

.NET on Ubuntu — November 2025

Package download statistics for the dotnet/backports PPA on Launchpad.

Reporting period	November 2025 (2025-11-01 to 2025-11-30, UTC)
Data window	2024-04-26 to 2026-07-31
Generated	2026-08-03 00:40:39 UTC
Origin	Backports PPA
Scope	dotnet6, dotnet7, dotnet8, dotnet9, dotnet10 · all Ubuntu series and architectures · debug-symbol packages excluded

At a glance

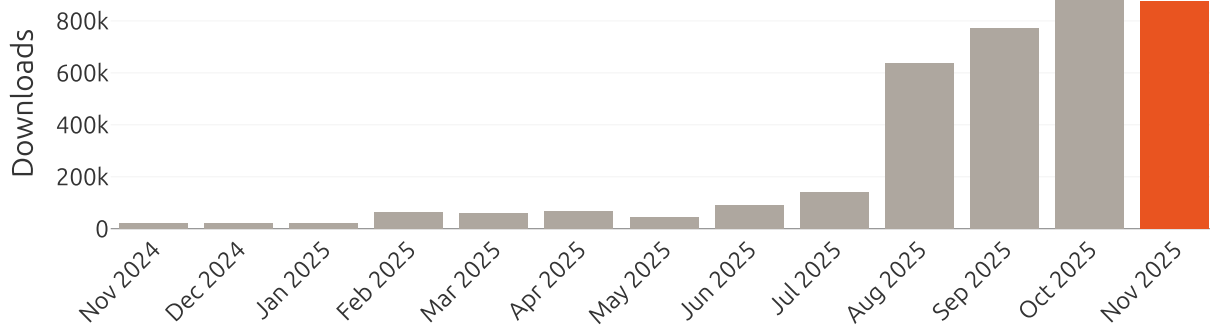

Headline volume and the month's most material movements.

Downloads in month 875,620 vs October 2025: -4.5%	Average per day 29,187 over 30 days with data	Year on year 43× vs November 2024 (20,422)	Peak day 60,903 2025-11-14
Leading version dotnet9 89.6% of the month · 5 active versions	Newest version share 3.2% dotnet10 · +3.2pp	SDK per runtime download 0.53 developer-intent proxy · -9.2%	Lifetime to month end 3,765,999 cumulative since 2024-04-26

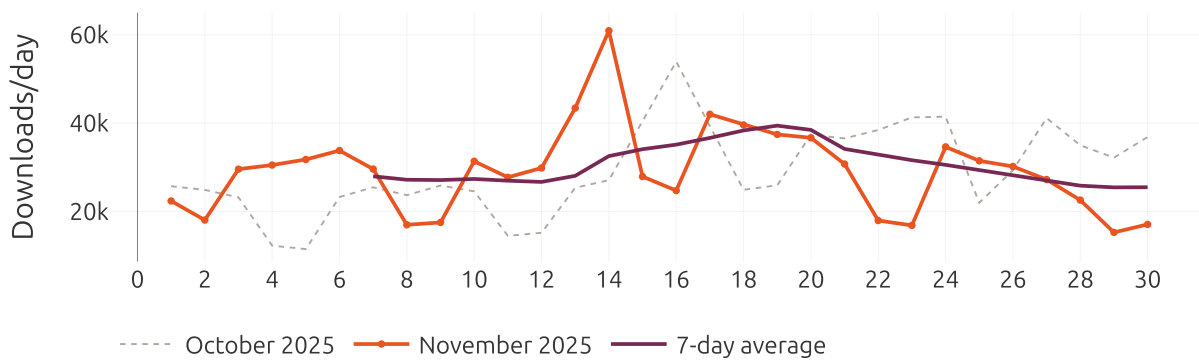

Key findings

Unusual spike on 2025-11-14 (60,903 downloads, 3.2σ above the month's mean) — worth confirming the cause before quoting the monthly total.
875,620 downloads in November 2025 (29,187/day), broadly flat, -4.5% against October 2025. Year on year the month is 43× higher than November 2024.
Adoption of dotnet10 is accelerating: 3.2% of the month's volume, +3.2pp on October 2025.
dotnet9 remains the most downloaded release at 89.6% of the month, across 5 active .NET versions.
Every runtime-only download came with 0.53 SDK downloads (118,780 SDK vs 223,324 runtime) — a proxy for developer-side rather than deployment-side pull.
arm64 is now 18.9% of downloads (+4.8pp on October 2025).

