

.NET on Ubuntu — November 2024

Package download statistics for the dotnet/backports PPA on Launchpad.

Reporting period	November 2024 (2024-11-01 to 2024-11-30, UTC)
Data window	2024-04-26 to 2026-07-31
Generated	2026-08-03 00:40:04 UTC
Origin	Backports PPA
Scope	dotnet6, dotnet7, dotnet8, dotnet9, dotnet10 · all Ubuntu series and architectures · debug-symbol packages excluded

At a glance

Headline volume and the month's most material movements.

 **Partial month.** 28 of 30 days carry download counts (93%). Totals understate actual volume.

Downloads in month 20,422 vs October 2024: +92.6%	Average per day 729 over 28 days with data	Year on year n/a no comparable month	Peak day 6,135 2024-11-28
Leading version dotnet9 60.0% of the month · 3 active versions	Newest version share 60.0% dotnet9 · +55.9pp	SDK per runtime download 0.45 developer-intent proxy · +5.1%	Lifetime to month end 52,571 cumulative since 2024-04-26

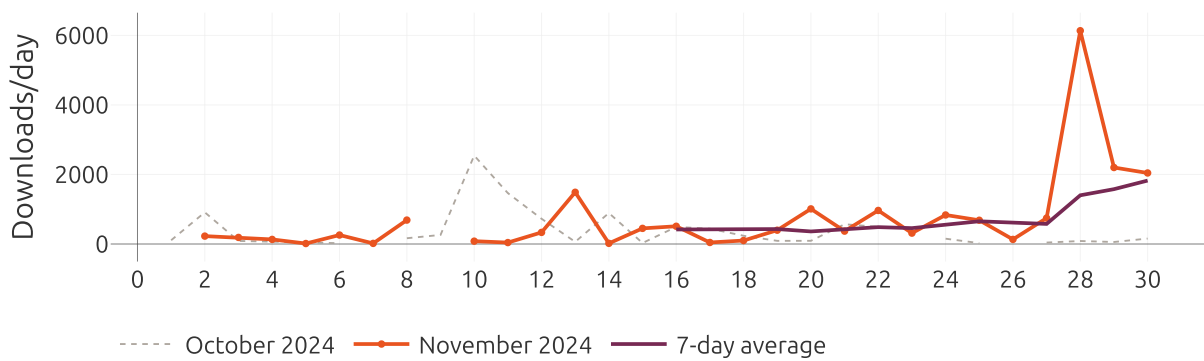

Key findings

- Data covers 28 of 30 days (93%); 2 day(s) are missing, so monthly totals understate actual volume and month-on-month comparisons are not like for like.
- Unusual spike on 2024-11-28 (6,135 downloads, 4.5σ above the month's mean) — worth confirming the cause before quoting the monthly total.
- 20,422 downloads in November 2024 (729/day), up +92.6% against October 2024.
- Adoption of dotnet9 is accelerating: 60.0% of the month's volume, +55.9pp on October 2024 (+2747.4% in absolute terms).
- dotnet6 is being displaced: 30.5% of volume, -49.9pp on October 2024 — consistent with migration to newer releases.
- Every runtime-only download came with 0.45 SDK downloads (2,076 SDK vs 4,608 runtime) — a proxy for developer-side rather than deployment-side pull.
- Ubuntu noble takes 70.8% of the month's downloads; LTS releases account for 100.0% in total.

Monthly downloads, last 8 months

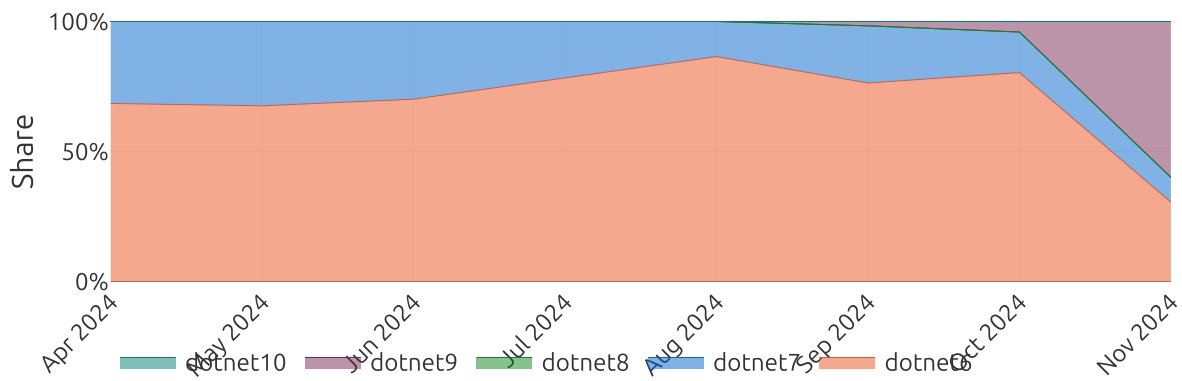

Daily downloads through the month (day of month on x axis)

Composition & adoption

Which .NET releases, Ubuntu series and architectures the downloads came from, and how the mix moved.

