

.NET on Ubuntu — January 2026

Package download statistics for the dotnet/backports PPA on Launchpad.

Reporting period	January 2026 (2026-01-01 to 2026-01-31, UTC)
Data window	2024-04-26 to 2026-07-31
Generated	2026-08-03 00:40:45 UTC
Origin	Backports PPA
Scope	dotnet6, dotnet7, dotnet8, dotnet9, dotnet10 · all Ubuntu series and architectures · debug-symbol packages excluded

At a glance

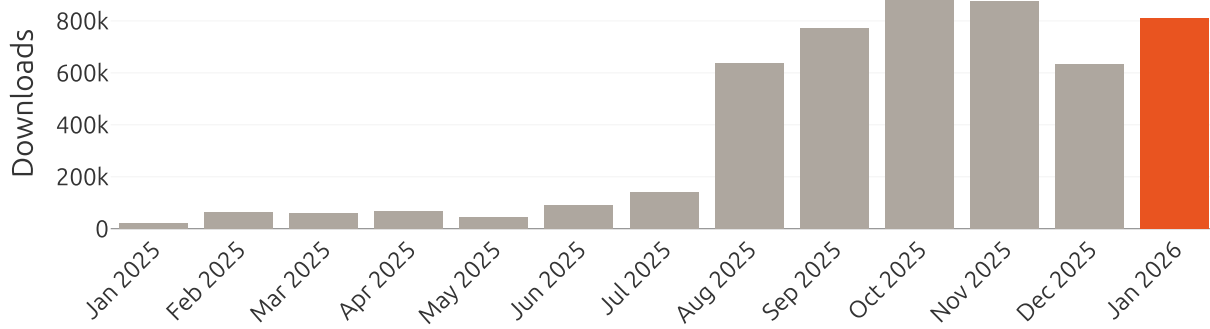

Headline volume and the month's most material movements.

Downloads in month 809,377 vs December 2025: +27.6%	Average per day 26,109 over 31 days with data	Year on year 35× vs January 2025 (23,120)	Peak day 57,503 2026-01-23
Leading version dotnet9 81.9% of the month · 5 active versions	Newest version share 13.1% dotnet10 · +1.9pp	SDK per runtime download 0.60 developer-intent proxy · +14.0%	Lifetime to month end 5,209,903 cumulative since 2024-04-26

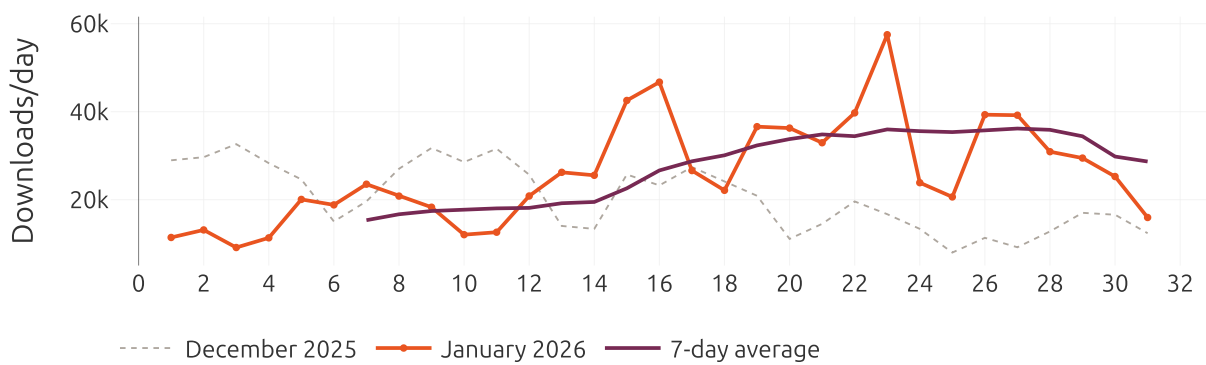

Key findings

809,377 downloads in January 2026 (26,109/day), up +27.6% against December 2025. Year on year the month is 35× higher than January 2025.
dotnet9 remains the most downloaded release at 81.9% of the month, across 5 active .NET versions.
Every runtime-only download came with 0.60 SDK downloads (117,266 SDK vs 194,972 runtime), +14.0% on December 2025 — the mix shifted towards development and build environments.
arm64 is now 14.9% of downloads (-4.4pp on December 2025).
Linear extrapolation of the last 60 days projects roughly 875,524 downloads in February 2026 (+8.2% on January 2026).

