EXECUTIVE REPORT

.NET on Ubuntu — October 2026

Package download statistics for the dotnet/backports PPA on Launchpad.

Reporting period	October 2026 (2026-10-01 to 2026-10-31, UTC)
Data window	2024-04-26 to 2026-11-02
Generated	2026-11-02 07:15:18 UTC
Origin	Backports PPA
Scope	dotnet6, dotnet7, dotnet8, dotnet9, dotnet10 · all Ubuntu series and architectures · debug-symbol packages excluded

At a glance

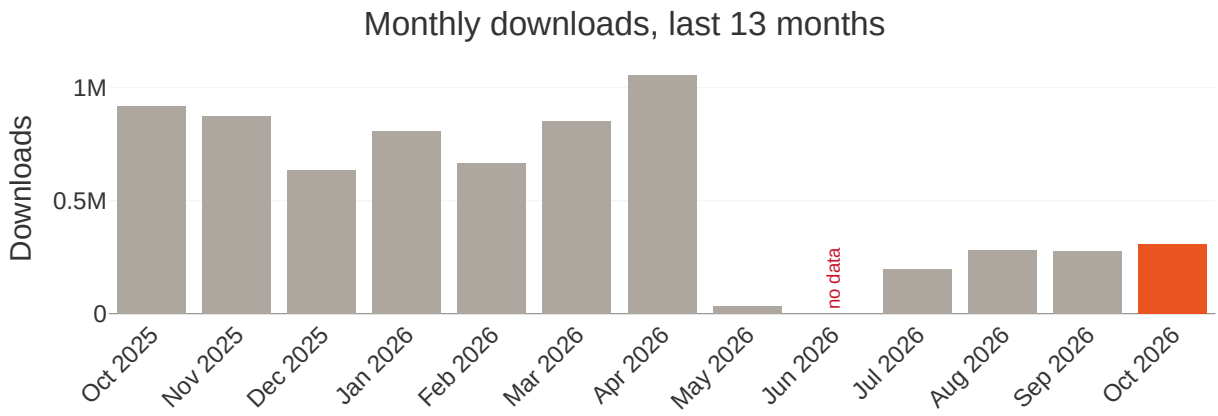

Headline volume and the month's most material movements.

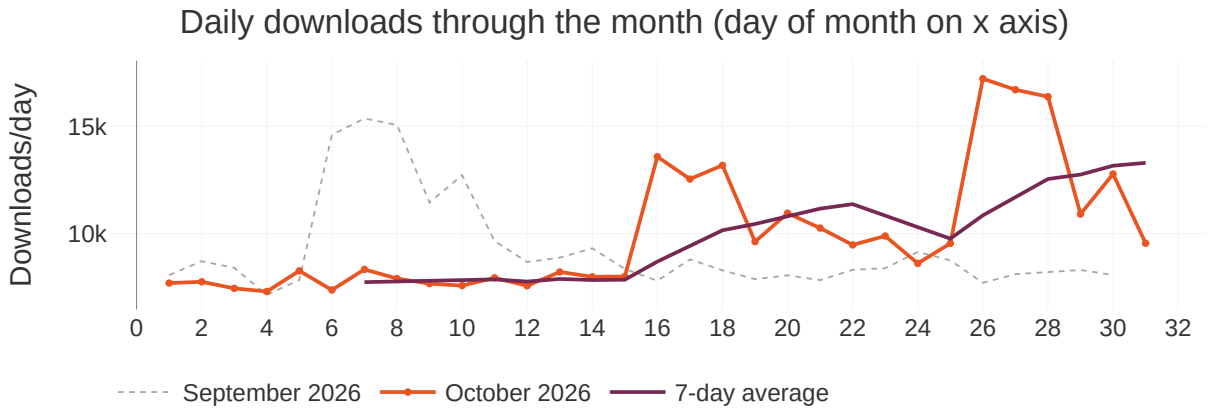

Downloads in month	Average per day	Year on year	Peak day
308,238	9,943	-66.4%	17,212
vs September 2026: +10.9%	over 31 days with data	vs October 2025 (916,796)	2026-10-26

