## Key findings

|                                                                                                                                                           |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Unusual spike on 2025-05-27 (5,487 downloads, 3.1σ above the month's mean) — worth confirming the cause before quoting the monthly total.                 |
| 45,648 downloads in May 2025 (1,473/day), down -33.3% against April 2025. Year on year the month is 23× higher than May 2024.                             |
| dotnet9 lost share this month, down to 81.3% (-8.0pp).                                                                                                    |
| dotnet9 is being displaced: 81.3% of volume, -8.0pp on April 2025 — consistent with migration to newer releases.                                          |
| Every runtime-only download came with 0.72 SDK downloads (6,930 SDK vs 9,647 runtime), -11.7% on April 2025 — the mix shifted towards deployment targets. |
| Ubuntu noble takes 74.5% of the month's downloads; LTS releases account for 100.0% in total.                                                              |

Monthly downloads, last 13 months

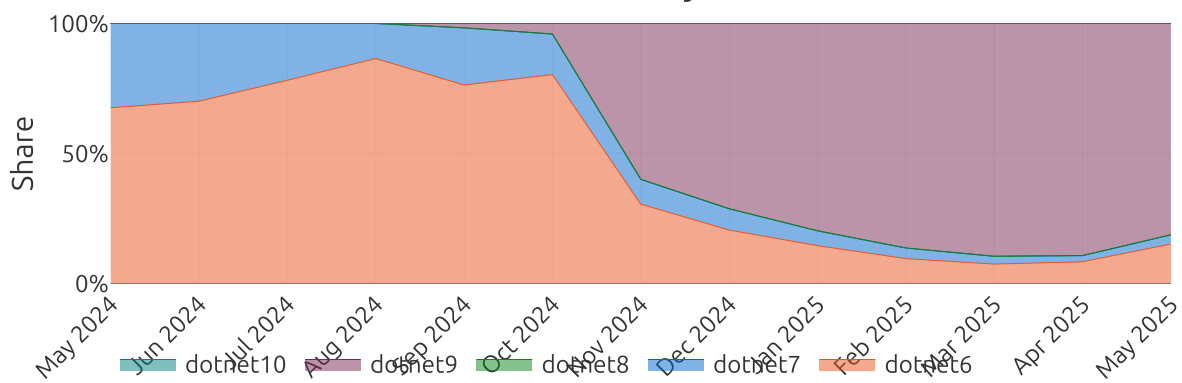

Daily downloads through the month (day of month on x axis)

## Composition & adoption

Which .NET releases, Ubuntu series and architectures the downloads came from, and how the mix moved.

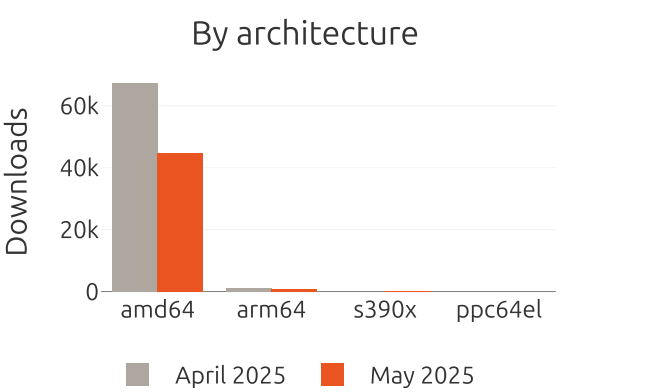

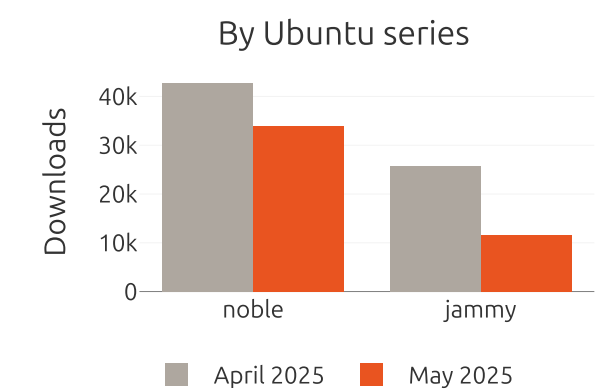

Share of downloads by .NET version

Version detail

| VERSION | DOWNLOADS | SHARE | MOM    | SHARE CHANGE |
|---------|-----------|-------|--------|--------------|
| dotnet9 | 37,106    | 81.3% | -39.3% | -8.0pp       |
| dotnet6 | 6,921     | 15.2% | +21.2% | +6.8pp       |
| dotnet7 | 1,621     | 3.6%  | -0.5%  | +1.2pp       |

Share change is in percentage points against April 2025.

