

.NET on Ubuntu — July 2024

Package download statistics for the dotnet/backports PPA on Launchpad.

Reporting period	July 2024 (2024-07-01 to 2024-07-31, UTC)
Data window	2024-04-26 to 2026-07-31
Generated	2026-08-03 00:39:52 UTC
Origin	Backports PPA
Scope	dotnet6, dotnet7, dotnet8, dotnet9, dotnet10 · all Ubuntu series and architectures · debug-symbol packages excluded

At a glance

Headline volume and the month's most material movements.

 **Partial month.** 29 of 31 days carry download counts (94%). Totals understate actual volume.

Downloads in month 5,602 vs June 2024: +41.8%	Average per day 193 over 29 days with data	Year on year n/a no comparable month	Peak day 736 2024-07-25
Leading version dotnet6 78.2% of the month · 2 active versions	Newest version share 21.8% dotnet7 · -8.1pp	SDK per runtime download 0.35 developer-intent proxy · +9.9%	Lifetime to month end 12,152 cumulative since 2024-04-26

Key findings

Data covers 29 of 31 days (94%); 2 day(s) are missing, so monthly totals understate actual volume and month-on-month comparisons are not like for like.

5,602 downloads in July 2024 (193/day), up +41.8% against June 2024.

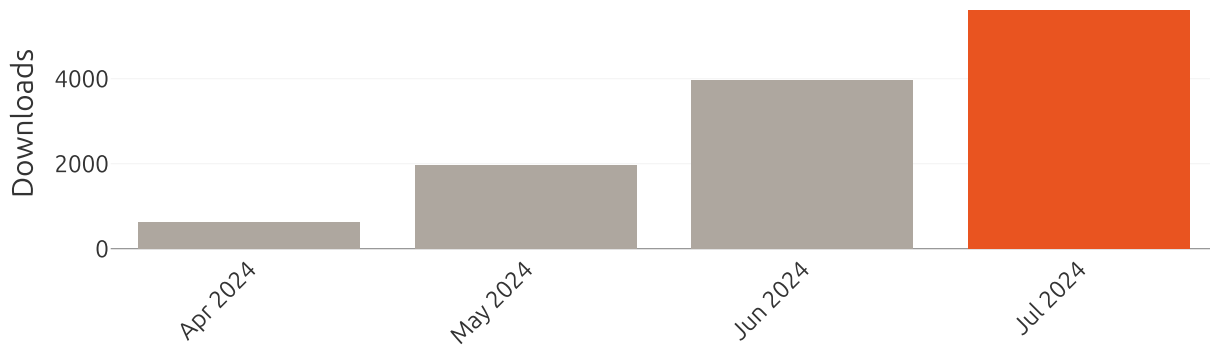

dotnet7 lost share this month, down to 21.8% (-8.1pp).

dotnet7 is being displaced: 21.8% of volume, -8.1pp on June 2024 — consistent with migration to newer releases.

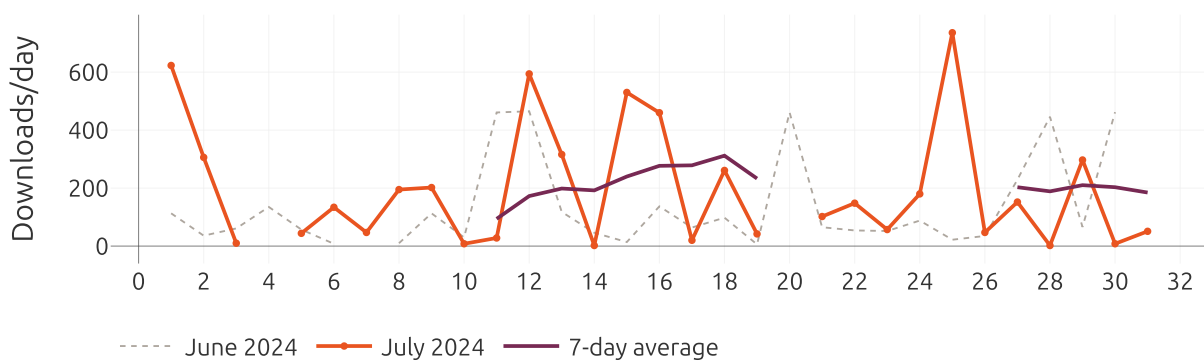

dotnet6 remains the most downloaded release at 78.2% of the month, across 2 active .NET versions.

