

.NET on Ubuntu — September 2026

Package download statistics for the dotnet/backports PPA on Launchpad.

Reporting period	September 2026 (2026-09-01 to 2026-09-30, UTC)
Data window	2024-04-26 to 2026-10-02
Generated	2026-10-02 07:24:48 UTC
Origin	Backports PPA
Scope	dotnet6, dotnet7, dotnet8, dotnet9, dotnet10 · all Ubuntu series and architectures · debug-symbol packages excluded

At a glance

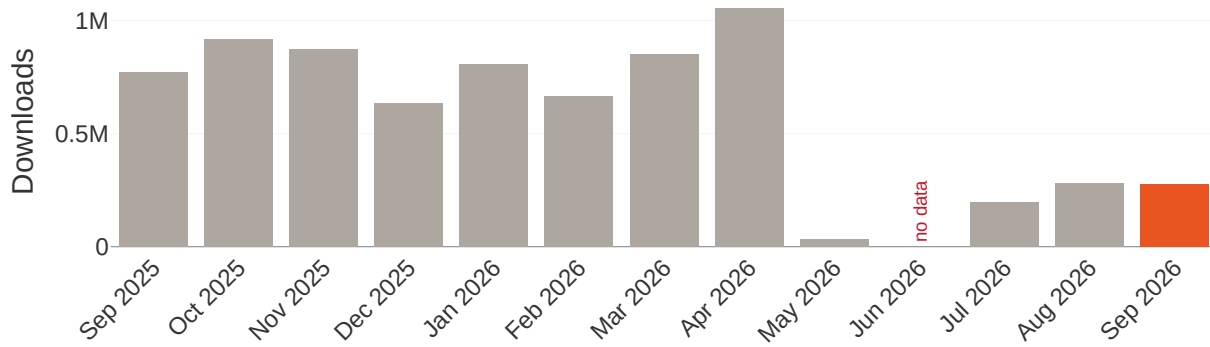

Headline volume and the month's most material movements.

Downloads in month 277,965 vs August 2026: -1.7%	Average per day 9,266 over 30 days with data	Year on year -64.0% vs September 2025 (772,852)	Peak day 15,361 2026-09-07
Leading version dotnet9 45.5% of the month · 5 active versions	Newest version share 15.8% dotnet10 · -2.9pp	SDK per runtime download 0.77 developer-intent proxy · -0.9%	Lifetime to month end 8,574,794 cumulative since 2024-04-26

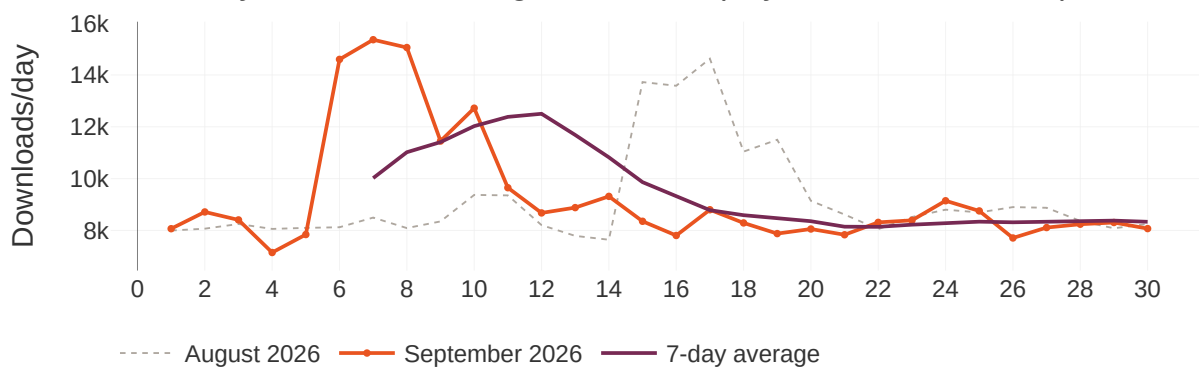

Key findings

277,965 downloads in September 2026 (9,266/day), broadly flat, -1.7% against August 2026. Year on year the month is -64.0% versus September 2025.
dotnet9 remains the most downloaded release at 45.5% of the month, across 5 active .NET versions.
Every runtime-only download came with 0.77 SDK downloads (48,049 SDK vs 62,161 runtime) — a proxy for developer-side rather than deployment-side pull.
Ubuntu noble takes 37.1% of the month's downloads; LTS releases account for 70.5% in total.
Linear extrapolation of the last 60 days projects roughly 274,327 downloads in October 2026 (-1.3% on September 2026).