Monthly downloads, last 13 months

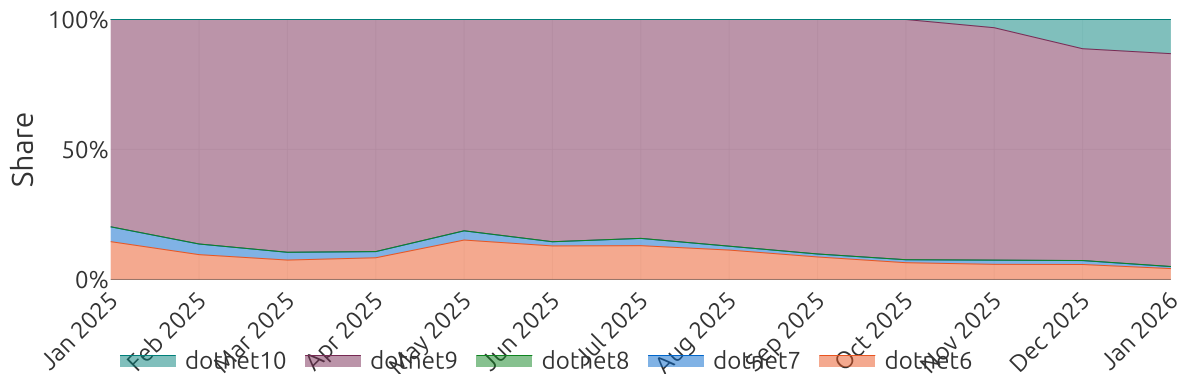

Daily downloads through the month (day of month on x axis)

Composition & adoption

Which .NET releases, Ubuntu series and architectures the downloads came from, and how the mix moved.

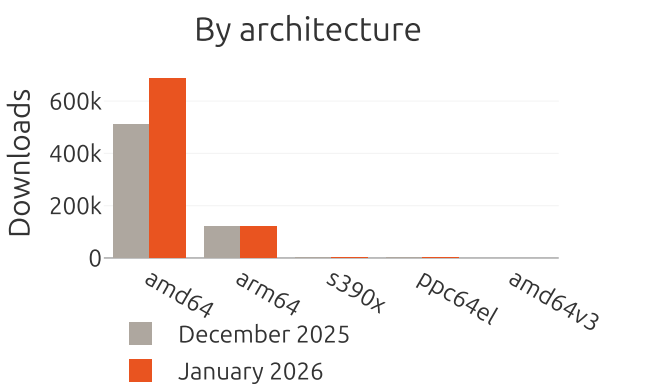

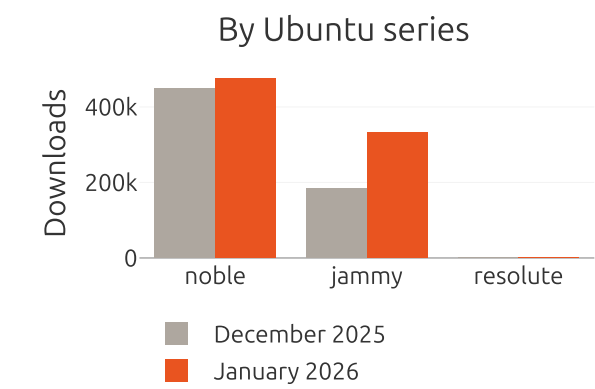

Share of downloads by .NET version

Version detail

VERSION	DOWNLOADS	SHARE	MOM	SHARE CHANGE
dotnet9	662,551	81.9%	+28.2%	+0.4pp
dotnet10	106,399	13.1%	+49.1%	+1.9pp
dotnet6	33,888	4.2%	-7.3%	-1.6pp
dotnet7	6,077	0.8%	-36.1%	-0.7pp
dotnet8	462	0.1%	+139.4%	+0.0pp

Share change is in percentage points against December 2025.

