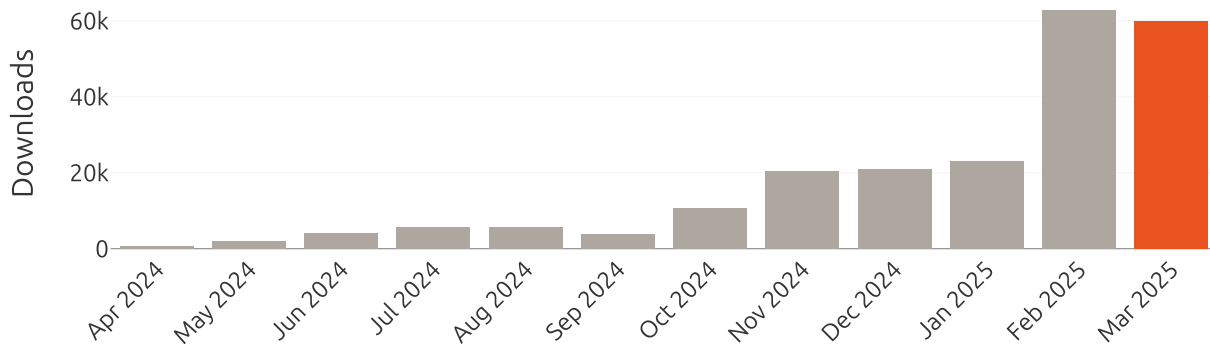

Headline volume and the month's most material movements.

Downloads in month 59,834 vs February 2025: -4.6%	Average per day 1,930 over 31 days with data	Year on year n/a no comparable month	Peak day 24,143 2025-03-12
Leading version dotnet9 89.5% of the month · 3 active versions	Newest version share 89.5% dotnet9 · +3.2pp	SDK per runtime download 0.76 developer-intent proxy · +59.7%	Lifetime to month end 219,124 cumulative since 2024-04-26

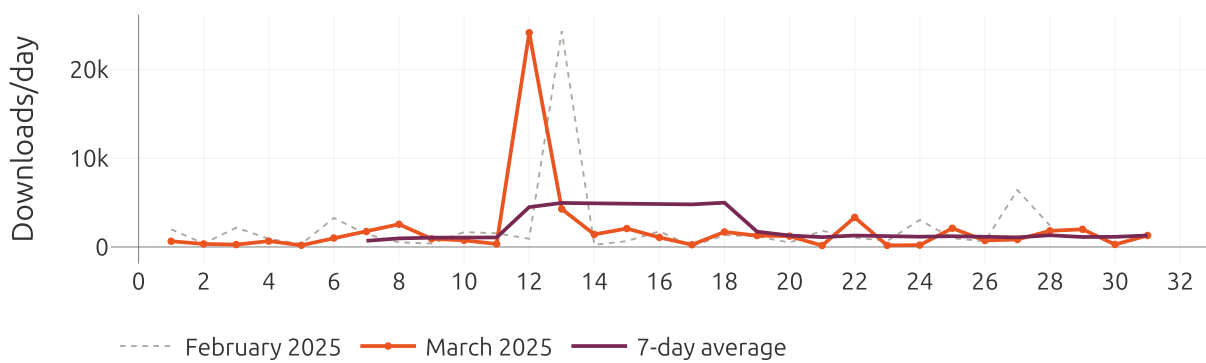

Key findings

Unusual spike on 2025-03-12 (24,143 downloads, 5.2σ above the month's mean) — worth confirming the cause before quoting the monthly total.
59,834 downloads in March 2025 (1,930/day), broadly flat, -4.6% against February 2025.
Adoption of dotnet9 is accelerating: 89.5% of the month's volume, +3.2pp on February 2025 (-1.1% in absolute terms).
Every runtime-only download came with 0.76 SDK downloads (8,955 SDK vs 11,855 runtime), +59.7% on February 2025 — the mix shifted towards development and build environments.
Ubuntu noble takes 64.8% of the month's downloads; LTS releases account for 100.0% in total.
Linear extrapolation of the last 60 days projects roughly 52,766 downloads in April 2025 (-11.8% on March 2025).

Monthly downloads, last 12 months

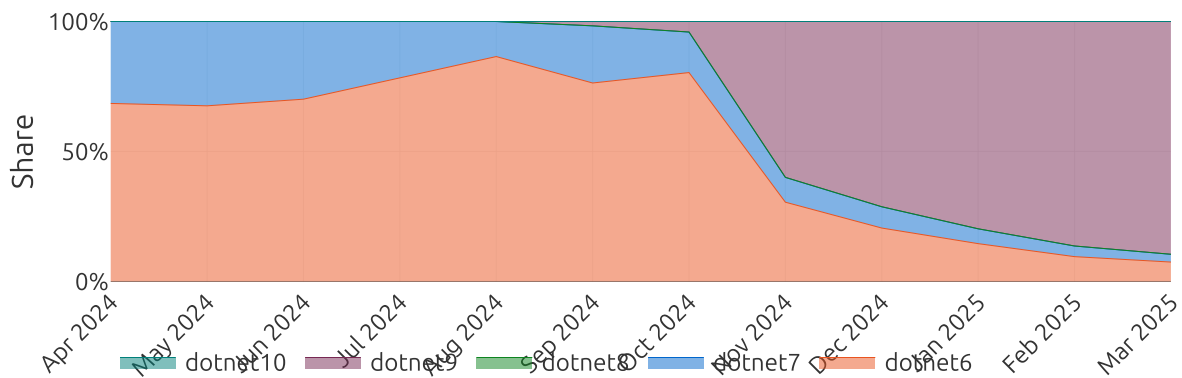

Daily downloads through the month (day of month on x axis)