Monthly downloads, last 13 months

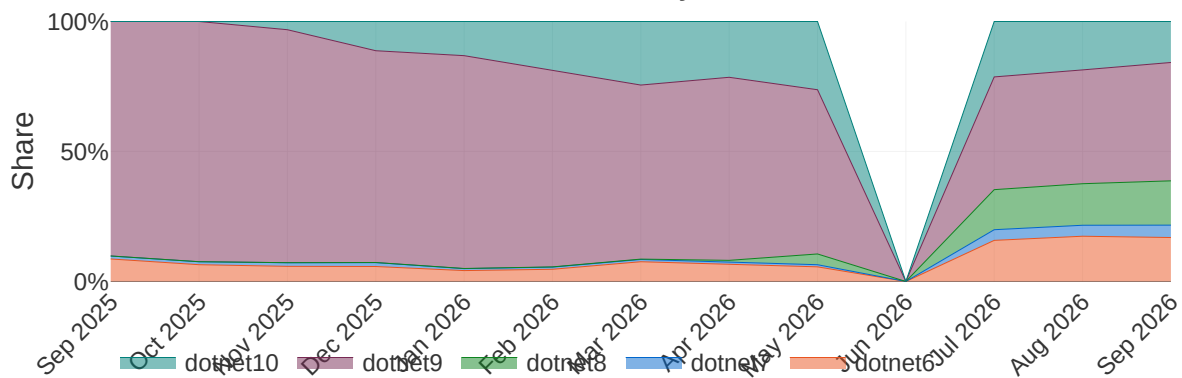

Daily downloads through the month (day of month on x axis)

Composition & adoption

Which .NET releases, Ubuntu series and architectures the downloads came from, and how the mix moved.

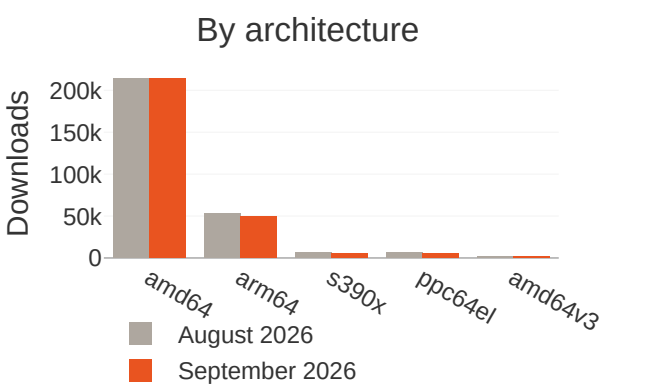

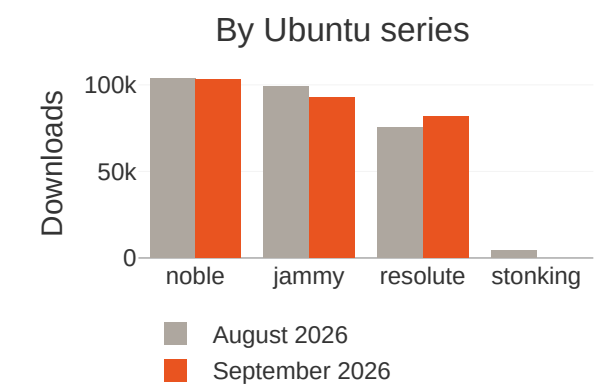

Share of downloads by .NET version

Version detail

VERSION	DOWNLOADS	SHARE	MOM	SHARE CHANGE
dotnet9	126,556	45.5%	+2.2%	+1.7pp
dotnet8	47,374	17.0%	+4.8%	+1.1pp
dotnet6	46,974	16.9%	-4.5%	-0.5pp
dotnet10	43,812	15.8%	-16.8%	-2.9pp
dotnet7	13,249	4.8%	+10.8%	+0.5pp

Share change is in percentage points against August 2026.

