

# .NET on Ubuntu — June 2024

Package download statistics for the dotnet/backports PPA on Launchpad.

|                  |                                                                                                                     |
|------------------|---------------------------------------------------------------------------------------------------------------------|
| Reporting period | June 2024 (2024-06-01 to 2024-06-30, UTC)                                                                           |
| Data window      | 2024-04-26 to 2026-07-31                                                                                            |
| Generated        | 2026-08-03 00:39:49 UTC                                                                                             |
| Origin           | Backports PPA                                                                                                       |
| Scope            | dotnet6, dotnet7, dotnet8, dotnet9, dotnet10 · all Ubuntu series and architectures · debug-symbol packages excluded |

## At a glance

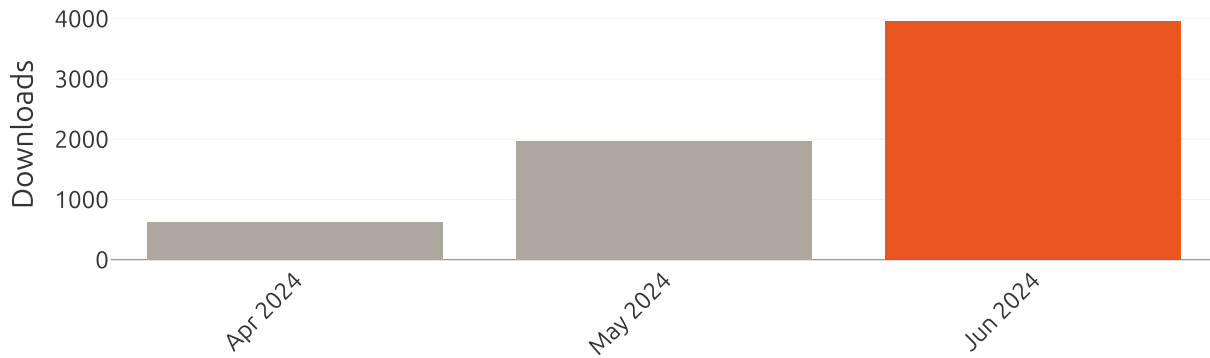

Headline volume and the month's most material movements.

|                                                                                                 |                                                                              |                                                                                                |                                                                                          |

## Key findings

|                                                                                                                                                       |
|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3,952 downloads in June 2024 (136/day), up +100.3% against May 2024.                                                                                  |
| dotnet6 remains the most downloaded release at 70.1% of the month, across 2 active .NET versions.                                                     |
| Every runtime-only download came with 0.32 SDK downloads (336 SDK vs 1,050 runtime), -18.5% on May 2024 — the mix shifted towards deployment targets. |
| arm64 is now 13.1% of downloads (+10.1pp on May 2024).                                                                                                |
| Linear extrapolation of the last 60 days projects roughly 5,570 downloads in July 2024 (+40.9% on June 2024).                                         |

Monthly downloads, last 3 months

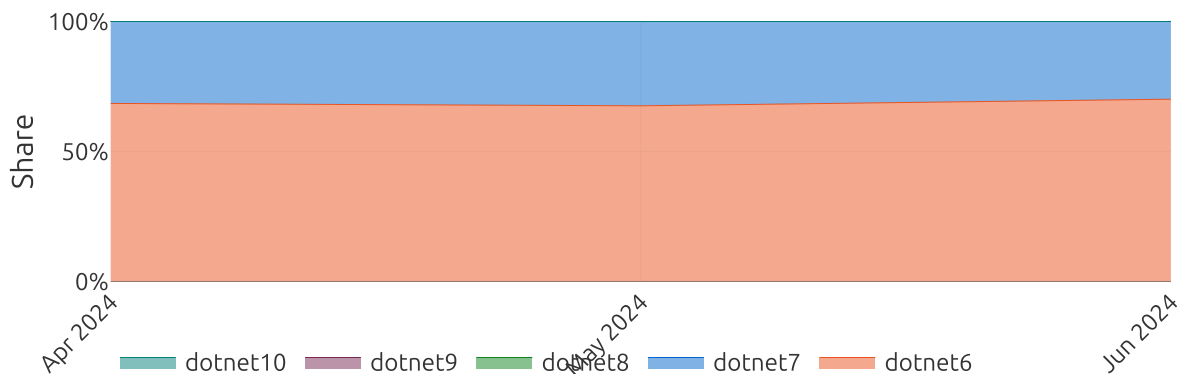

Daily downloads through the month (day of month on x axis)

## Composition & adoption

Which .NET releases, Ubuntu series and architectures the downloads came from, and how the mix moved.