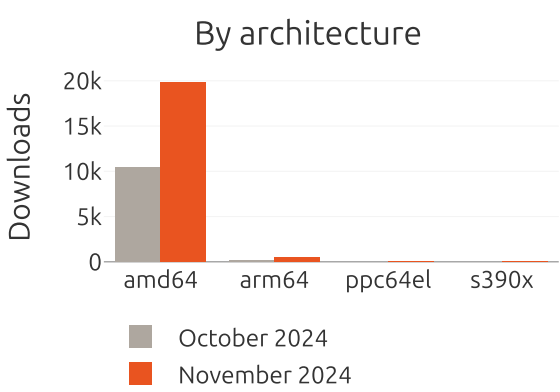

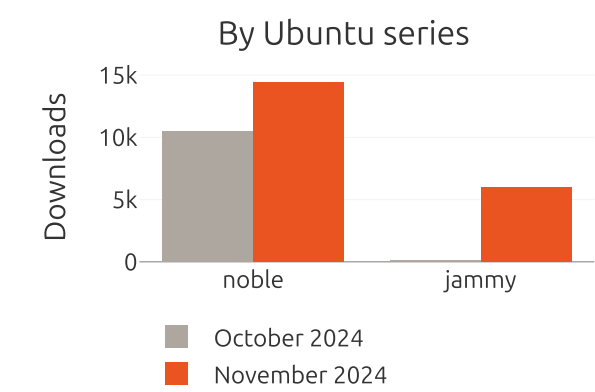

Share of downloads by .NET version

Version detail

VERSION	DOWNLOADS	SHARE	MOM	SHARE CHANGE
dotnet9	12,244	60.0%	+2747.4%	+55.9pp
dotnet6	6,227	30.5%	-26.9%	-49.9pp
dotnet7	1,951	9.6%	+18.0%	-6.0pp

Share change is in percentage points against October 2024.

Ubuntu series detail

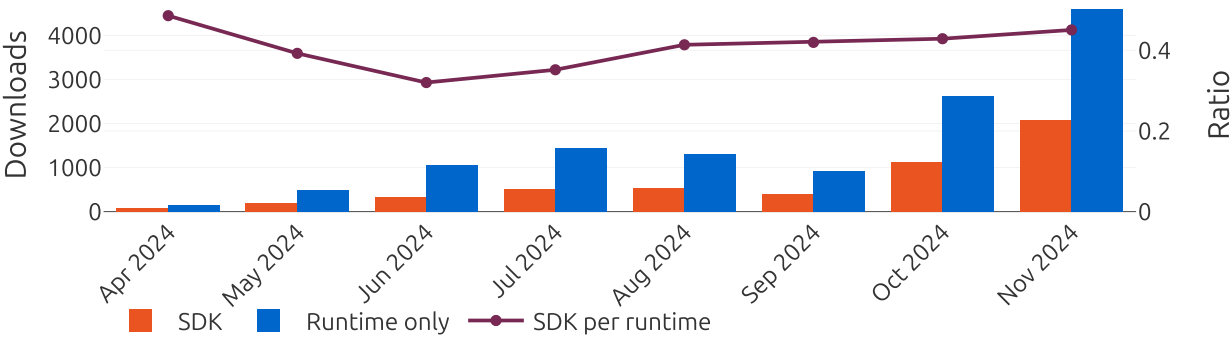

VALUE	DOWNLOADS	SHARE	OCTOBER 2024	MOM
noble	14,457	70.8%	10,512	+37.5%
jammy	5,965	29.2%	94	+6245.7%

LTS series (jammy (22.04 LTS), noble (24.04 LTS)) account for 100.0% of the month, +0.0pp on October 2024.

Architecture detail

VALUE	DOWNLOADS	SHARE	OCTOBER 2024	MOM
amd64	19,880	97.3%	10,414	+90.9%
arm64	498	2.4%	192	+159.4%
ppc64el	22	0.1%	0	n/a
s390x	22	0.1%	0	n/a