Ubuntu series detail

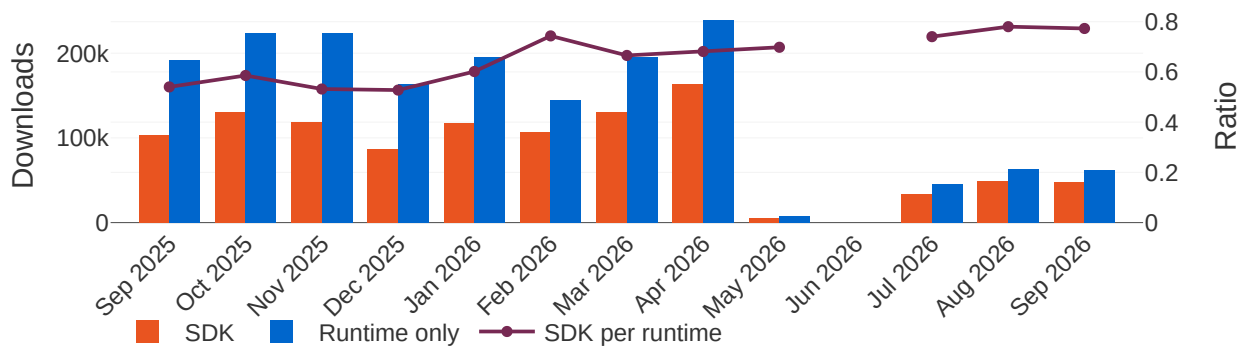

VALUE	DOWNLOADS	SHARE	AUGUST 2026	MOM
noble	103,145	37.1%	103,940	-0.8%
jammy	92,959	33.4%	99,348	-6.4%
resolute	81,861	29.5%	75,094	+9.0%

LTS series (jammy (22.04 LTS), noble (24.04 LTS)) account for 70.5% of the month, -1.3pp on August 2026.

Architecture detail

VALUE	DOWNLOADS	SHARE	AUGUST 2026	MOM
amd64	214,600	77.2%	213,988	+0.3%
arm64	50,054	18.0%	52,936	-5.4%
s390x	5,748	2.1%	6,880	-16.5%
ppc64el	5,637	2.0%	6,712	-16.0%
amd64v3	1,926	0.7%	2,375	-18.9%