Every runtime-only download came with 0.35 SDK downloads (509 SDK vs 1,447 runtime) — a proxy for developer-side rather than deployment-side pull.

Monthly downloads, last 4 months

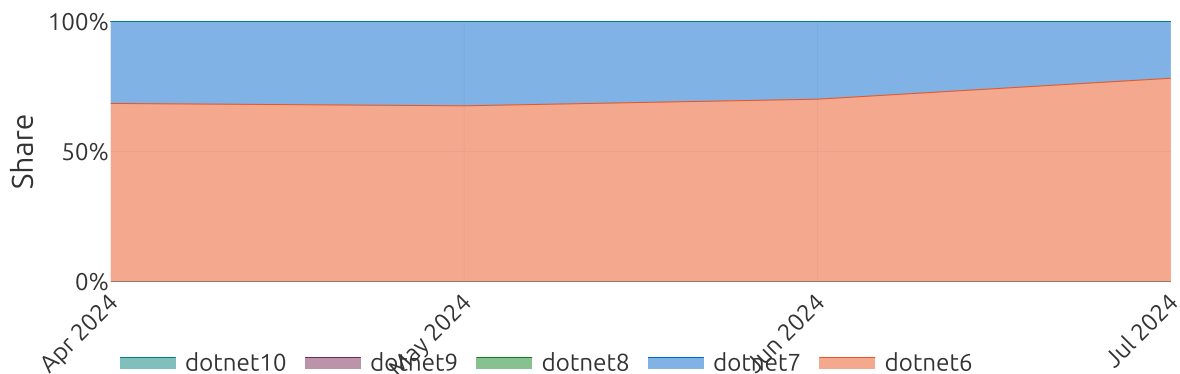

Daily downloads through the month (day of month on x axis)

Composition & adoption

Which .NET releases, Ubuntu series and architectures the downloads came from, and how the mix moved.

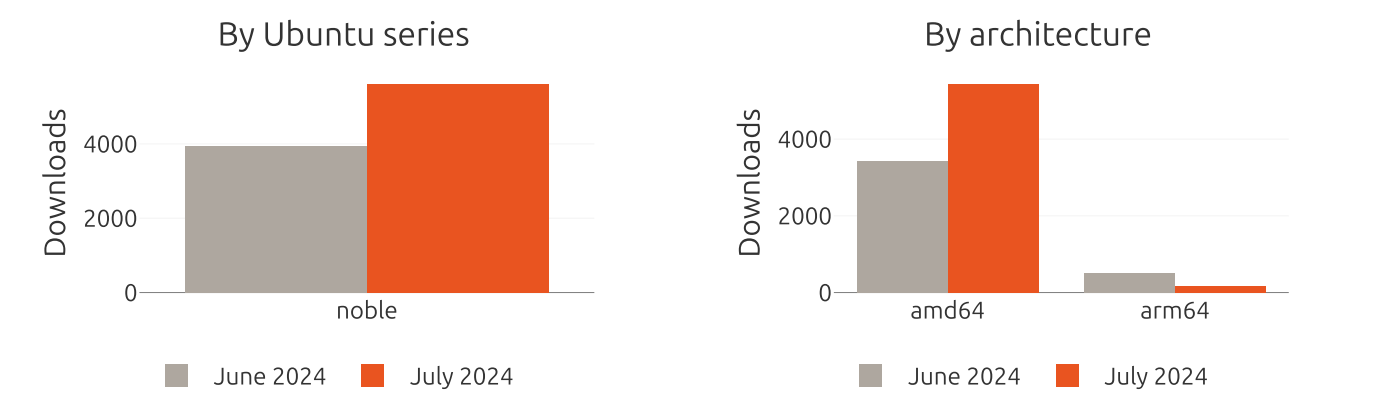

Share of downloads by .NET version

Version detail

VERSION	DOWNLOADS	SHARE	MOM	SHARE CHANGE
dotnet6	4,379	78.2%	+58.0%	+8.1pp
dotnet7	1,223	21.8%	+3.6%	-8.1pp

