

# .NET on Ubuntu — January 2025

Package download statistics for the dotnet/backports PPA on Launchpad.

|                  |                                                                                                                     |
|------------------|---------------------------------------------------------------------------------------------------------------------|
| Reporting period | January 2025 (2025-01-01 to 2025-01-31, UTC)                                                                        |
| Data window      | 2024-04-26 to 2026-07-31                                                                                            |

## At a glance

Headline volume and the month's most material movements.

 **Partial month.** 29 of 31 days carry download counts (94%). Totals understate actual volume.

|                                                                                                 |                                                                              |                                                                                               |                                                                                           |

## Key findings

- Data covers 29 of 31 days (94%); 2 day(s) are missing, so monthly totals understate actual volume and month-on-month comparisons are not like for like.
- Unusual spike on 2025-01-28 (9,381 downloads, 4.9σ above the month's mean) — worth confirming the cause before quoting the monthly total.
- 23,120 downloads in January 2025 (797/day), up +10.7% against December 2024.
- Adoption of dotnet9 is accelerating: 79.7% of the month's volume, +8.5pp on December 2024 (+23.9% in absolute terms).
- dotnet6 is being displaced: 14.6% of volume, -6.0pp on December 2024 — consistent with migration to newer releases.
- Every runtime-only download came with 0.47 SDK downloads (2,311 SDK vs 4,967 runtime) — a proxy for developer-side rather than deployment-side pull.
- Ubuntu noble takes 68.1% of the month's downloads; LTS releases account for 100.0% in total.

Monthly downloads, last 10 months

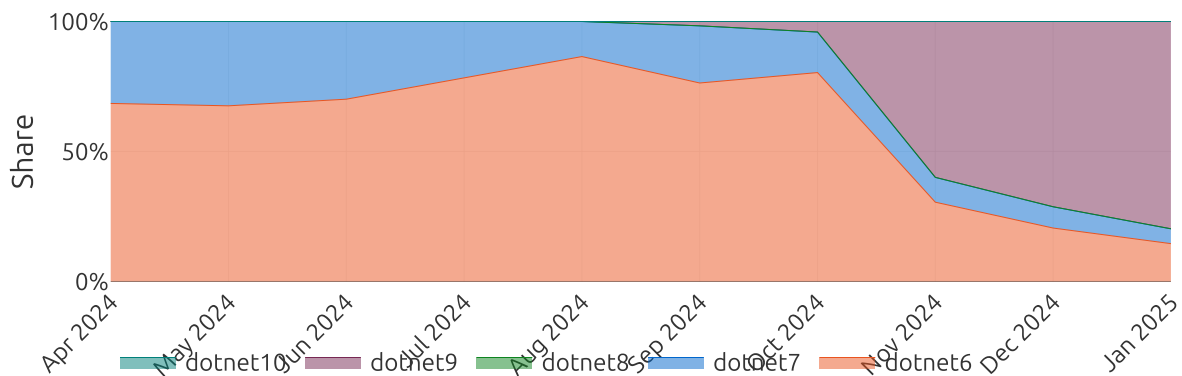

Daily downloads through the month (day of month on x axis)

## Composition & adoption

Which .NET releases, Ubuntu series and architectures the downloads came from, and how the mix moved.