Ubuntu series detail

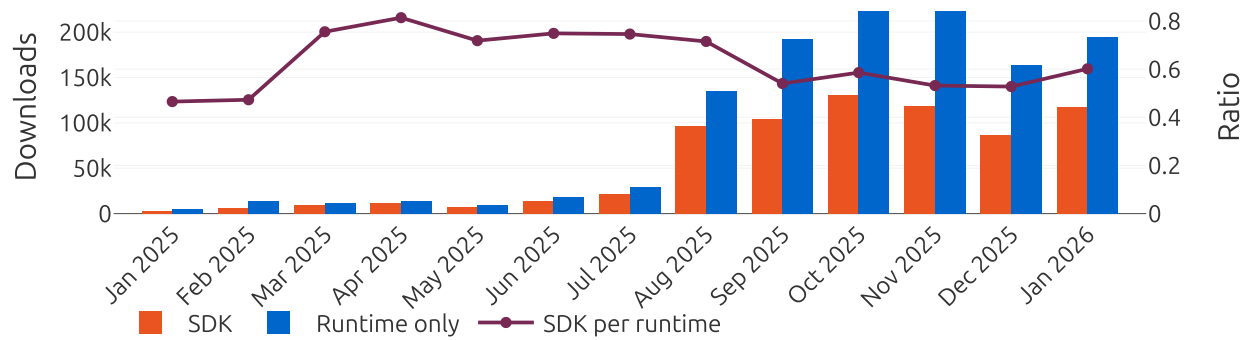

VALUE	DOWNLOADS	SHARE	DECEMBER 2025	MOM
noble	476,580	58.9%	449,027	+6.1%
jammy	332,005	41.0%	185,109	+79.4%
resolute	792	0.1%	391	+102.6%

LTS series (jammy (22.04 LTS), noble (24.04 LTS)) account for 99.9% of the month, -0.0pp on December 2025.

Architecture detail

VALUE	DOWNLOADS	SHARE	DECEMBER 2025	MOM
amd64	688,220	85.0%	511,818	+34.5%
arm64	120,658	14.9%	122,357	-1.4%
s390x	239	0.0%	167	+43.1%
ppc64el	236	0.0%	169	+39.6%
amd64v3	24	0.0%	16	+50.0%

