

.NET on Ubuntu — May 2024

Package download statistics for the dotnet/backports PPA on Launchpad.

Reporting period	May 2024 (2024-05-01 to 2024-05-31, UTC)
Data window	2024-04-26 to 2026-07-31
Generated	2026-08-03 00:39:46 UTC
Origin	Backports PPA
Scope	dotnet6, dotnet7, dotnet8, dotnet9, dotnet10 · all Ubuntu series and architectures · debug-symbol packages excluded

At a glance

Headline volume and the month's most material movements.

 **Partial month.** 27 of 31 days carry download counts (87%). Totals understate actual volume.

Downloads in month 1,973 vs April 2024: +215.7%	Average per day 73 over 27 days with data	Year on year n/a no comparable month	Peak day 363 2024-05-23
Leading version dotnet6 67.6% of the month · 2 active versions	Newest version share 32.4% dotnet7 · +0.9pp	SDK per runtime download 0.39 developer-intent proxy · -19.2%	Lifetime to month end 2,598 cumulative since 2024-04-26

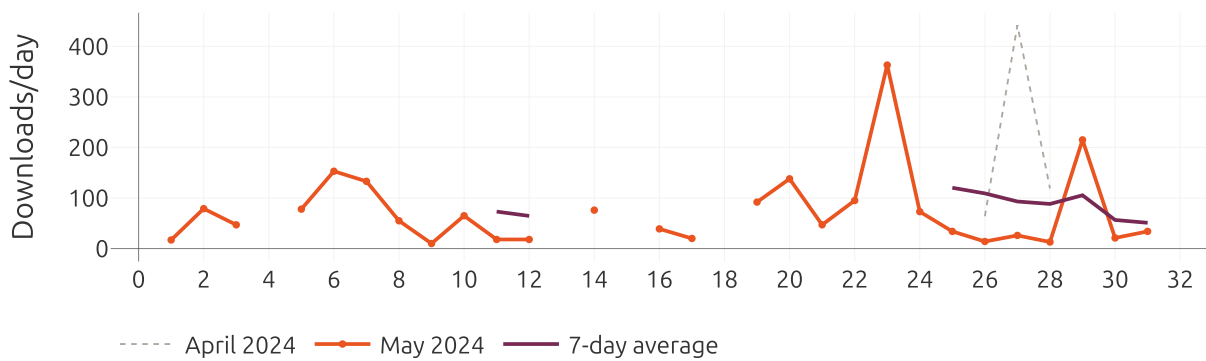

Key findings

- Data covers 27 of 31 days (87%); 4 day(s) are missing, so monthly totals understate actual volume and month-on-month comparisons are not like for like.
- Unusual spike on 2024-05-23 (363 downloads, 3.8σ above the month's mean) — worth confirming the cause before quoting the monthly total.
- 1,973 downloads in May 2024 (73/day), up +215.7% against April 2024.
- dotnet6 remains the most downloaded release at 67.6% of the month, across 2 active .NET versions.
- Every runtime-only download came with 0.39 SDK downloads (188 SDK vs 479 runtime), -19.2% on April 2024 — the mix shifted towards deployment targets.
- Ubuntu noble takes 100.0% of the month's downloads; LTS releases account for 100.0% in total.

Monthly downloads, last 2 months

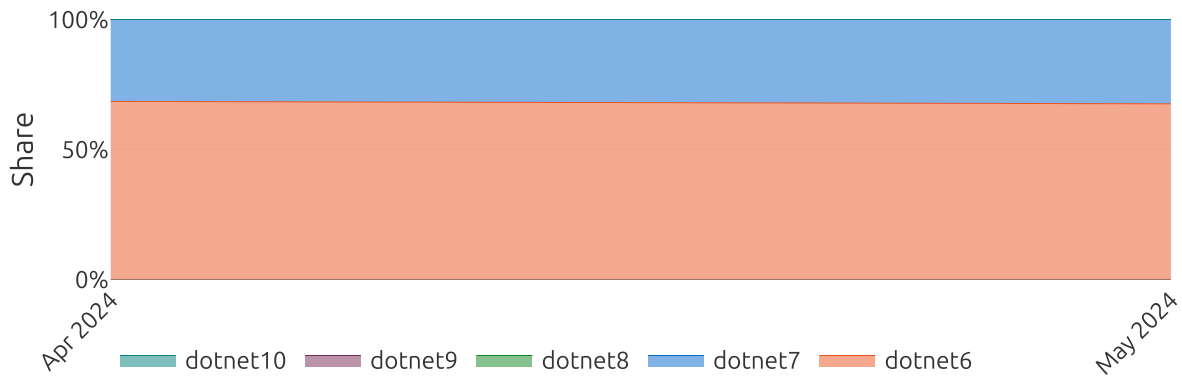

Daily downloads through the month (day of month on x axis)

Composition & adoption

Which .NET releases, Ubuntu series and architectures the downloads came from, and how the mix moved.

