

.NET on Ubuntu — December 2024

Package download statistics for the dotnet/backports PPA on Launchpad.

Reporting period	December 2024 (2024-12-01 to 2024-12-31, UTC)
Data window	2024-04-26 to 2026-07-31
Generated	2026-08-03 00:40:07 UTC
Origin	Backports PPA
Scope	dotnet6, dotnet7, dotnet8, dotnet9, dotnet10 · all Ubuntu series and architectures · debug-symbol packages excluded

At a glance

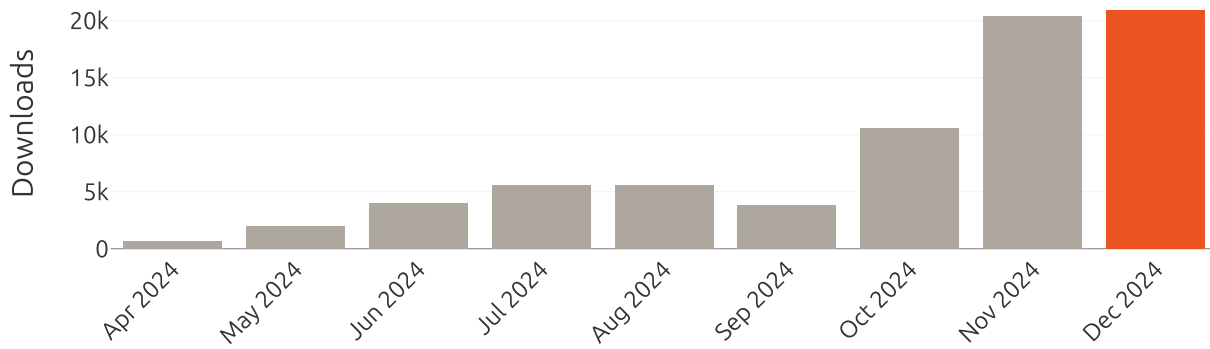

Headline volume and the month's most material movements.

Downloads in month 20,879 vs November 2024: +2.2%	Average per day 696 over 30 days with data	Year on year n/a no comparable month	Peak day 3,660 2024-12-03
Leading version dotnet9 71.3% of the month · 3 active versions	Newest version share 71.3% dotnet9 · +11.3pp	SDK per runtime download 0.46 developer-intent proxy · +2.3%	Lifetime to month end 73,450 cumulative since 2024-04-26

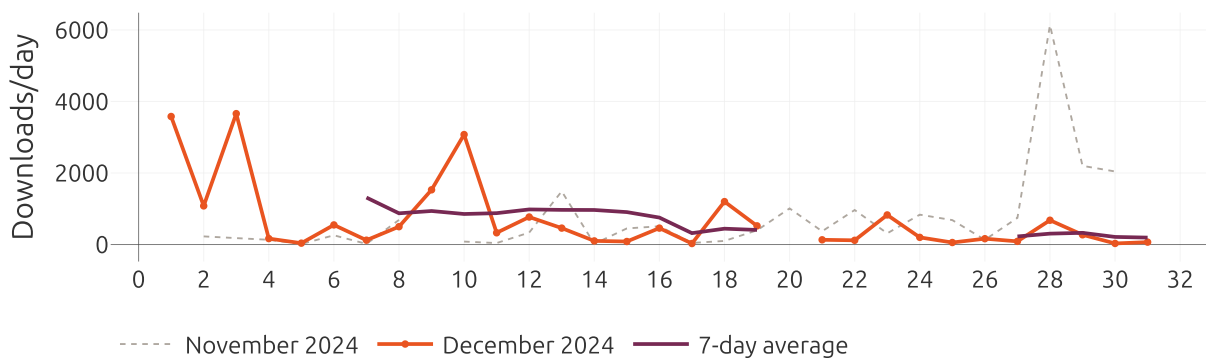

Key findings

20,879 downloads in December 2024 (696/day), broadly flat, +2.2% against November 2024.
Adoption of dotnet9 is accelerating: 71.3% of the month's volume, +11.3pp on November 2024 (+21.5% in absolute terms).
dotnet6 is being displaced: 20.5% of volume, -9.9pp on November 2024 — consistent with migration to newer releases.
Every runtime-only download came with 0.46 SDK downloads (2,094 SDK vs 4,545 runtime) — a proxy for developer-side rather than deployment-side pull.
Ubuntu noble takes 70.8% of the month's downloads; LTS releases account for 100.0% in total.