Leading version	Newest version share	SDK per runtime download	Lifetime to month end
dotnet9	15.9%	0.82	8,883,032
49.0% of the month · 5 active versions	dotnet10 · +0.1pp	developer-intent proxy · +5.5%	cumulative since 2024-04-26

Key findings

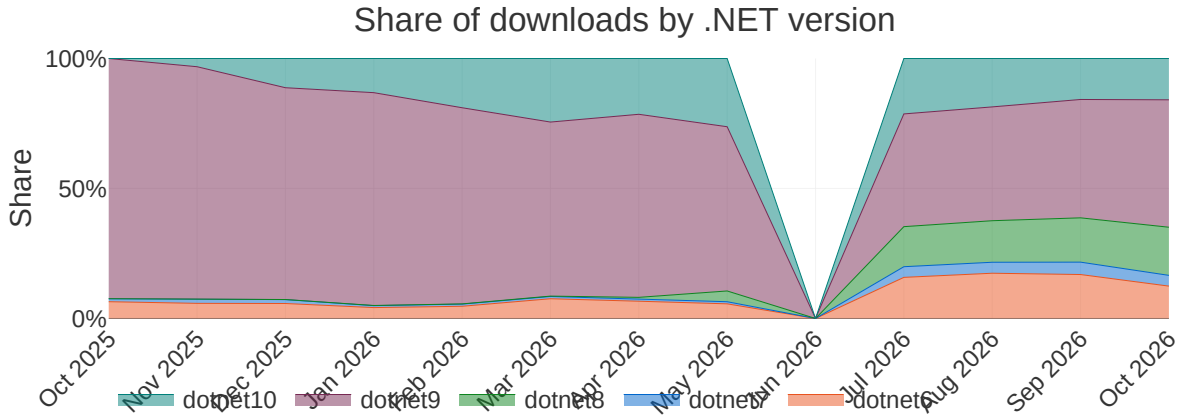

- 308,238 downloads in October 2026 (9,943/day), up +10.9% against September 2026. Year on year the month is -66.4% versus October 2025.
- dotnet9 remains the most downloaded release at 49.0% of the month, across 5 active .NET versions.
- Every runtime-only download came with 0.82 SDK downloads (54,352 SDK vs 66,668 runtime) — a proxy for developer-side rather than deployment-side pull.
- Ubuntu noble takes 35.1% of the month's downloads; LTS releases account for 68.7% in total.
- Linear extrapolation of the last 60 days projects roughly 332,788 downloads in November 2026 (+8.0% on October 2026).

Composition & adoption

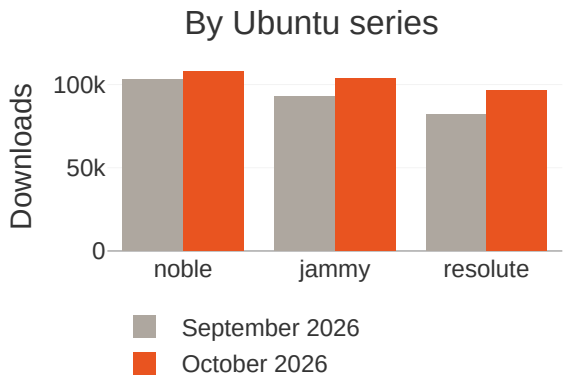

Which .NET releases, Ubuntu series and architectures the downloads came from, and how the mix moved.

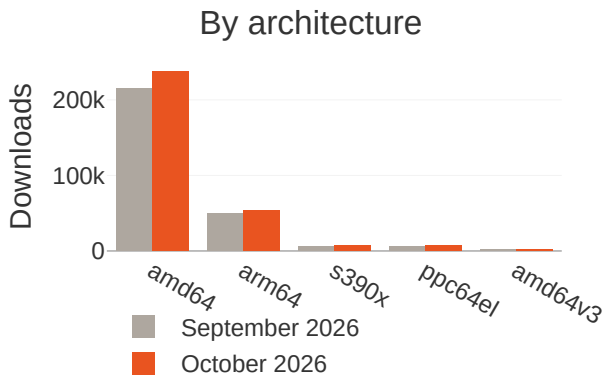

Version detail

VERSION	DOWNLOADS	SHARE	MOM	SHARE CHANGE
dotnet9	151,071	49.0%	+19.4%	+3.5pp
dotnet8	57,062	18.5%	+20.5%	+1.5pp
dotnet10	48,996	15.9%	+11.8%	+0.1pp
dotnet6	38,352	12.4%	-18.4%	-4.5pp
dotnet7	12,757	4.1%	-3.7%	-0.6pp

Share change is in percentage points against September 2026.