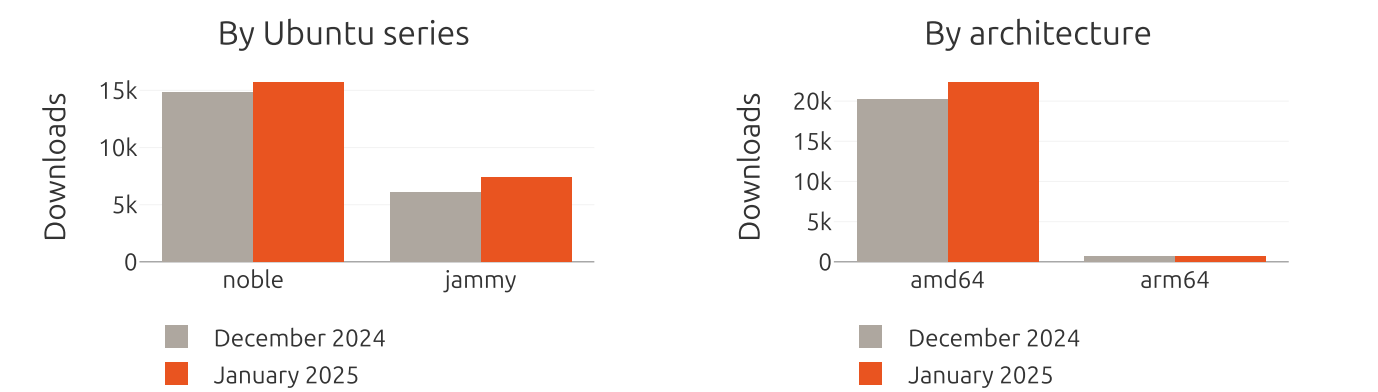

Share of downloads by .NET version

Version detail

| VERSION | DOWNLOADS | SHARE | MOM    | SHARE CHANGE |
|---------|-----------|-------|--------|--------------|
| dotnet9 | 18,436    | 79.7% | +23.9% | +8.5pp       |
| dotnet6 | 3,364     | 14.6% | -21.6% | -6.0pp       |
| dotnet7 | 1,320     | 5.7%  | -22.8% | -2.5pp       |

Share change is in percentage points against December 2024.

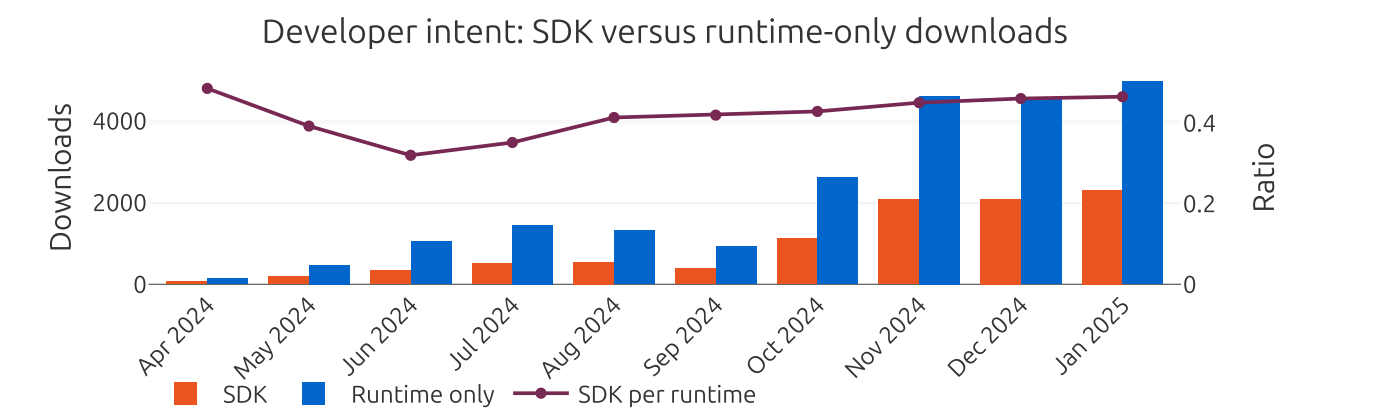

Ubuntu series detail

| VALUE | DOWNLOADS | SHARE | DECEMBER 2024 | MOM    |
|-------|-----------|-------|---------------|--------|
| noble | 15,742    | 68.1% | 14,790        | +6.4%  |
| jammy | 7,378     | 31.9% | 6,089         | +21.2% |

LTS series (jammy (22.04 LTS), noble (24.04 LTS)) account for 100.0% of the month, +0.0pp on December 2024.

Architecture detail

| VALUE | DOWNLOADS | SHARE | DECEMBER 2024 | MOM    |
|-------|-----------|-------|---------------|--------|
| amd64 | 22,395    | 96.9% | 20,252        | +10.6% |
| arm64 | 725       | 3.1%  | 627           | +15.6% |