Monthly downloads, last 9 months

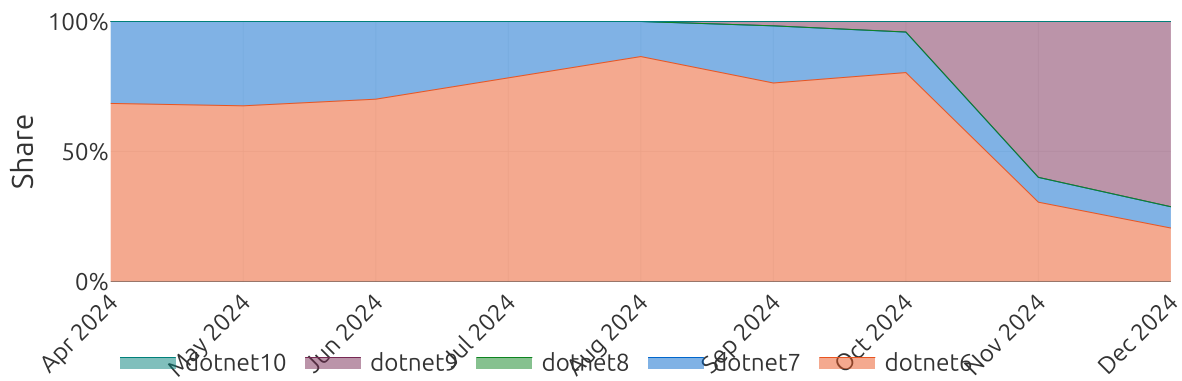

Daily downloads through the month (day of month on x axis)

Composition & adoption

Which .NET releases, Ubuntu series and architectures the downloads came from, and how the mix moved.

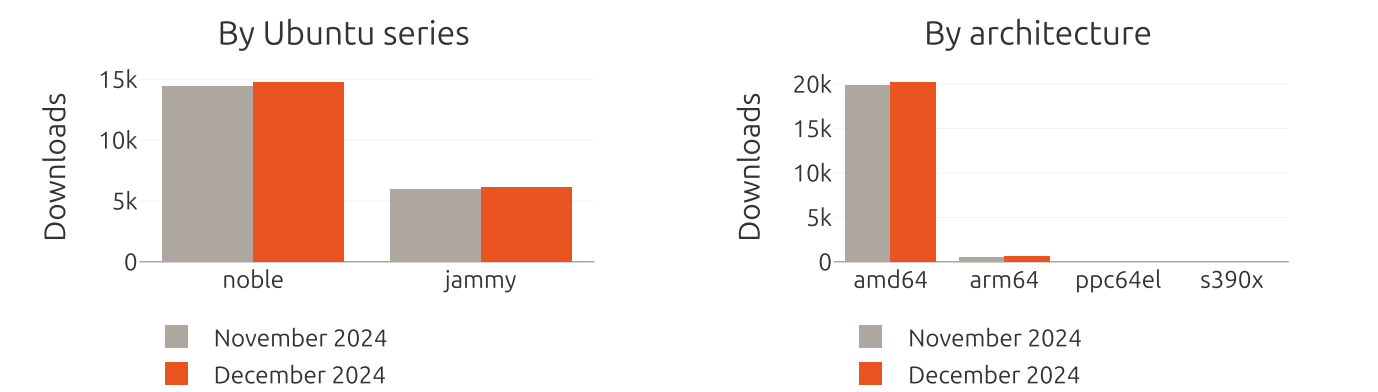

Share of downloads by .NET version

Version detail

VERSION	DOWNLOADS	SHARE	MOM	SHARE CHANGE
dotnet9	14,880	71.3%	+21.5%	+11.3pp
dotnet6	4,290	20.5%	-31.1%	-9.9pp
dotnet7	1,709	8.2%	-12.4%	-1.4pp

Share change is in percentage points against November 2024.