Monthly downloads, last 13 months

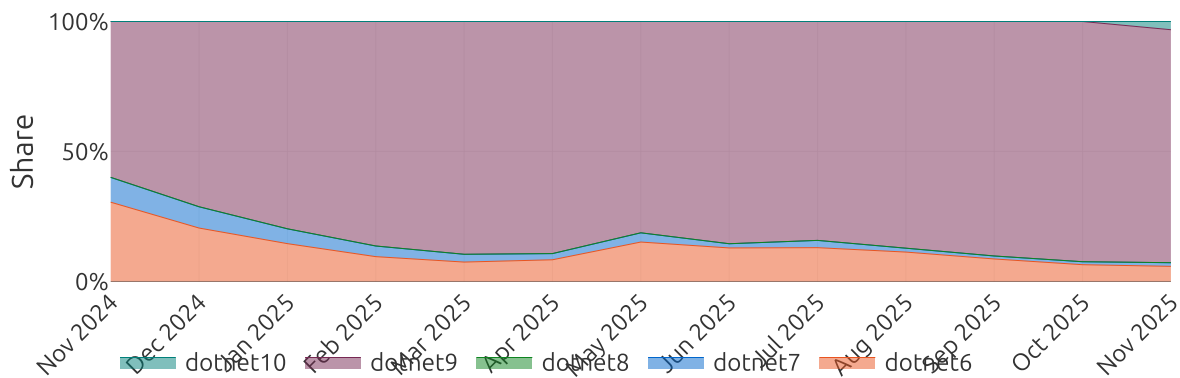

Daily downloads through the month (day of month on x axis)

Composition & adoption

Which .NET releases, Ubuntu series and architectures the downloads came from, and how the mix moved.

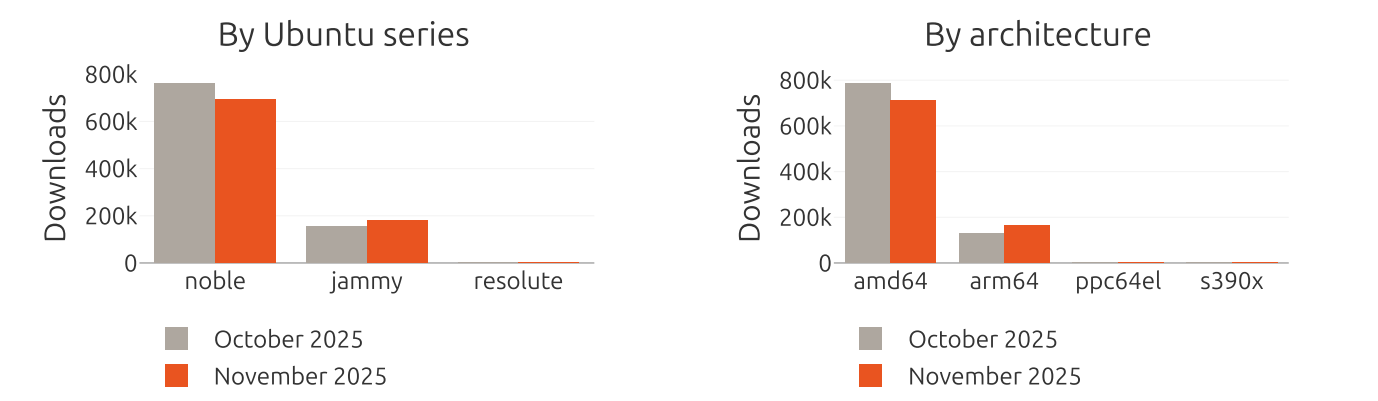

Share of downloads by .NET version

Version detail

VERSION	DOWNLOADS	SHARE	MOM	SHARE CHANGE
dotnet9	784,641	89.6%	-7.4%	-2.8pp
dotnet6	50,928	5.8%	-13.8%	-0.6pp
dotnet10	27,727	3.2%	n/a	+3.2pp
dotnet7	12,243	1.4%	+16.4%	+0.3pp
dotnet8	81	0.0%	+350.0%	+0.0pp

Share change is in percentage points against October 2025.