Developer intent: SDK versus runtime-only downloads

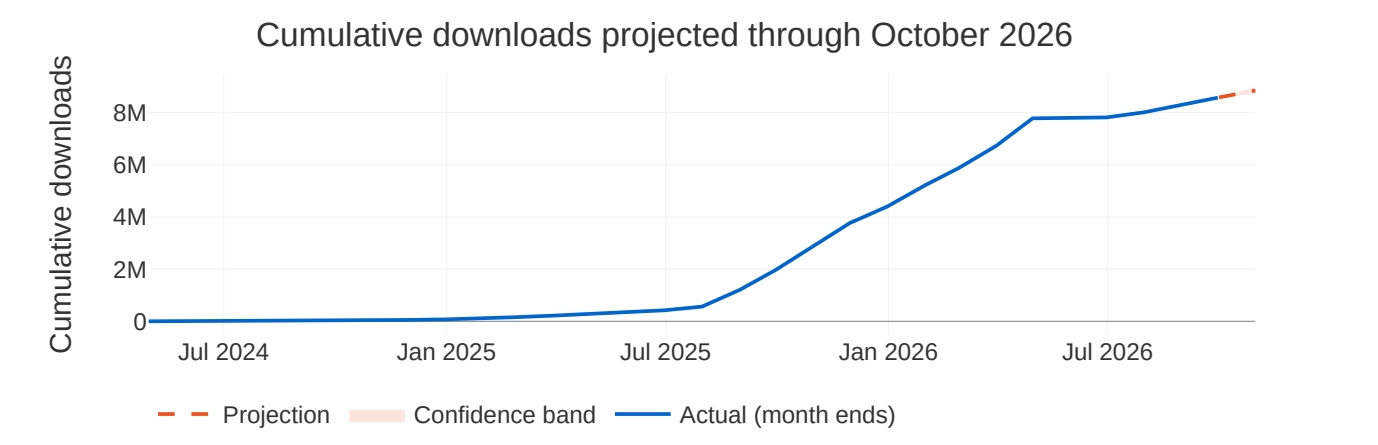

Top packages this month

PACKAGE	TYPE	DOWNLOADS	MOM
dotnet-runtime-9.0	runtime	11,086	+0.8%
aspnetcore-runtime-9.0	aspnetcore-runtime	10,946	+1.6%
dotnet-hostfxr-9.0	hostfxr	10,764	+0.9%
dotnet-sdk-9.0	sdk	10,324	+3.1%
dotnet-apphost-pack-9.0	apphost-pack	10,067	+3.8%
dotnet-targeting-pack-9.0	targeting-pack	9,969	+3.1%
aspnetcore-targeting-pack-9.0	targeting-pack	9,967	+3.2%
dotnet-templates-9.0	other	9,647	+4.0%
netstandard-targeting-pack-2.1-9.0	targeting-pack	9,600	+3.4%
dotnet-host-9.0	host	9,545	+4.4%

SDK downloads indicate development and build environments; runtime-only downloads indicate deployment targets. Neither is a count of people.

Trajectory & watch items

Where the trend is heading, and what needs a human explanation.

Projection fits the daily rate of the 60 days to 2026-09-30 and extrapolates linearly; it assumes no new release events. Indicative total for October 2026: **274,327** downloads.

Momentum by version

VERSION	DOWNLOADS IN MONTH	LAST 7D VS PRIOR 7D	LAST 30D VS PRIOR 30D	TREND (DL/DAY²)	EST. HALF-LIFE
dotnet6	46,974	+0.0%	-1.4%	-5.8	421 days
dotnet7	13,249	+26.0%	+15.2%	1.7	growing / stable
dotnet8	47,374	-4.3%	+7.4%	-19.9	growing / stable
dotnet9	126,556	+5.3%	+4.9%	-49.7	growing / stable
dotnet10	43,812	-9.1%	-14.0%	-22.4	78 days

Windows end on 2026-09-30. Days without data are treated as zero inside these windows, so a collection gap depresses the figures.

Days needing explanation

DATE	DOWNLOADS	ABOVE MONTH MEAN
2026-09-07	15,361	2.7σ
2026-09-08	15,059	2.6σ
2026-09-06	14,602	2.4σ

Days more than two standard deviations above the month's mean. Common causes are release publications, mirror synchronisation and CI bursts.

Data coverage

MEASURE	VALUE
Days in month	30
Days expected in window	30
Days with download counts	30
Coverage	100.0%
Missing days	0
Gaps	none
Month fully elapsed in dataset	yes
Publications active in month	1,008
Publications first seen in month	640
Collector last run	2026-10-02

A publication is one binary package version in one series and architecture. A burst of first-seen publications usually follows a release upload or a resumed collection window, not a change in demand.

Methodology & limitations

Figures count package downloads recorded by Launchpad for the dotnet/backports PPA only.

The primary Ubuntu archive publishes no download telemetry, so packages installed from it are not represented here. This report is a directional indicator, not total .NET usage on Ubuntu.

Downloads are not users. CI/CD pipelines, container image builds, mirrors and repeated installations all inflate counts, and one developer may generate many downloads.

Counts are deduplicated per publication and day, keeping the maximum value reported by Launchpad; recent days may still rise as Launchpad reporting settles.

Debug-symbol packages are excluded from every figure in this report.

No data is collected for any other programming language, so this report makes no cross-language comparison.

Source: Launchpad download counts for Backports PPA. Collected by scripts/collect.py; figures reproducible from data/downloads.json for month 2026-09.