Share change is in percentage points against June 2024.

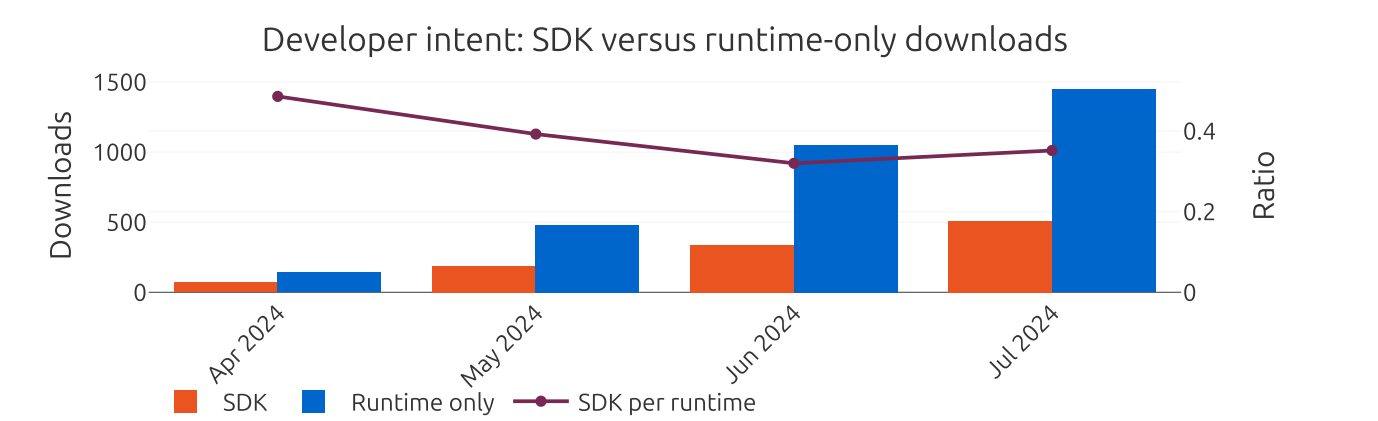

Ubuntu series detail

VALUE	DOWNLOADS	SHARE	JUNE 2024	MOM
noble	5,602	100.0%	3,952	+41.8%

LTS series (jammy (22.04 LTS), noble (24.04 LTS)) account for 100.0% of the month, +0.0pp on June 2024.