Composition & adoption

Which .NET releases, Ubuntu series and architectures the downloads came from, and how the mix moved.

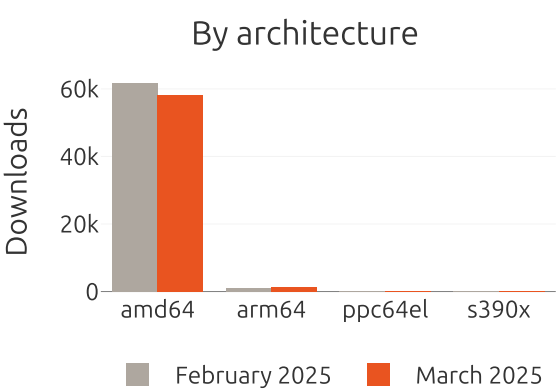

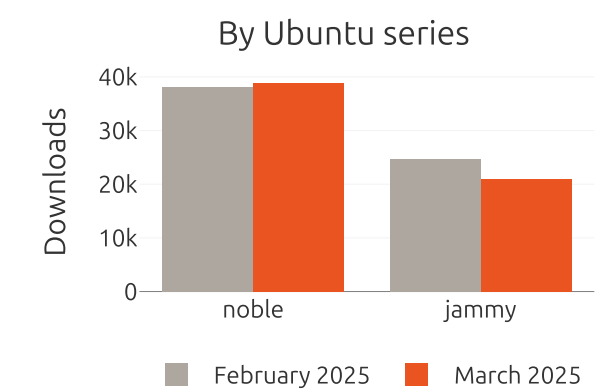

Share of downloads by .NET version

Version detail

VERSION	DOWNLOADS	SHARE	MOM	SHARE CHANGE
dotnet9	53,576	89.5%	-1.1%	+3.2pp
dotnet6	4,465	7.5%	-25.4%	-2.1pp
dotnet7	1,793	3.0%	-30.2%	-1.1pp

Share change is in percentage points against February 2025.

Ubuntu series detail

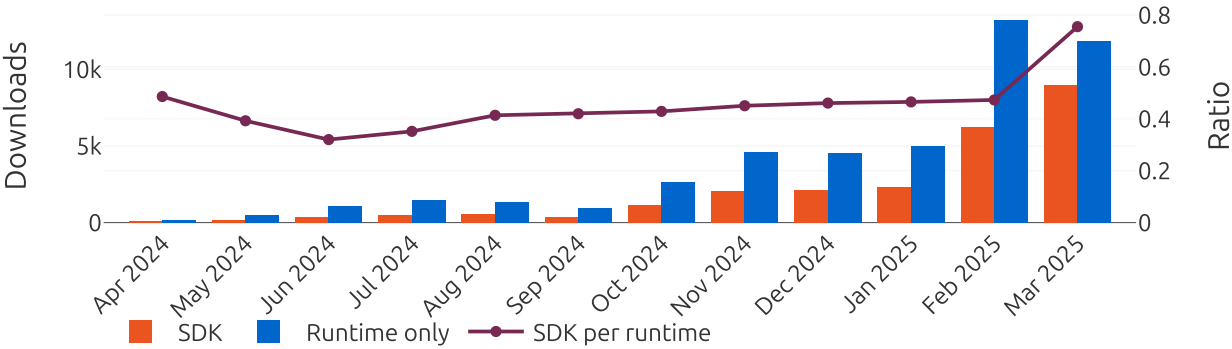

VALUE	DOWNLOADS	SHARE	FEBRUARY 2025	MOM
noble	38,788	64.8%	38,086	+1.8%
jammy	21,046	35.2%	24,634	-14.6%

LTS series (jammy (22.04 LTS), noble (24.04 LTS)) account for 100.0% of the month, +0.0pp on February 2025.