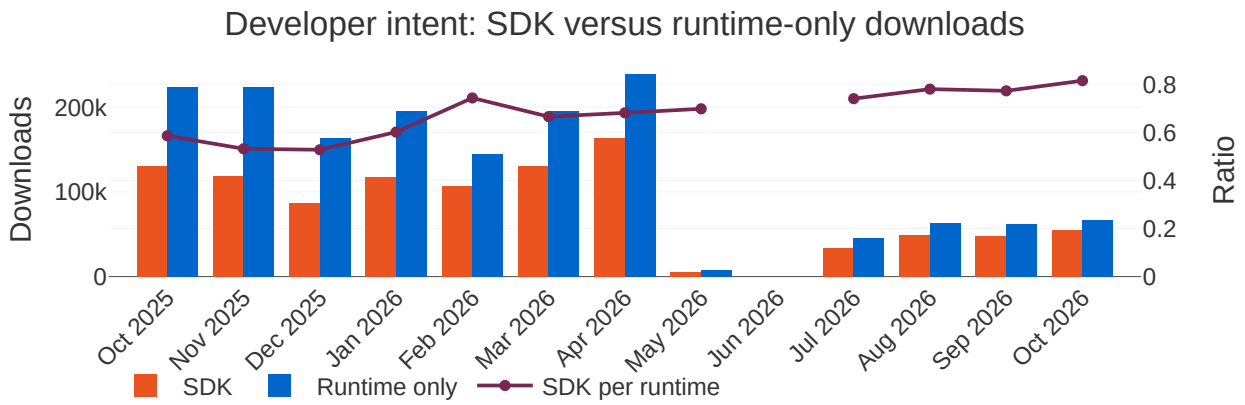

Ubuntu series detail

VALUE	DOWNLOADS	SHARE	SEPTEMBER 2026	MOM
noble	108,126	35.1%	103,145	+4.8%
jammy	103,745	33.7%	92,959	+11.6%
resolute	96,367	31.3%	81,861	+17.7%

LTS series (jammy (22.04 LTS), noble (24.04 LTS)) account for 68.7% of the month, -1.8pp on September 2026.

Architecture detail

VALUE	DOWNLOADS	SHARE	SEPTEMBER 2026	MOM
amd64	238,238	77.3%	214,600	+11.0%
arm64	53,255	17.3%	50,054	+6.4%
s390x	7,429	2.4%	5,748	+29.2%
ppc64el	7,046	2.3%	5,637	+25.0%
amd64v3	2,270	0.7%	1,926	+17.9%