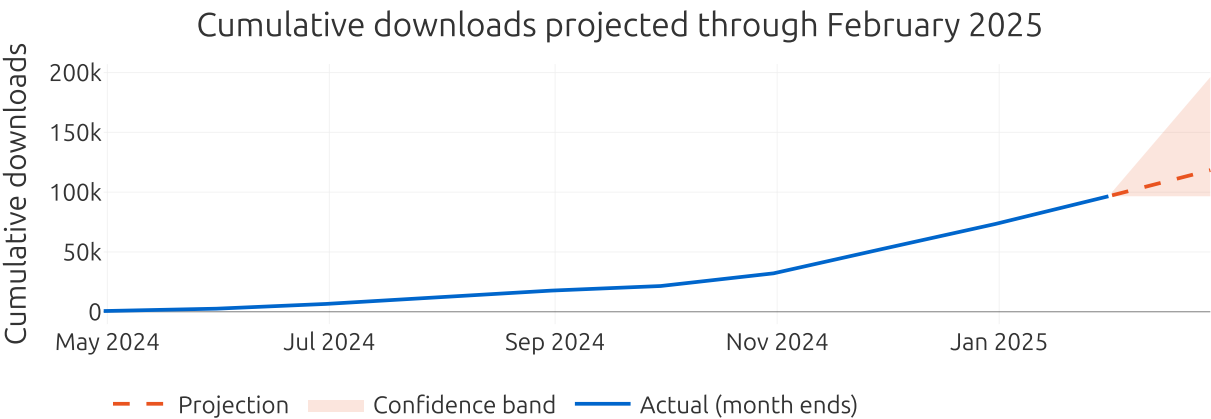

Top packages this month

| PACKAGE                            | TYPE               | DOWNLOADS | MOM    |
|------------------------------------|--------------------|-----------|--------|
| dotnet-host-9.0                    | host               | 1,960     | +25.0% |
| dotnet-hostfxr-9.0                 | hostfxr            | 1,942     | +24.2% |
| dotnet-runtime-9.0                 | runtime            | 1,940     | +24.0% |
| aspnetcore-runtime-9.0             | aspnetcore-runtime | 1,886     | +23.4% |
| netstandard-targeting-pack-2.1-9.0 | targeting-pack     | 1,775     | +23.4% |
| dotnet-templates-9.0               | other              | 1,772     | +24.5% |
| dotnet-sdk-9.0                     | sdk                | 1,762     | +23.0% |
| aspnetcore-targeting-pack-9.0      | targeting-pack     | 1,759     | +23.4% |
| dotnet-apphost-pack-9.0            | apphost-pack       | 1,759     | +23.6% |
| dotnet-targeting-pack-9.0          | targeting-pack     | 1,757     | +23.6% |

SDK downloads indicate development and build environments; runtime-only downloads indicate deployment targets. Neither is a count of people.

Trajectory & watch items

Where the trend is heading, and what needs a human explanation.

Projection fits the daily rate of the 60 days to 2025-01-31 and extrapolates linearly; it assumes no new release events. Indicative total for February 2025: 21,852 downloads.

Momentum by version

| VERSION | DOWNLOADS IN MONTH | LAST 7D VS PRIOR 7D | LAST 30D VS PRIOR 30D | TREND (DL/DAY²) | EST. HALF-LIFE   |
|---------|--------------------|---------------------|-----------------------|-----------------|------------------|
| dotnet6 | 3,364              | +138.0%             | +20.0%                | 6.5             | growing / stable |
| dotnet7 | 1,320              | +64.1%              | -6.4%                 | 2.4             | growing / stable |
| dotnet9 | 18,436             | +212.7%             | +48.8%                | 46.6            | growing / stable |

Windows end on 2025-01-31. Days without data are treated as zero inside these windows, so a collection gap depresses the figures.

Days needing explanation

| DATE       | DOWNLOADS | ABOVE MONTH MEAN |
|------------|-----------|------------------|
| 2025-01-28 | 9,381     | 4.9σ             |

Days more than two standard deviations above the month's mean. Common causes are release publications, mirror synchronisation and CI bursts.

Data coverage

| MEASURE                          | VALUE                  |
|----------------------------------|------------------------|
| Days in month                    | 31                     |
| Days expected in window          | 31                     |
| Days with download counts        | 29                     |
| Coverage                         | 93.5%                  |
| Missing days                     | 2                      |
| Gaps                             | 2025-01-16, 2025-01-21 |
| Month fully elapsed in dataset   | yes                    |
| Publications active in month     | 135                    |
| Publications first seen in month | 49                     |
| Collector last run               | 2026-07-31             |

A publication is one binary package version in one series and architecture. A burst of first-seen publications usually follows a release upload or a resumed collection window, not a change in demand.

Methodology & limitations

Figures count package downloads recorded by Launchpad for the dotnet/backports PPA only.

The primary Ubuntu archive publishes no download telemetry, so packages installed from it are not represented here. This report is a directional indicator, not total .NET usage on Ubuntu.

Downloads are not users. CI/CD pipelines, container image builds, mirrors and repeated installations all inflate counts, and one developer may generate many downloads.

Counts are deduplicated per publication and day, keeping the maximum value reported by Launchpad; recent days may still rise as Launchpad reporting settles.

Debug-symbol packages are excluded from every figure in this report.

No data is collected for any other programming language, so this report makes no cross-language comparison.

Source: Launchpad download counts for Backports PPA. Collected by scripts/collect.py; figures reproducible from data/downloads.json for month 2025-01.