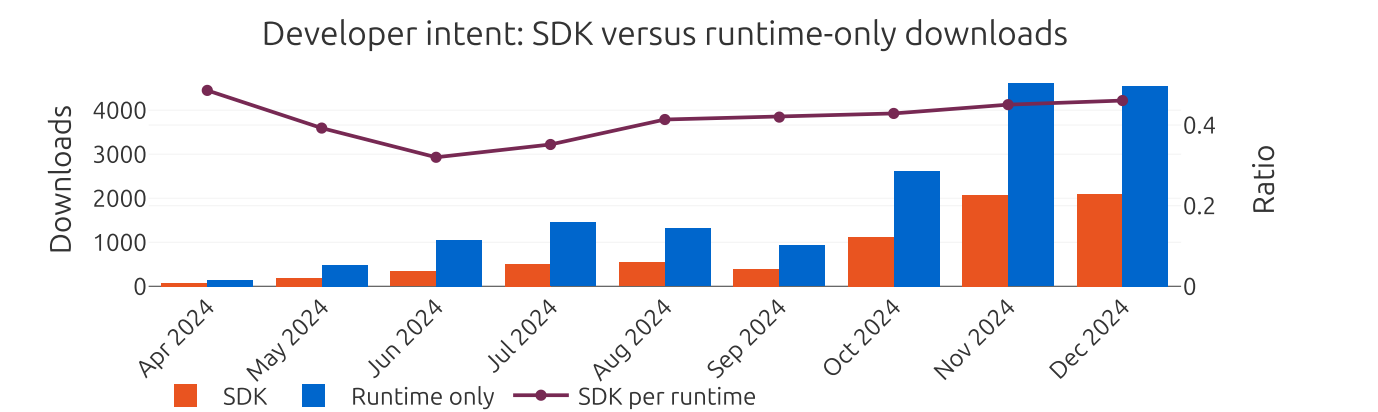

Ubuntu series detail

VALUE	DOWNLOADS	SHARE	NOVEMBER 2024	MOM
noble	14,790	70.8%	14,457	+2.3%
jammy	6,089	29.2%	5,965	+2.1%

LTS series (jammy (22.04 LTS), noble (24.04 LTS)) account for 100.0% of the month, +0.0pp on November 2024.