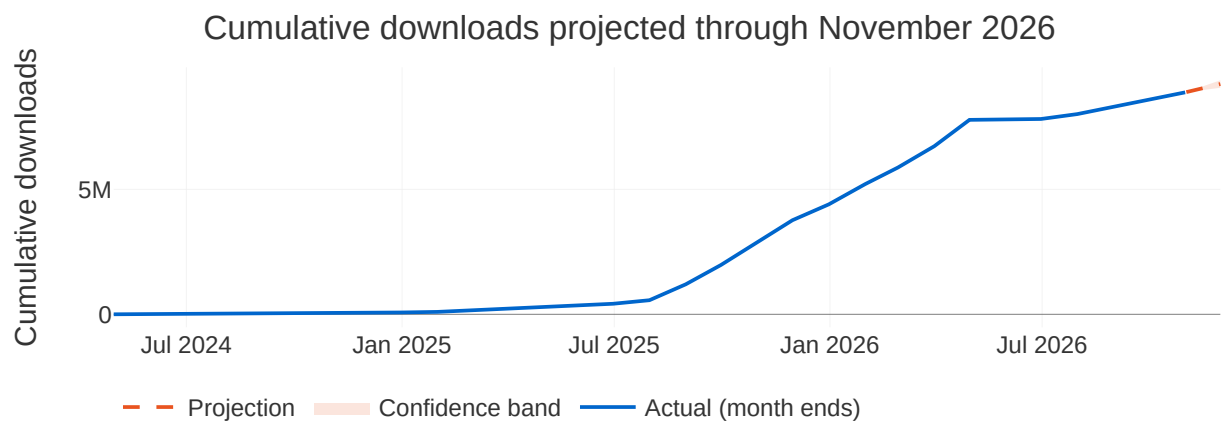

Top packages this month

PACKAGE	TYPE	DOWNLOADS	MOM
dotnet-runtime-9.0	runtime	13,375	+20.6%
aspnetcore-runtime-9.0	aspnetcore-runtime	13,034	+19.1%
dotnet-sdk-9.0	sdk	12,884	+24.8%
dotnet-hostfxr-9.0	hostfxr	12,852	+19.4%
dotnet-apphost-pack-9.0	apphost-pack	12,358	+22.8%
aspnetcore-targeting-pack-9.0	targeting-pack	12,235	+22.8%
dotnet-targeting-pack-9.0	targeting-pack	12,229	+22.7%
dotnet-templates-9.0	other	11,847	+22.8%
netstandard-targeting-pack-2.1-9.0	targeting-pack	11,823	+23.2%
dotnet-host-9.0	host	11,681	+22.4%

SDK downloads indicate development and build environments; runtime-only downloads indicate deployment targets. Neither is a count of people.

Trajectory & watch items

Where the trend is heading, and what needs a human explanation.

Projection fits the daily rate of the 60 days to 2026-10-31 and extrapolates linearly; it assumes no new release events. Indicative total for November 2026: **332,788** downloads.

Momentum by version

VERSION	DOWNLOADS IN MONTH	LAST 7D VS PRIOR 7D	LAST 30D VS PRIOR 30D	TREND (DL/DAY²)	EST. HALF-LIFE
dotnet6	38,352	-34.6%	-21.2%	-35.0	37 days
dotnet7	12,757	-0.9%	-6.3%	1.8	1888 days
dotnet8	57,062	+40.1%	+17.8%	53.6	growing / stable
dotnet9	151,071	+41.3%	+16.4%	156.7	growing / stable
dotnet10	48,996	+29.7%	+10.3%	37.0	growing / stable

Windows end on 2026-10-31. Days without data are treated as zero inside these windows, so a collection gap depresses the figures.

Days needing explanation

DATE	DOWNLOADS	ABOVE MONTH MEAN
2026-10-26	17,212	2.5σ
2026-10-27	16,699	2.3σ
2026-10-28	16,374	2.2σ

Days more than two standard deviations above the month's mean. Common causes are release publications, mirror synchronisation and CI bursts.

Data coverage

MEASURE	VALUE
Days in month	31
Days expected in window	31
Days with download counts	31
Coverage	100.0%
Missing days	0
Gaps	none
Month fully elapsed in dataset	yes
Publications active in month	1,648
Publications first seen in month	1,280
Collector last run	2026-11-02

A publication is one binary package version in one series and architecture. A burst of first-seen publications usually follows a release upload or a resumed collection window, not a change in demand.

Methodology & limitations

Figures count package downloads recorded by Launchpad for the dotnet/backports PPA only.

The primary Ubuntu archive publishes no download telemetry, so packages installed from it are not represented here. This report is a directional indicator, not total .NET usage on Ubuntu.

Downloads are not users. CI/CD pipelines, container image builds, mirrors and repeated installations all inflate counts, and one developer may generate many downloads.

Counts are deduplicated per publication and day, keeping the maximum value reported by Launchpad; recent days may still rise as Launchpad reporting settles.

Debug-symbol packages are excluded from every figure in this report.

No data is collected for any other programming language, so this report makes no cross-language comparison.

Source: Launchpad download counts for Backports PPA. Collected by scripts/collect.py; figures reproducible from data/downloads.json for month 2026-10.