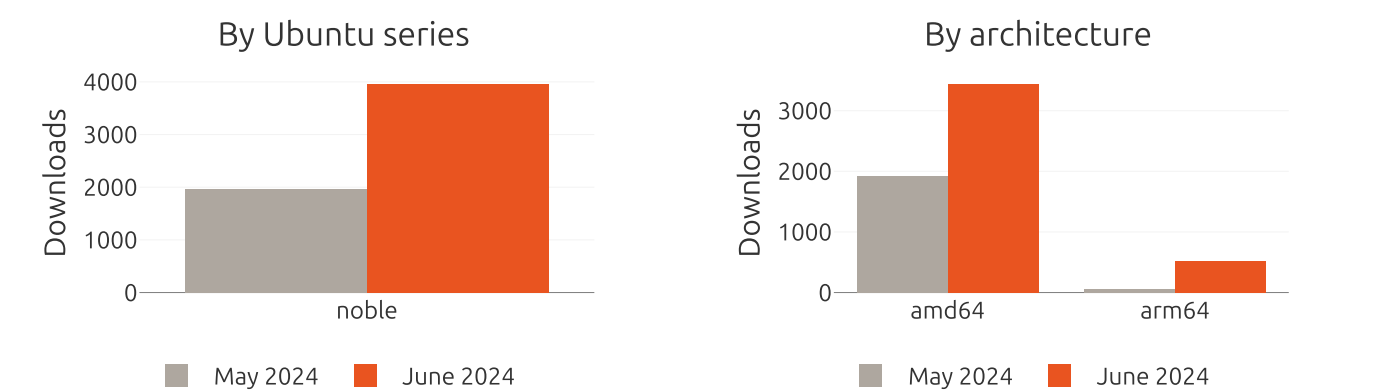

Share of downloads by .NET version

Version detail

| VERSION | DOWNLOADS | SHARE | MOM     | SHARE CHANGE |
|---------|-----------|-------|---------|--------------|
| dotnet6 | 2,771     | 70.1% | +107.9% | +2.6pp       |
| dotnet7 | 1,181     | 29.9% | +84.5%  | -2.6pp       |

Share change is in percentage points against May 2024.

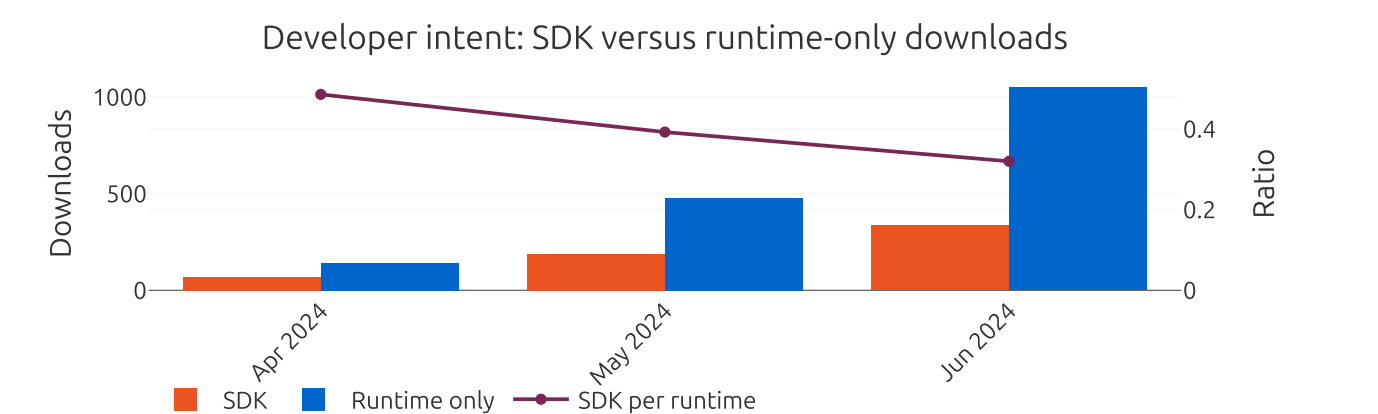

Ubuntu series detail

| VALUE | DOWNLOADS | SHARE  | MAY 2024 | MOM     |
|-------|-----------|--------|----------|---------|
| noble | 3,952     | 100.0% | 1,973    | +100.3% |

LTS series (jammy (22.04 LTS), noble (24.04 LTS)) account for 100.0% of the month, +0.0pp on May 2024.

Architecture detail

| VALUE | DOWNLOADS | SHARE | MAY 2024 | MOM     |
|-------|-----------|-------|----------|---------|
| amd64 | 3,434     | 86.9% | 1,914    | +79.4%  |
| arm64 | 518       | 13.1% | 59       | +778.0% |