Ubuntu series detail

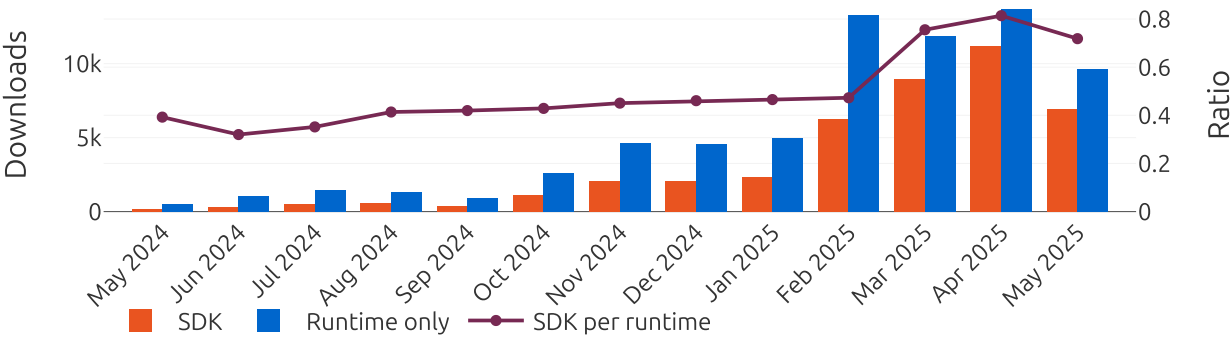

| VALUE | DOWNLOADS | SHARE | APRIL 2025 | MOM    |
|-------|-----------|-------|------------|--------|
| noble | 33,996    | 74.5% | 42,688     | -20.4% |
| jammy | 11,652    | 25.5% | 25,752     | -54.8% |

LTS series (jammy (22.04 LTS), noble (24.04 LTS)) account for 100.0% of the month, +0.0pp on April 2025.

Architecture detail

| VALUE   | DOWNLOADS | SHARE | APRIL 2025 | MOM    |
|---------|-----------|-------|------------|--------|
| amd64   | 44,670    | 97.9% | 67,215     | -33.5% |
| arm64   | 967       | 2.1%  | 1,225      | -21.1% |
| s390x   | 10        | 0.0%  | 0          | n/a    |
| ppc64el | 1         | 0.0%  | 0          | n/a    |