Ubuntu series detail

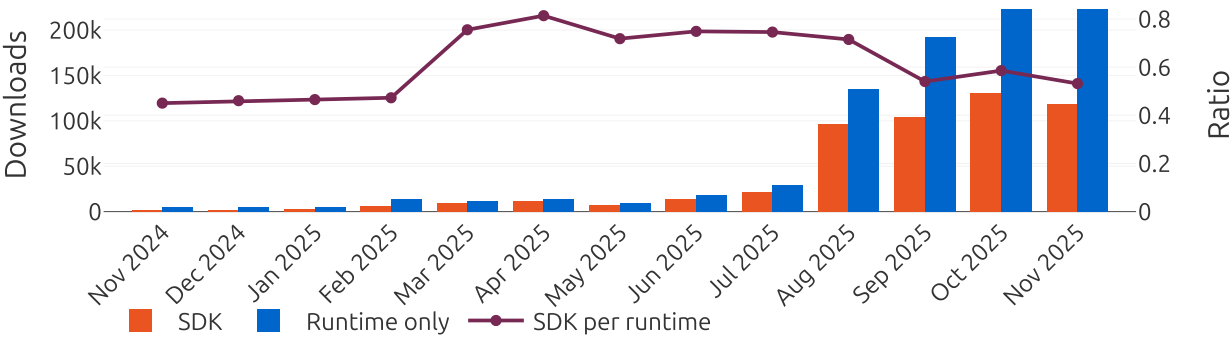

VALUE	DOWNLOADS	SHARE	OCTOBER 2025	MOM
noble	694,897	79.4%	762,979	-8.9%
jammy	180,570	20.6%	153,773	+17.4%
resolute	153	0.0%	44	+247.7%

LTS series (jammy (22.04 LTS), noble (24.04 LTS)) account for 100.0% of the month, -0.0pp on October 2025.

Architecture detail

VALUE	DOWNLOADS	SHARE	OCTOBER 2025	MOM
amd64	709,996	81.1%	787,738	-9.9%
arm64	165,423	18.9%	128,864	+28.4%
ppc64el	101	0.0%	102	-1.0%
s390x	100	0.0%	92	+8.7%