Architecture detail

VALUE	DOWNLOADS	SHARE	JUNE 2024	MOM
amd64	5,427	96.9%	3,434	+58.0%
arm64	175	3.1%	518	-66.2%

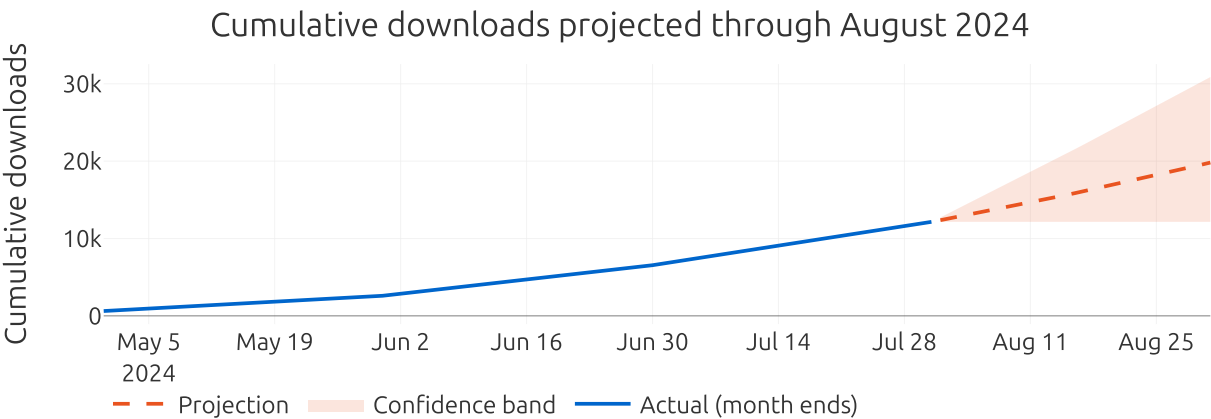

Top packages this month

PACKAGE	TYPE	DOWNLOADS	MOM
dotnet-hostfxr-6.0	hostfxr	611	+58.7%
dotnet-runtime-6.0	runtime	610	+58.9%
aspnetcore-runtime-6.0	aspnetcore-runtime	529	+57.9%
aspnetcore-targeting-pack-6.0	targeting-pack	406	+55.0%
dotnet-targeting-pack-6.0	targeting-pack	406	+54.4%
dotnet-apphost-pack-6.0	apphost-pack	404	+59.1%
dotnet-templates-6.0	other	393	+58.5%
dotnet-sdk-6.0	sdk	390	+59.2%
dotnet-host	host	367	+60.3%
netstandard-targeting-pack-2.1	targeting-pack	238	+54.5%

SDK downloads indicate development and build environments; runtime-only downloads indicate deployment targets. Neither is a count of people.

Trajectory & watch items

Where the trend is heading, and what needs a human explanation.

Projection fits the daily rate of the 60 days to 2024-07-31 and extrapolates linearly; it assumes no new release events. Indicative total for August 2024: 7,665 downloads.

Momentum by version

VERSION	DOWNLOADS IN MONTH	LAST 7D VS PRIOR 7D	LAST 30D VS PRIOR 30D	TREND (DL/DAY²)	EST. HALF-LIFE
dotnet6	4,379	+58.6%	+23.4%	-1.4	growing / stable
dotnet7	1,223	+82.0%	-17.6%	-0.9	64 days

Windows end on 2024-07-31. Days without data are treated as zero inside these windows, so a collection gap depresses the figures.

Days needing explanation

DATE	DOWNLOADS	ABOVE MONTH MEAN
2024-07-25	736	2.6σ
2024-07-01	623	2.0σ

Days more than two standard deviations above the month's mean. Common causes are release publications, mirror synchronisation and CI bursts.

Data coverage

MEASURE	VALUE
Days in month	31
Days expected in window	31
Days with download counts	29
Coverage	93.5%
Missing days	2
Gaps	2024-07-04, 2024-07-20
Month fully elapsed in dataset	yes
Publications active in month	67
Publications first seen in month	21
Collector last run	2026-07-31

A publication is one binary package version in one series and architecture. A burst of first-seen publications usually follows a release upload or a resumed collection window, not a change in demand.

Methodology & limitations

Figures count package downloads recorded by Launchpad for the dotnet/backports PPA only.

The primary Ubuntu archive publishes no download telemetry, so packages installed from it are not represented here. This report is a directional indicator, not total .NET usage on Ubuntu.

Downloads are not users. CI/CD pipelines, container image builds, mirrors and repeated installations all inflate counts, and one developer may generate many downloads.

Counts are deduplicated per publication and day, keeping the maximum value reported by Launchpad; recent days may still rise as Launchpad reporting settles.

Debug-symbol packages are excluded from every figure in this report.

No data is collected for any other programming language, so this report makes no cross-language comparison.

Source: Launchpad download counts for Backports PPA. Collected by scripts/collect.py; figures reproducible from data/downloads.json for month 2024-07.