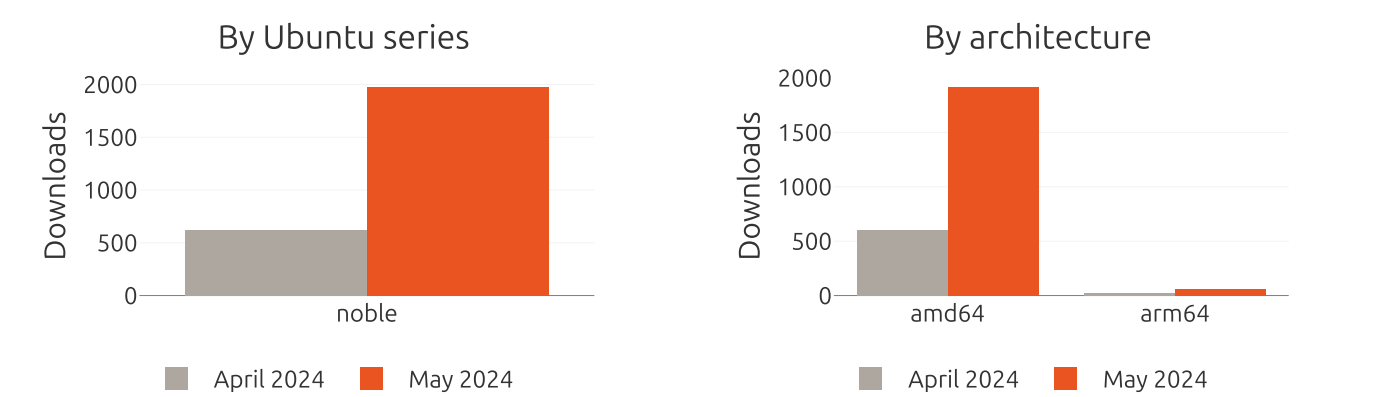

Share of downloads by .NET version

Version detail

VERSION	DOWNLOADS	SHARE	MOM	SHARE CHANGE
dotnet6	1,333	67.6%	+211.4%	-0.9pp
dotnet7	640	32.4%	+224.9%	+0.9pp

Share change is in percentage points against April 2024.

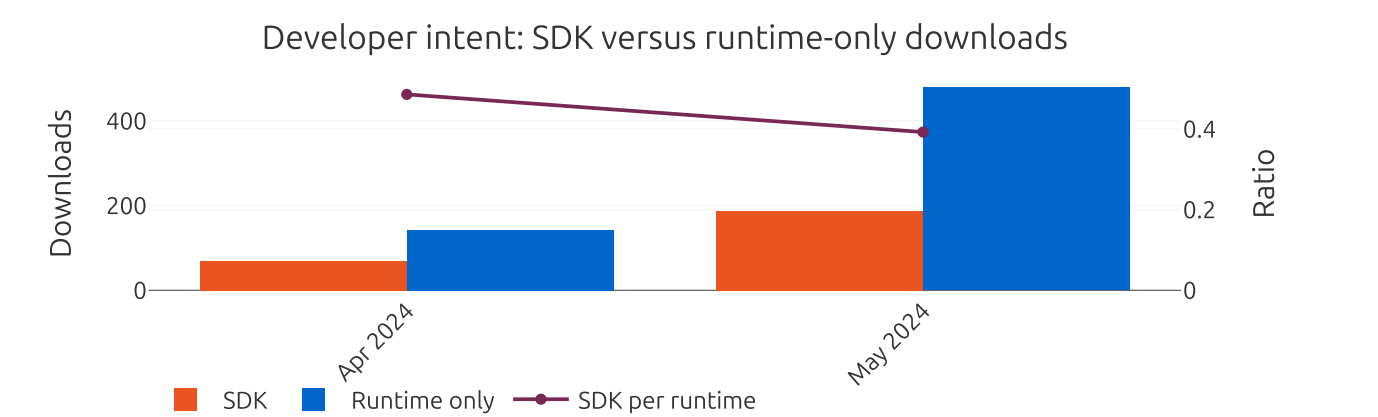

Ubuntu series detail

VALUE	DOWNLOADS	SHARE	APRIL 2024	MOM
noble	1,973	100.0%	625	+215.7%

LTS series (jammy (22.04 LTS), noble (24.04 LTS)) account for 100.0% of the month, +0.0pp on April 2024.