Developer intent: SDK versus runtime-only downloads

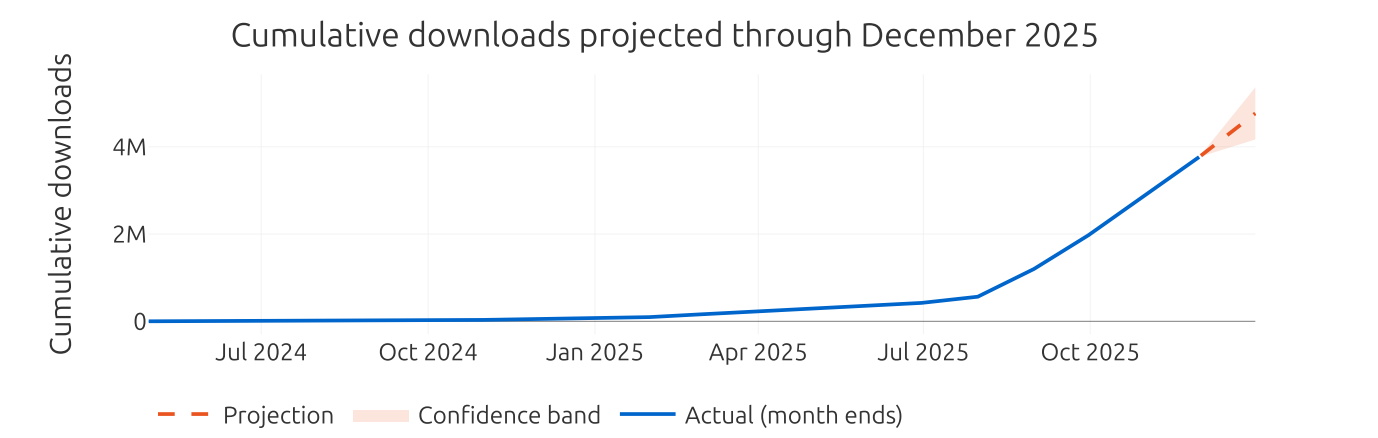

Top packages this month

PACKAGE	TYPE	DOWNLOADS	MOM
dotnet-runtime-9.0	runtime	100,386	-1.2%
dotnet-hostfxr-9.0	hostfxr	99,835	-1.2%
dotnet-host-9.0	host	99,521	-1.7%
aspnetcore-runtime-9.0	aspnetcore-runtime	98,078	-1.5%
aspnetcore-targeting-pack-9.0	targeting-pack	55,662	-11.9%
dotnet-apphost-pack-9.0	apphost-pack	55,606	-12.0%
dotnet-targeting-pack-9.0	targeting-pack	55,473	-12.0%
netstandard-targeting-pack-2.1-9.0	targeting-pack	54,926	-11.8%
dotnet-sdk-9.0	sdk	54,887	-11.8%
dotnet-templates-9.0	other	53,928	-12.0%

SDK downloads indicate development and build environments; runtime-only downloads indicate deployment targets. Neither is a count of people.

Trajectory & watch items

Where the trend is heading, and what needs a human explanation.

Projection fits the daily rate of the 60 days to 2025-11-30 and extrapolates linearly; it assumes no new release events. Indicative total for December 2025: 1,001,196 downloads.

Momentum by version

VERSION	DOWNLOADS IN MONTH	LAST 7D VS PRIOR 7D	LAST 30D VS PRIOR 30D	TREND (DL/DAY²)	EST. HALF-LIFE
dotnet6	50,928	-20.7%	-10.0%	-26.3	88 days
dotnet7	12,243	-20.2%	+20.6%	-1.4	growing / stable
dotnet8	81	+210.0%	+350.0%	0.1	growing / stable
dotnet9	784,641	-21.0%	-4.8%	-138.2	75 days
dotnet10	27,727	+12.3%	n/a	72.3	89 days

Windows end on 2025-11-30. Days without data are treated as zero inside these windows, so a collection gap depresses the figures.

Days needing explanation

DATE	DOWNLOADS	ABOVE MONTH MEAN
2025-11-14	60,903	3.2σ

Days more than two standard deviations above the month's mean. Common causes are release publications, mirror synchronisation and CI bursts.

Data coverage

MEASURE	VALUE
Days in month	30
Days expected in window	30
Days with download counts	30
Coverage	100.0%
Missing days	0
Gaps	none
Month fully elapsed in dataset	yes
Publications active in month	389
Publications first seen in month	221
Collector last run	2026-07-31

A publication is one binary package version in one series and architecture. A burst of first-seen publications usually follows a release upload or a resumed collection window, not a change in demand.

Methodology & limitations

Figures count package downloads recorded by Launchpad for the dotnet/backports PPA only.

The primary Ubuntu archive publishes no download telemetry, so packages installed from it are not represented here. This report is a directional indicator, not total .NET usage on Ubuntu.

Downloads are not users. CI/CD pipelines, container image builds, mirrors and repeated installations all inflate counts, and one developer may generate many downloads.

Counts are deduplicated per publication and day, keeping the maximum value reported by Launchpad; recent days may still rise as Launchpad reporting settles.

Debug-symbol packages are excluded from every figure in this report.

No data is collected for any other programming language, so this report makes no cross-language comparison.

Source: Launchpad download counts for Backports PPA. Collected by scripts/collect.py; figures reproducible from data/downloads.json for month 2025-11.
