

.NET on Ubuntu — April 2025

Package download statistics for the dotnet/backports PPA on Launchpad.

Reporting period	April 2025 (2025-04-01 to 2025-04-30, UTC)
Data window	2024-04-26 to 2026-07-31
Generated	2026-08-03 00:40:19 UTC
Origin	Backports PPA
Scope	dotnet6, dotnet7, dotnet8, dotnet9, dotnet10 · all Ubuntu series and architectures · debug-symbol packages excluded

At a glance

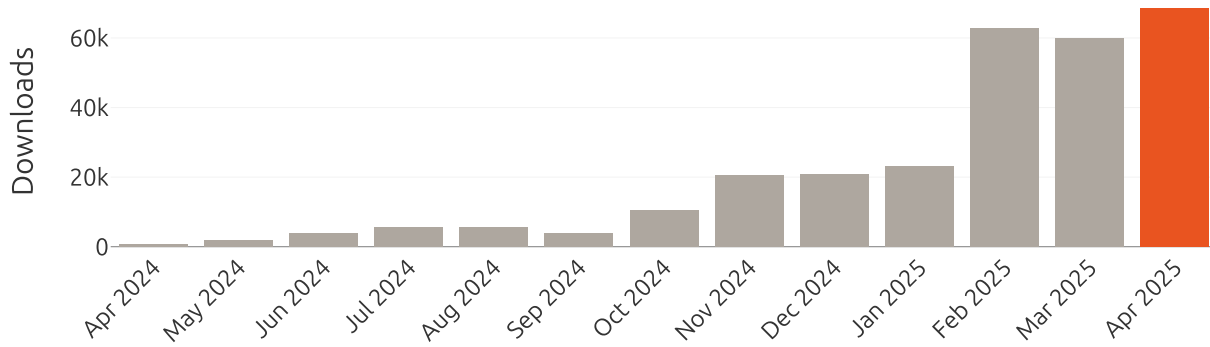

Headline volume and the month's most material movements.

Downloads in month 68,440 vs March 2025: +14.4%	Average per day 2,281 over 30 days with data	Year on year 110× vs April 2024 (625)	Peak day 9,477 2025-04-02
Leading version dotnet9 89.3% of the month · 3 active versions	Newest version share 89.3% dotnet9 · -0.3pp	SDK per runtime download 0.81 developer-intent proxy · +7.7%	Lifetime to month end 287,564 cumulative since 2024-04-26

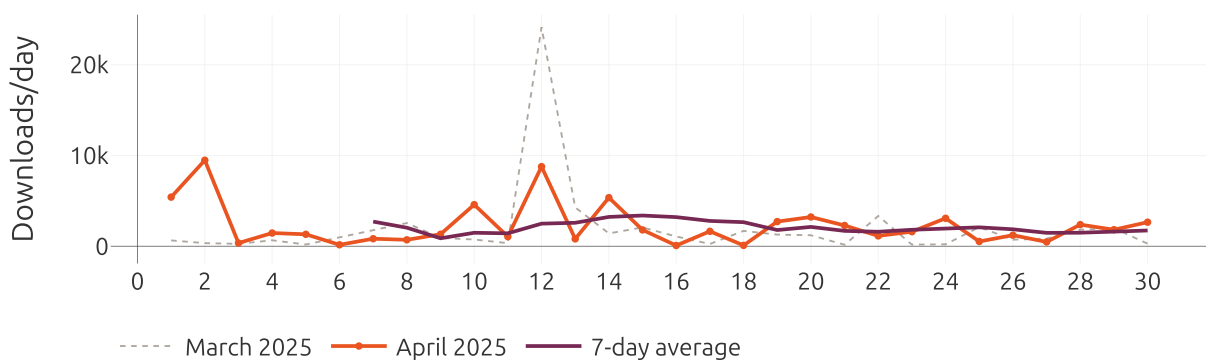

Key findings

Unusual spike on 2025-04-02 (9,477 downloads, 3.1σ above the month's mean) — worth confirming the cause before quoting the monthly total.
68,440 downloads in April 2025 (2,281/day), up +14.4% against March 2025.
Every runtime-only download came with 0.81 SDK downloads (11,161 SDK vs 13,713 runtime) — a proxy for developer-side rather than deployment-side pull.
Ubuntu noble takes 62.4% of the month's downloads; LTS releases account for 100.0% in total.
Linear extrapolation of the last 60 days projects roughly 60,143 downloads in May 2025 (-12.1% on April 2025).