## Developer intent: SDK versus runtime-only downloads

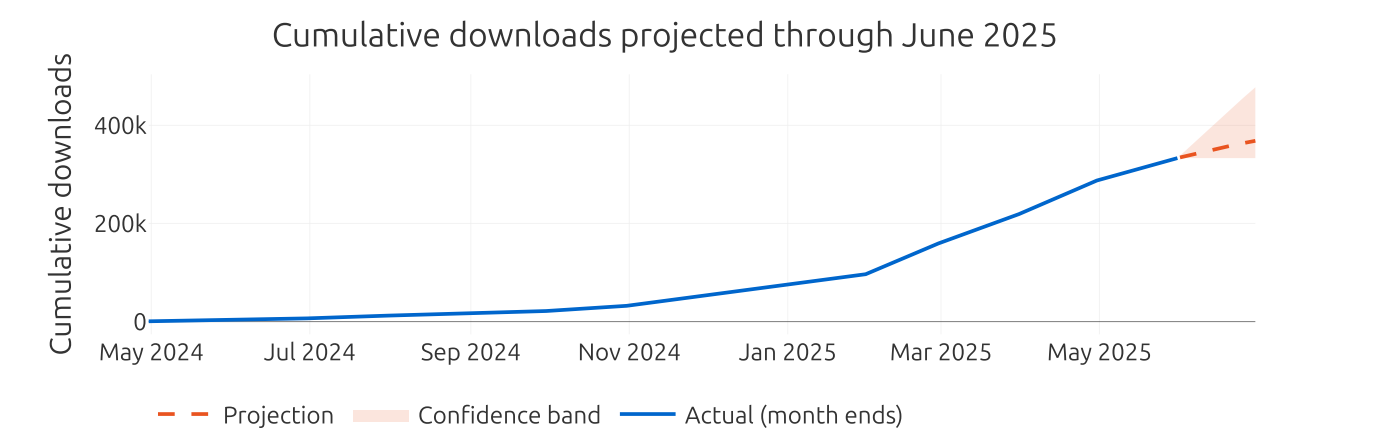

### Top packages this month

| PACKAGE                            | TYPE               | DOWNLOADS | MOM    |
|------------------------------------|--------------------|-----------|--------|
| dotnet-runtime-9.0                 | runtime            | 3,823     | -36.0% |
| dotnet-host-9.0                    | host               | 3,795     | -37.2% |
| dotnet-hostfxr-9.0                 | hostfxr            | 3,787     | -36.9% |
| aspnetcore-runtime-9.0             | aspnetcore-runtime | 3,734     | -36.5% |
| aspnetcore-targeting-pack-9.0      | targeting-pack     | 3,197     | -39.8% |
| dotnet-apphost-pack-9.0            | apphost-pack       | 3,194     | -39.8% |
| dotnet-targeting-pack-9.0          | targeting-pack     | 3,191     | -39.8% |
| netstandard-targeting-pack-2.1-9.0 | targeting-pack     | 3,118     | -41.8% |
| dotnet-templates-9.0               | other              | 3,099     | -41.6% |
| dotnet-sdk-9.0                     | sdk                | 3,084     | -41.6% |

SDK downloads indicate development and build environments; runtime-only downloads indicate deployment targets. Neither is a count of people.

### Trajectory & watch items

Where the trend is heading, and what needs a human explanation.

Projection fits the daily rate of the 60 days to 2025-05-31 and extrapolates linearly; it assumes no new release events. Indicative total for June 2025: 35,245 downloads.

Momentum by version

| VERSION | DOWNLOADS IN MONTH | LAST 7D VS PRIOR 7D | LAST 30D VS PRIOR 30D | TREND (DL/DAY²) | EST. HALF-LIFE   |
|---------|--------------------|---------------------|-----------------------|-----------------|------------------|
| dotnet6 | 6,921              | +135.8%             | +32.0%                | 7.9             | growing / stable |
| dotnet7 | 1,621              | +120.9%             | +4.2%                 | 0.3             | growing / stable |
| dotnet9 | 37,106             | +59.5%              | -35.0%                | 51.5            | growing / stable |

Windows end on 2025-05-31. Days without data are treated as zero inside these windows, so a collection gap depresses the figures.

Days needing explanation

| DATE       | DOWNLOADS | ABOVE MONTH MEAN |
|------------|-----------|------------------|
| 2025-05-27 | 5,487     | 3.1σ             |
| 2025-05-30 | 4,139     | 2.1σ             |

Days more than two standard deviations above the month's mean. Common causes are release publications, mirror synchronisation and CI bursts.

Data coverage

| MEASURE                          | VALUE      |
|----------------------------------|------------|
| Days in month                    | 31         |
| Days expected in window          | 31         |
| Days with download counts        | 31         |
| Coverage                         | 100.0%     |
| Missing days                     | 0          |
| Gaps                             | none       |
| Month fully elapsed in dataset   | yes        |
| Publications active in month     | 161        |
| Publications first seen in month | 69         |
| Collector last run               | 2026-07-31 |

A publication is one binary package version in one series and architecture. A burst of first-seen publications usually follows a release upload or a resumed collection window, not a change in demand.

Methodology & limitations

Figures count package downloads recorded by Launchpad for the dotnet/backports PPA only.

The primary Ubuntu archive publishes no download telemetry, so packages installed from it are not represented here. This report is a directional indicator, not total .NET usage on Ubuntu.

Downloads are not users. CI/CD pipelines, container image builds, mirrors and repeated installations all inflate counts, and one developer may generate many downloads.

Counts are deduplicated per publication and day, keeping the maximum value reported by Launchpad; recent days may still rise as Launchpad reporting settles.

Debug-symbol packages are excluded from every figure in this report.

No data is collected for any other programming language, so this report makes no cross-language comparison.

Source: Launchpad download counts for Backports PPA. Collected by scripts/collect.py; figures reproducible from data/downloads.json for month 2025-05.