Developer intent: SDK versus runtime-only downloads

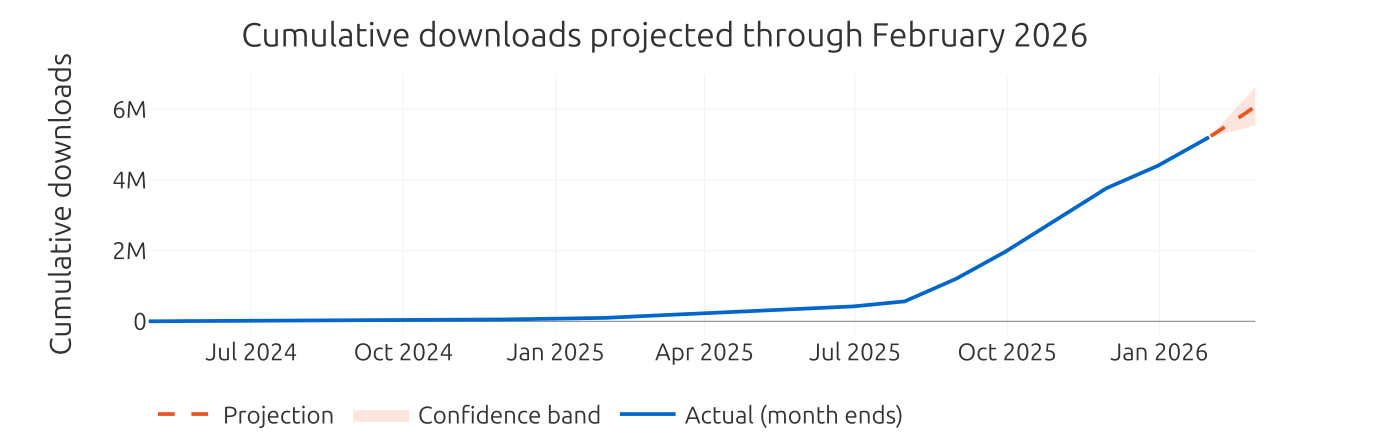

Top packages this month

PACKAGE	TYPE	DOWNLOADS	MOM
dotnet-runtime-9.0	runtime	81,648	+20.4%
dotnet-hostfxr-9.0	hostfxr	81,530	+20.3%
aspnetcore-runtime-9.0	aspnetcore-runtime	79,855	+19.8%
dotnet-host-9.0	host	73,747	+12.6%
aspnetcore-targeting-pack-9.0	targeting-pack	50,605	+40.5%
dotnet-apphost-pack-9.0	apphost-pack	50,497	+40.4%
dotnet-targeting-pack-9.0	targeting-pack	50,405	+40.7%
netstandard-targeting-pack-2.1-9.0	targeting-pack	49,414	+39.4%
dotnet-templates-9.0	other	49,073	+40.1%
dotnet-sdk-9.0	sdk	48,758	+37.5%

SDK downloads indicate development and build environments; runtime-only downloads indicate deployment targets. Neither is a count of people.

Trajectory & watch items

Where the trend is heading, and what needs a human explanation.

Projection fits the daily rate of the 60 days to 2026-01-31 and extrapolates linearly; it assumes no new release events. Indicative total for February 2026: 875,524 downloads.

Momentum by version

VERSION	DOWNLOADS IN MONTH	LAST 7D VS PRIOR 7D	LAST 30D VS PRIOR 30D	TREND (DL/DAY²)	EST. HALF-LIFE
dotnet6	33,888	+5.9%	-3.4%	15.4	growing / stable
dotnet7	6,077	-21.4%	-32.5%	3.6	199 days
dotnet8	462	-79.3%	+134.2%	0.3	growing / stable
dotnet9	662,551	-22.7%	+37.4%	580.5	growing / stable
dotnet10	106,399	-4.0%	+53.6%	111.4	growing / stable

Windows end on 2026-01-31. Days without data are treated as zero inside these windows, so a collection gap depresses the figures.

Days needing explanation

DATE	DOWNLOADS	ABOVE MONTH MEAN
2026-01-23	57,503	2.7σ

Days more than two standard deviations above the month's mean. Common causes are release publications, mirror synchronisation and CI bursts.

Data coverage

MEASURE	VALUE
Days in month	31
Days expected in window	31
Days with download counts	31
Coverage	100.0%
Missing days	0
Gaps	none
Month fully elapsed in dataset	yes
Publications active in month	779
Publications first seen in month	486
Collector last run	2026-07-31

A publication is one binary package version in one series and architecture. A burst of first-seen publications usually follows a release upload or a resumed collection window, not a change in demand.

Methodology & limitations

Figures count package downloads recorded by Launchpad for the dotnet/backports PPA only.

The primary Ubuntu archive publishes no download telemetry, so packages installed from it are not represented here. This report is a directional indicator, not total .NET usage on Ubuntu.

Downloads are not users. CI/CD pipelines, container image builds, mirrors and repeated installations all inflate counts, and one developer may generate many downloads.

Counts are deduplicated per publication and day, keeping the maximum value reported by Launchpad; recent days may still rise as Launchpad reporting settles.

Debug-symbol packages are excluded from every figure in this report.

No data is collected for any other programming language, so this report makes no cross-language comparison.

Source: Launchpad download counts for Backports PPA. Collected by `scripts/collect.py`; figures reproducible from `data/downloads.json` for month 2026-01.