Monthly downloads, last 13 months

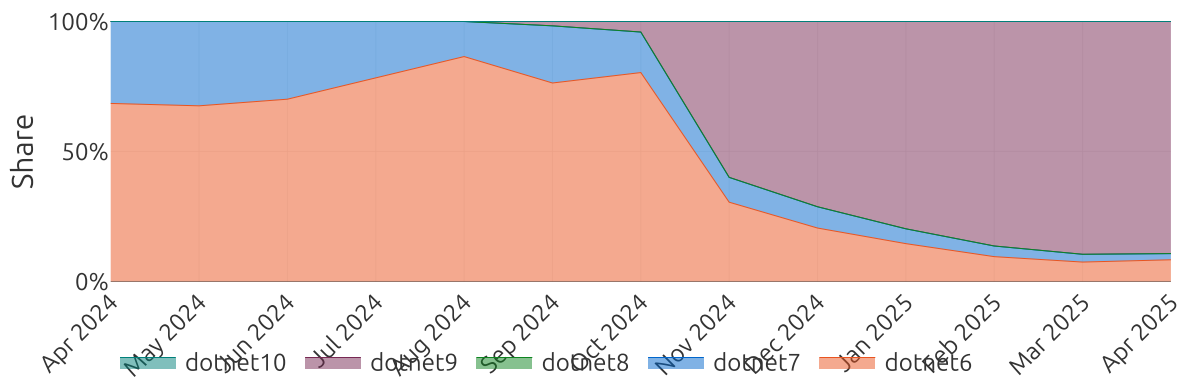

Daily downloads through the month (day of month on x axis)

Composition & adoption

Which .NET releases, Ubuntu series and architectures the downloads came from, and how the mix moved.

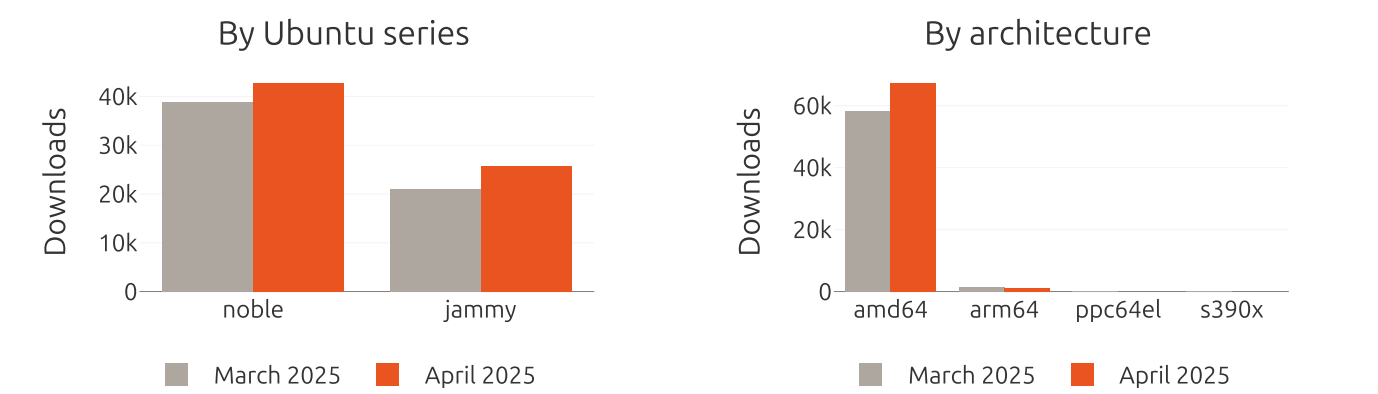

Share of downloads by .NET version

Version detail

VERSION	DOWNLOADS	SHARE	MOM	SHARE CHANGE
dotnet9	61,102	89.3%	+14.0%	-0.3pp
dotnet6	5,709	8.3%	+27.9%	+0.9pp
dotnet7	1,629	2.4%	-9.1%	-0.6pp

Share change is in percentage points against March 2025.