Architecture detail

VALUE	DOWNLOADS	SHARE	NOVEMBER 2024	MOM
amd64	20,252	97.0%	19,880	+1.9%
arm64	627	3.0%	498	+25.9%

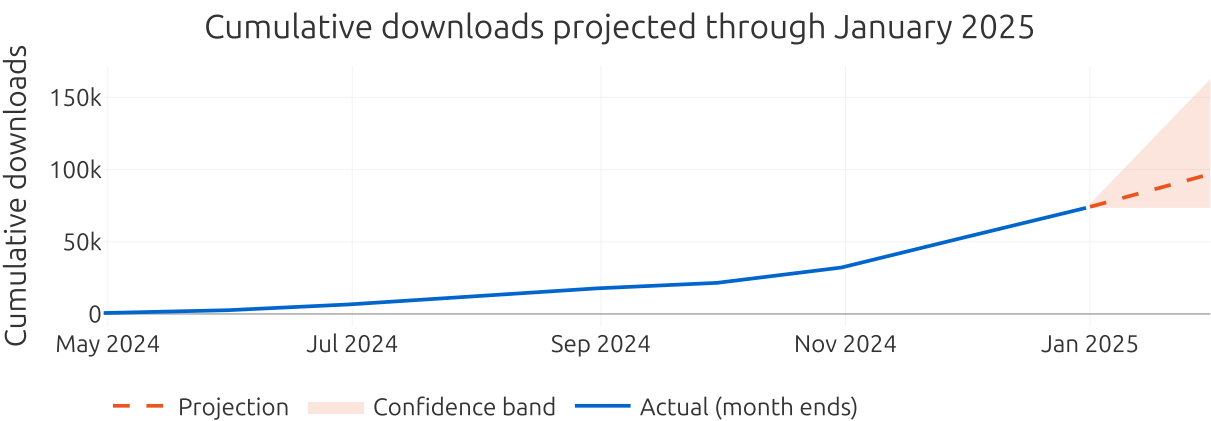

Top packages this month

PACKAGE	TYPE	DOWNLOADS	MOM
dotnet-host-9.0	host	1,568	+22.5%
dotnet-runtime-9.0	runtime	1,565	+22.1%
dotnet-hostfxr-9.0	hostfxr	1,564	+22.4%
aspnetcore-runtime-9.0	aspnetcore-runtime	1,528	+23.8%
netstandard-targeting-pack-2.1-9.0	targeting-pack	1,438	+20.6%
dotnet-sdk-9.0	sdk	1,432	+19.7%
aspnetcore-targeting-pack-9.0	targeting-pack	1,425	+21.5%
dotnet-apphost-pack-9.0	apphost-pack	1,423	+21.1%
dotnet-templates-9.0	other	1,423	+21.6%
dotnet-targeting-pack-9.0	targeting-pack	1,422	+21.3%

SDK downloads indicate development and build environments; runtime-only downloads indicate deployment targets. Neither is a count of people.

Trajectory & watch items

Where the trend is heading, and what needs a human explanation.

Projection fits the daily rate of the 60 days to 2024-12-31 and extrapolates linearly; it assumes no new release events. Indicative total for January 2025: 23,440 downloads.

Momentum by version

VERSION	DOWNLOADS IN MONTH	LAST 7D VS PRIOR 7D	LAST 30D VS PRIOR 30D	TREND (DL/DAY²)	EST. HALF-LIFE
dotnet6	4,290	-64.4%	-61.3%	-13.7	12 days
dotnet7	1,709	-78.5%	-30.5%	-2.9	31 days
dotnet9	14,880	-44.8%	-9.8%	-38.2	27 days

Windows end on 2024-12-31. Days without data are treated as zero inside these windows, so a collection gap depresses the figures.

Days needing explanation

DATE	DOWNLOADS	ABOVE MONTH MEAN
2024-12-03	3,660	2.9σ
2024-12-01	3,580	2.9σ
2024-12-10	3,075	2.4σ

Days more than two standard deviations above the month's mean. Common causes are release publications, mirror synchronisation and CI bursts.

Data coverage

MEASURE	VALUE
Days in month	31
Days expected in window	31
Days with download counts	30
Coverage	96.8%
Missing days	1
Gaps	2024-12-20
Month fully elapsed in dataset	yes
Publications active in month	128
Publications first seen in month	50
Collector last run	2026-07-31

A publication is one binary package version in one series and architecture. A burst of first-seen publications usually follows a release upload or a resumed collection window, not a change in demand.

Methodology & limitations

Figures count package downloads recorded by Launchpad for the dotnet/backports PPA only.

The primary Ubuntu archive publishes no download telemetry, so packages installed from it are not represented here. This report is a directional indicator, not total .NET usage on Ubuntu.

Downloads are not users. CI/CD pipelines, container image builds, mirrors and repeated installations all inflate counts, and one developer may generate many downloads.

Counts are deduplicated per publication and day, keeping the maximum value reported by Launchpad; recent days may still rise as Launchpad reporting settles.

Debug-symbol packages are excluded from every figure in this report.

No data is collected for any other programming language, so this report makes no cross-language comparison.

Source: Launchpad download counts for Backports PPA. Collected by `scripts/collect.py`; figures reproducible from `data/downloads.json` for month 2024-12.