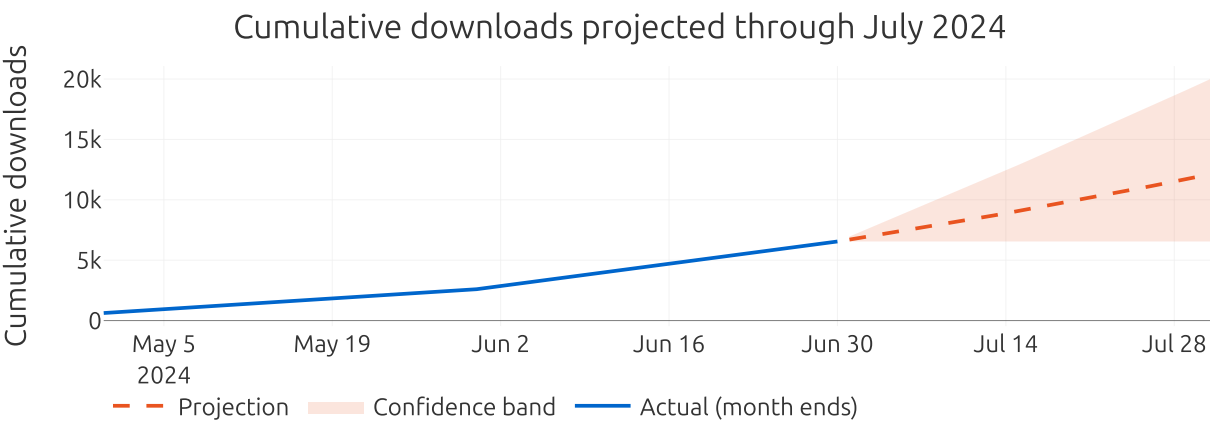

Top packages this month

| PACKAGE                       | TYPE               | DOWNLOADS | MOM     |
|-------------------------------|--------------------|-----------|---------|
| dotnet-hostfxr-6.0            | hostfxr            | 385       | +136.2% |
| dotnet-runtime-6.0            | runtime            | 384       | +134.1% |
| aspnetcore-runtime-6.0        | aspnetcore-runtime | 335       | +119.0% |
| dotnet-targeting-pack-6.0     | targeting-pack     | 263       | +87.9%  |
| aspnetcore-targeting-pack-6.0 | targeting-pack     | 262       | +87.1%  |
| dotnet-apphost-pack-6.0       | apphost-pack       | 254       | +82.7%  |
| dotnet-templates-6.0          | other              | 248       | +95.3%  |
| dotnet-sdk-6.0                | sdk                | 245       | +94.4%  |
| dotnet-host                   | host               | 229       | +182.7% |
| dotnet-runtime-7.0            | runtime            | 224       | +160.5% |

SDK downloads indicate development and build environments; runtime-only downloads indicate deployment targets. Neither is a count of people.

Trajectory & watch items

Where the trend is heading, and what needs a human explanation.

Projection fits the daily rate of the 60 days to 2024-06-30 and extrapolates linearly; it assumes no new release events. Indicative total for July 2024: 5,570 downloads.

Momentum by version

| VERSION | DOWNLOADS IN MONTH | LAST 7D VS PRIOR 7D | LAST 30D VS PRIOR 30D | TREND (DL/DAY <sup>2</sup> ) | EST. HALF-LIFE   |
|---------|--------------------|---------------------|-----------------------|------------------------------|------------------|
| dotnet6 | 2,771              | +77.7%              | +110.6%               | 3.7                          | growing / stable |
| dotnet7 | 1,181              | +48.2%              | +84.5%                | 1.0                          | growing / stable |

Windows end on 2024-06-30. Days without data are treated as zero inside these windows, so a collection gap depresses the figures.

Days needing explanation

| DATE       | DOWNLOADS | ABOVE MONTH MEAN |
|------------|-----------|------------------|
| 2024-06-12 | 465       | 2.1σ             |
| 2024-06-30 | 462       | 2.1σ             |
| 2024-06-11 | 461       | 2.1σ             |
| 2024-06-20 | 461       | 2.1σ             |

Days more than two standard deviations above the month's mean. Common causes are release publications, mirror synchronisation and CI bursts.

Data coverage

| MEASURE                          | VALUE      |
|----------------------------------|------------|
| Days in month                    | 30         |
| Days expected in window          | 30         |
| Days with download counts        | 29         |
| Coverage                         | 96.7%      |
| Missing days                     | 1          |
| Gaps                             | 2024-06-07 |
| Month fully elapsed in dataset   | yes        |
| Publications active in month     | 67         |
| Publications first seen in month | 37         |
| Collector last run               | 2026-07-31 |

A publication is one binary package version in one series and architecture. A burst of first-seen publications usually follows a release upload or a resumed collection window, not a change in demand.

Methodology & limitations

Figures count package downloads recorded by Launchpad for the dotnet/backports PPA only.

The primary Ubuntu archive publishes no download telemetry, so packages installed from it are not represented here. This report is a directional indicator, not total .NET usage on Ubuntu.

Downloads are not users. CI/CD pipelines, container image builds, mirrors and repeated installations all inflate counts, and one developer may generate many downloads.

Counts are deduplicated per publication and day, keeping the maximum value reported by Launchpad; recent days may still rise as Launchpad reporting settles.

Debug-symbol packages are excluded from every figure in this report.

No data is collected for any other programming language, so this report makes no cross-language comparison.

Source: Launchpad download counts for Backports PPA. Collected by `scripts/collect.py`; figures reproducible from `data/downloads.json` for month 2024-06.