Architecture detail

VALUE	DOWNLOADS	SHARE	APRIL 2024	MOM
amd64	1,914	97.0%	605	+216.4%
arm64	59	3.0%	20	+195.0%

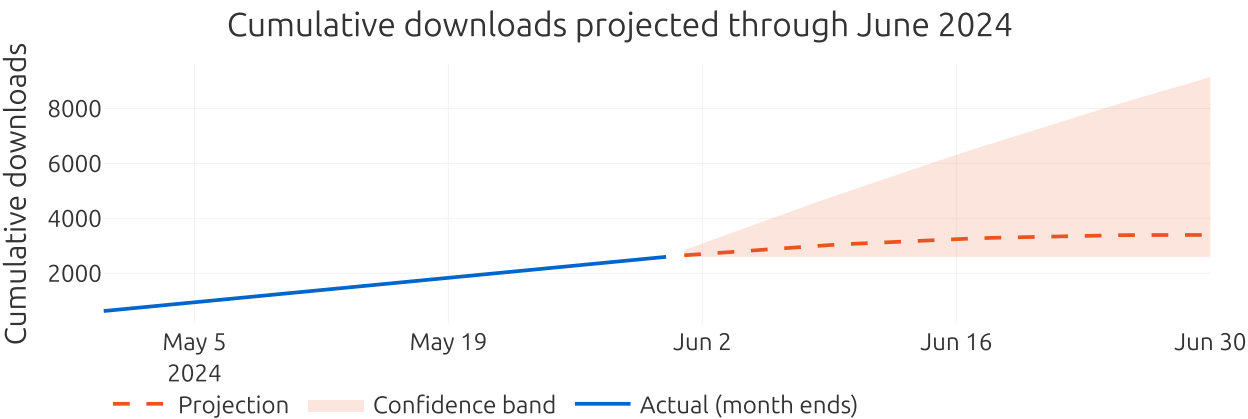

Top packages this month

PACKAGE	TYPE	DOWNLOADS	MOM
dotnet-runtime-6.0	runtime	164	+234.7%
dotnet-hostfxr-6.0	hostfxr	163	+232.7%
aspnetcore-runtime-6.0	aspnetcore-runtime	153	+225.5%
aspnetcore-targeting-pack-6.0	targeting-pack	140	+204.3%
dotnet-targeting-pack-6.0	targeting-pack	140	+211.1%
dotnet-apphost-pack-6.0	apphost-pack	139	+202.2%
dotnet-templates-6.0	other	127	+182.2%
dotnet-sdk-6.0	sdk	126	+173.9%
dotnet-runtime-7.0	runtime	86	+273.9%
netstandard-targeting-pack-2.1	targeting-pack	85	+240.0%

SDK downloads indicate development and build environments; runtime-only downloads indicate deployment targets. Neither is a count of people.

Trajectory & watch items

Where the trend is heading, and what needs a human explanation.

Projection fits the daily rate of the 60 days to 2024-05-31 and extrapolates linearly; it assumes no new release events. Indicative total for June 2024: **798** downloads. Only 50% of the fit window carries data, so treat this figure as a lower bound at best.

Momentum by version

VERSION	DOWNLOADS IN MONTH	LAST 7D VS PRIOR 7D	LAST 30D VS PRIOR 30D	TREND (DL/DAY ²)	EST. HALF-LIFE
dotnet6	1,333	-59.3%	+195.7%	0.5	growing / stable
dotnet7	640	-48.0%	+224.9%	0.5	growing / stable

Windows end on 2024-05-31. Days without data are treated as zero inside these windows, so a collection gap depresses the figures.

Days needing explanation

DATE	DOWNLOADS	ABOVE MONTH MEAN
2024-05-23	363	3.8 σ

Days more than two standard deviations above the month's mean. Common causes are release publications, mirror synchronisation and CI bursts.

Data coverage

MEASURE	VALUE
Days in month	31
Days expected in window	31
Days with download counts	27
Coverage	87.1%
Missing days	4
Gaps	2024-05-04, 2024-05-13, 2024-05-15, 2024-05-18
Month fully elapsed in dataset	yes
Publications active in month	52
Publications first seen in month	20
Collector last run	2026-07-31

A publication is one binary package version in one series and architecture. A burst of first-seen publications usually follows a release upload or a resumed collection window, not a change in demand.

Methodology & limitations

Figures count package downloads recorded by Launchpad for the dotnet/backports PPA only.

The primary Ubuntu archive publishes no download telemetry, so packages installed from it are not represented here. This report is a directional indicator, not total .NET usage on Ubuntu.

Downloads are not users. CI/CD pipelines, container image builds, mirrors and repeated installations all inflate counts, and one developer may generate many downloads.

Counts are deduplicated per publication and day, keeping the maximum value reported by Launchpad; recent days may still rise as Launchpad reporting settles.

Debug-symbol packages are excluded from every figure in this report.

No data is collected for any other programming language, so this report makes no cross-language comparison.

Source: Launchpad download counts for Backports PPA. Collected by scripts/collect.py; figures reproducible from data/downloads.json for month 2024-05.