Architecture detail

VALUE	DOWNLOADS	SHARE	FEBRUARY 2025	MOM
amd64	58,316	97.5%	61,639	-5.4%
arm64	1,458	2.4%	1,029	+41.7%
ppc64el	30	0.1%	26	+15.4%
s390x	30	0.1%	26	+15.4%

Developer intent: SDK versus runtime-only downloads

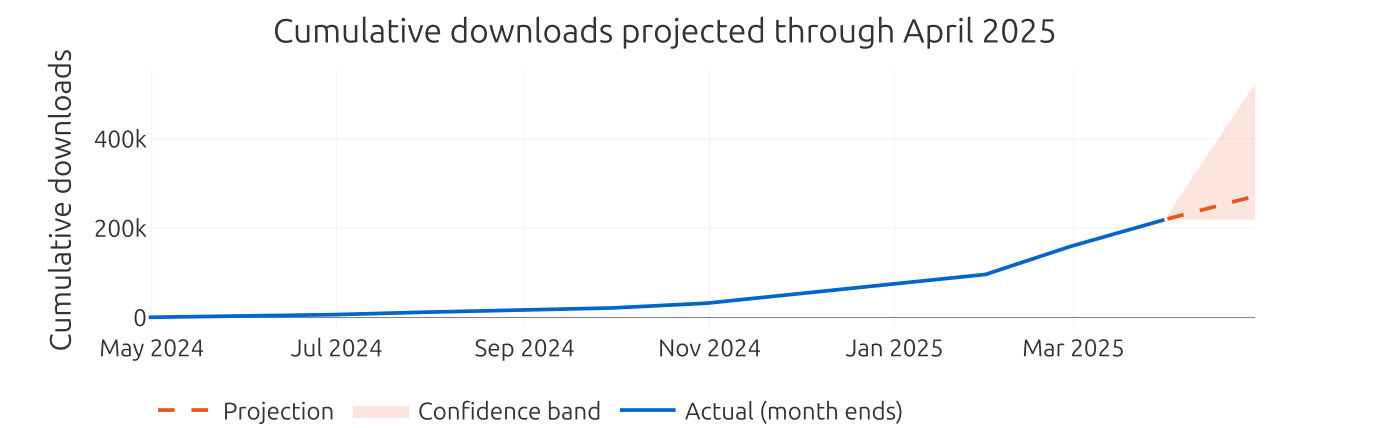

Top packages this month

PACKAGE	TYPE	DOWNLOADS	MOM
dotnet-host-9.0	host	5,275	-7.5%
dotnet-hostfxr-9.0	hostfxr	5,207	-7.5%
dotnet-runtime-9.0	runtime	5,195	-7.4%
aspnetcore-runtime-9.0	aspnetcore-runtime	5,103	-7.0%
netstandard-targeting-pack-2.1-9.0	targeting-pack	4,884	-7.5%
dotnet-templates-9.0	other	4,864	-7.6%
aspnetcore-targeting-pack-9.0	targeting-pack	4,833	-7.2%
dotnet-apphost-pack-9.0	apphost-pack	4,830	-7.2%
dotnet-targeting-pack-9.0	targeting-pack	4,823	-7.3%
dotnet-sdk-9.0	sdk	4,766	-8.5%

SDK downloads indicate development and build environments; runtime-only downloads indicate deployment targets. Neither is a count of people.

Trajectory & watch items

Where the trend is heading, and what needs a human explanation.

Projection fits the daily rate of the 60 days to 2025-03-31 and extrapolates linearly; it assumes no new release events. Indicative total for April 2025: 52,766 downloads.

Momentum by version

VERSION	DOWNLOADS IN MONTH	LAST 7D VS PRIOR 7D	LAST 30D VS PRIOR 30D	TREND (DL/DAY²)	EST. HALF-LIFE
dotnet6	4,465	-3.9%	-28.1%	-1.8	60 days
dotnet7	1,793	+48.2%	-32.7%	-0.9	71 days
dotnet9	53,576	+12.7%	-4.2%	-20.8	growing / stable

Windows end on 2025-03-31. Days without data are treated as zero inside these windows, so a collection gap depresses the figures.

Days needing explanation

DATE	DOWNLOADS	ABOVE MONTH MEAN
2025-03-12	24,143	5.2σ

Days more than two standard deviations above the month's mean. Common causes are release publications, mirror synchronisation and CI bursts.

Data coverage

MEASURE	VALUE
Days in month	31
Days expected in window	31
Days with download counts	31
Coverage	100.0%
Missing days	0
Gaps	none
Month fully elapsed in dataset	yes
Publications active in month	223
Publications first seen in month	124
Collector last run	2026-07-31

A publication is one binary package version in one series and architecture. A burst of first-seen publications usually follows a release upload or a resumed collection window, not a change in demand.

Methodology & limitations

Figures count package downloads recorded by Launchpad for the dotnet/backports PPA only.

The primary Ubuntu archive publishes no download telemetry, so packages installed from it are not represented here. This report is a directional indicator, not total .NET usage on Ubuntu.

Downloads are not users. CI/CD pipelines, container image builds, mirrors and repeated installations all inflate counts, and one developer may generate many downloads.

Counts are deduplicated per publication and day, keeping the maximum value reported by Launchpad; recent days may still rise as Launchpad reporting settles.

Debug-symbol packages are excluded from every figure in this report.

No data is collected for any other programming language, so this report makes no cross-language comparison.

Source: Launchpad download counts for Backports PPA. Collected by scripts/collect.py; figures reproducible from data/downloads.json for month 2025-03.