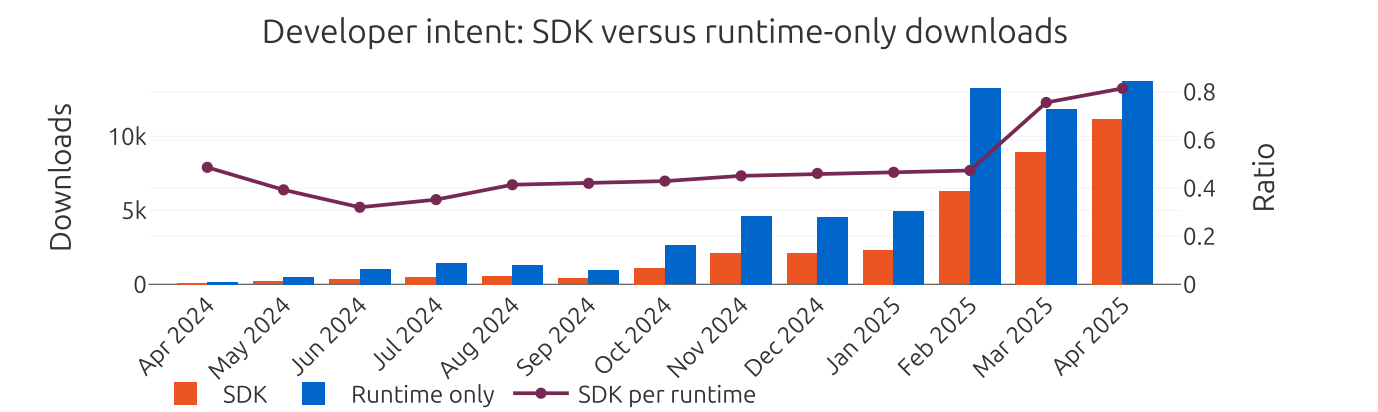

Ubuntu series detail

VALUE	DOWNLOADS	SHARE	MARCH 2025	MOM
noble	42,688	62.4%	38,788	+10.1%
jammy	25,752	37.6%	21,046	+22.4%

LTS series (jammy (22.04 LTS), noble (24.04 LTS)) account for 100.0% of the month, +0.0pp on March 2025.