Developer intent: SDK versus runtime-only downloads

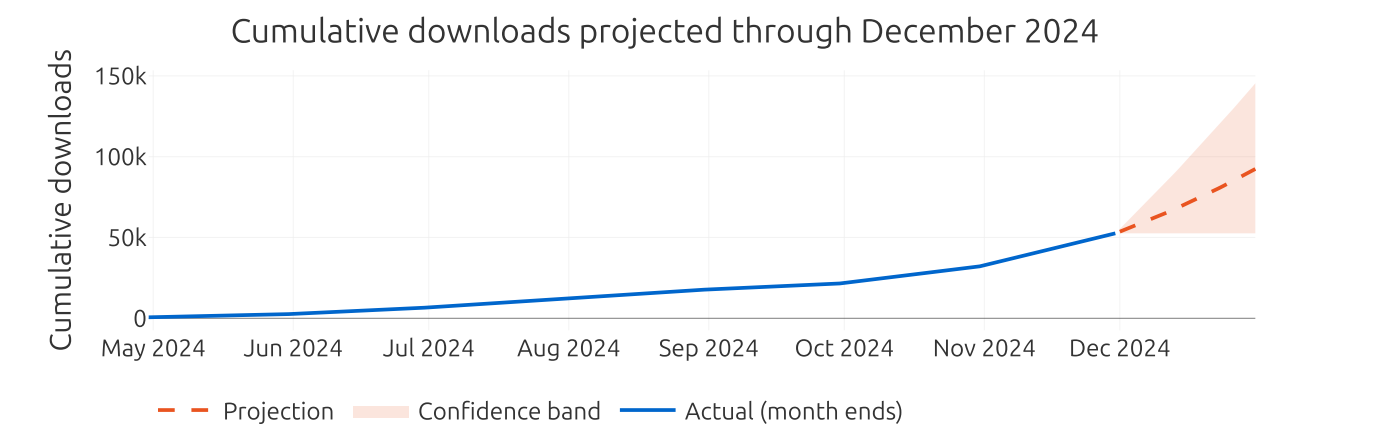

Top packages this month

PACKAGE	TYPE	DOWNLOADS	MOM
dotnet-runtime-9.0	runtime	1,282	+3026.8%
dotnet-host-9.0	host	1,280	+2947.6%
dotnet-hostfxr-9.0	hostfxr	1,278	+2942.9%
aspnetcore-runtime-9.0	aspnetcore-runtime	1,234	+2838.1%
dotnet-sdk-9.0	sdk	1,196	+2890.0%
netstandard-targeting-pack-2.1-9.0	targeting-pack	1,192	+2807.3%
dotnet-apphost-pack-9.0	apphost-pack	1,175	+2765.9%
aspnetcore-targeting-pack-9.0	targeting-pack	1,173	+2761.0%
dotnet-targeting-pack-9.0	targeting-pack	1,172	+2758.5%
dotnet-templates-9.0	other	1,170	+2753.7%

SDK downloads indicate development and build environments; runtime-only downloads indicate deployment targets. Neither is a count of people.

Trajectory & watch items

Where the trend is heading, and what needs a human explanation.

Projection fits the daily rate of the 60 days to 2024-11-30 and extrapolates linearly; it assumes no new release events. Indicative total for December 2024: 39,836 downloads.

Momentum by version

VERSION	DOWNLOADS IN MONTH	LAST 7D VS PRIOR 7D	LAST 30D VS PRIOR 30D	TREND (DL/DAY²)	EST. HALF-LIFE
dotnet6	6,227	+59.9%	-26.4%	8.2	growing / stable
dotnet7	1,951	+123.8%	+21.1%	3.3	growing / stable
dotnet9	12,244	+536.5%	+2747.4%	57.9	growing / stable

Windows end on 2024-11-30. Days without data are treated as zero inside these windows, so a collection gap depresses the figures.

Days needing explanation

DATE	DOWNLOADS	ABOVE MONTH MEAN
2024-11-28	6,135	4.5σ

Days more than two standard deviations above the month's mean. Common causes are release publications, mirror synchronisation and CI bursts.

Data coverage

MEASURE	VALUE
Days in month	30
Days expected in window	30
Days with download counts	28
Coverage	93.3%
Missing days	2
Gaps	2024-11-01, 2024-11-09
Month fully elapsed in dataset	yes
Publications active in month	209
Publications first seen in month	143
Collector last run	2026-07-31

A publication is one binary package version in one series and architecture. A burst of first-seen publications usually follows a release upload or a resumed collection window, not a change in demand.

Methodology & limitations

Figures count package downloads recorded by Launchpad for the dotnet/backports PPA only.

The primary Ubuntu archive publishes no download telemetry, so packages installed from it are not represented here. This report is a directional indicator, not total .NET usage on Ubuntu.

Downloads are not users. CI/CD pipelines, container image builds, mirrors and repeated installations all inflate counts, and one developer may generate many downloads.

Counts are deduplicated per publication and day, keeping the maximum value reported by Launchpad; recent days may still rise as Launchpad reporting settles.

Debug-symbol packages are excluded from every figure in this report.

No data is collected for any other programming language, so this report makes no cross-language comparison.

Source: Launchpad download counts for Backports PPA. Collected by scripts/collect.py; figures reproducible from data/downloads.json for month 2024-11.