Architecture detail

VALUE	DOWNLOADS	SHARE	MARCH 2025	MOM
amd64	67,215	98.2%	58,316	+15.3%
arm64	1,225	1.8%	1,458	-16.0%

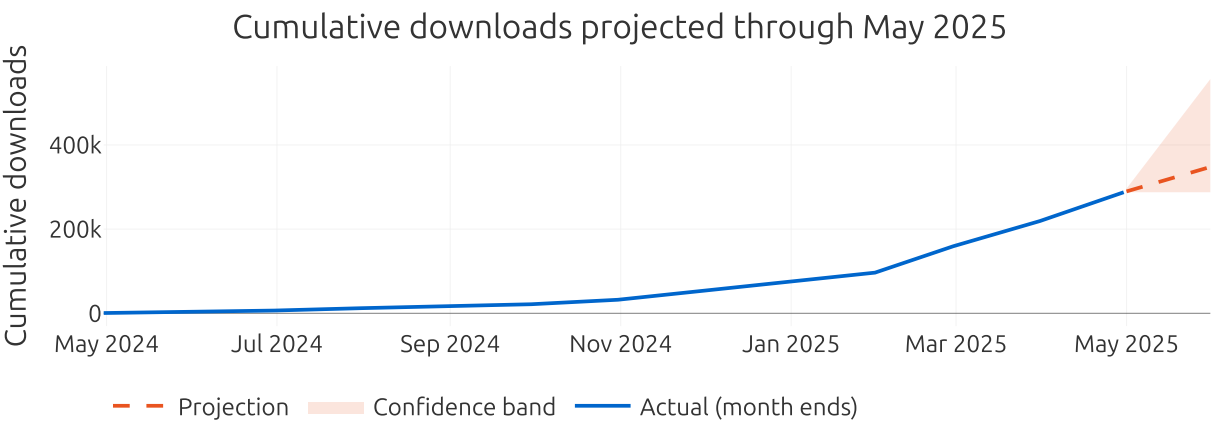

Top packages this month

PACKAGE	TYPE	DOWNLOADS	MOM
dotnet-host-9.0	host	6,047	+14.6%
dotnet-hostfxr-9.0	hostfxr	5,999	+15.2%
dotnet-runtime-9.0	runtime	5,978	+15.1%
aspnetcore-runtime-9.0	aspnetcore-runtime	5,879	+15.2%
netstandard-targeting-pack-2.1-9.0	targeting-pack	5,360	+9.7%
dotnet-templates-9.0	other	5,311	+9.2%
aspnetcore-targeting-pack-9.0	targeting-pack	5,309	+9.8%
dotnet-apphost-pack-9.0	apphost-pack	5,306	+9.9%
dotnet-targeting-pack-9.0	targeting-pack	5,302	+9.9%
dotnet-sdk-9.0	sdk	5,277	+10.7%

SDK downloads indicate development and build environments; runtime-only downloads indicate deployment targets. Neither is a count of people.

Trajectory & watch items

Where the trend is heading, and what needs a human explanation.

Projection fits the daily rate of the 60 days to 2025-04-30 and extrapolates linearly; it assumes no new release events. Indicative total for May 2025: 60,143 downloads.

Momentum by version

VERSION	DOWNLOADS IN MONTH	LAST 7D VS PRIOR 7D	LAST 30D VS PRIOR 30D	TREND (DL/DAY²)	EST. HALF-LIFE
dotnet6	5,709	-32.5%	+29.4%	-5.4	growing / stable
dotnet7	1,629	+96.3%	-8.2%	-1.0	51 days
dotnet9	61,102	-3.0%	+15.3%	-53.5	growing / stable

Windows end on 2025-04-30. Days without data are treated as zero inside these windows, so a collection gap depresses the figures.

Days needing explanation

DATE	DOWNLOADS	ABOVE MONTH MEAN
2025-04-02	9,477	3.1σ
2025-04-12	8,775	2.8σ

Days more than two standard deviations above the month's mean. Common causes are release publications, mirror synchronisation and CI bursts.

Data coverage

MEASURE	VALUE
Days in month	30
Days expected in window	30
Days with download counts	30
Coverage	100.0%
Missing days	0
Gaps	none
Month fully elapsed in dataset	yes
Publications active in month	150
Publications first seen in month	56
Collector last run	2026-07-31

A publication is one binary package version in one series and architecture. A burst of first-seen publications usually follows a release upload or a resumed collection window, not a change in demand.

Methodology & limitations

Figures count package downloads recorded by Launchpad for the dotnet/backports PPA only.

The primary Ubuntu archive publishes no download telemetry, so packages installed from it are not represented here. This report is a directional indicator, not total .NET usage on Ubuntu.

Downloads are not users. CI/CD pipelines, container image builds, mirrors and repeated installations all inflate counts, and one developer may generate many downloads.

Counts are deduplicated per publication and day, keeping the maximum value reported by Launchpad; recent days may still rise as Launchpad reporting settles.

Debug-symbol packages are excluded from every figure in this report.

No data is collected for any other programming language, so this report makes no cross-language comparison.

Source: Launchpad download counts for Backports PPA. Collected by scripts/collect.py; figures reproducible from data/downloads.json for month 2025-04.
