

.NET on Ubuntu — July 2025

Package download statistics for the dotnet/backports PPA on Launchpad.

Reporting period	July 2025 (2025-07-01 to 2025-07-31, UTC)
Data window	2024-04-26 to 2026-07-31
Generated	2026-08-03 00:40:27 UTC
Origin	Backports PPA
Scope	dotnet6, dotnet7, dotnet8, dotnet9, dotnet10 · all Ubuntu series and architectures · debug-symbol packages excluded

At a glance

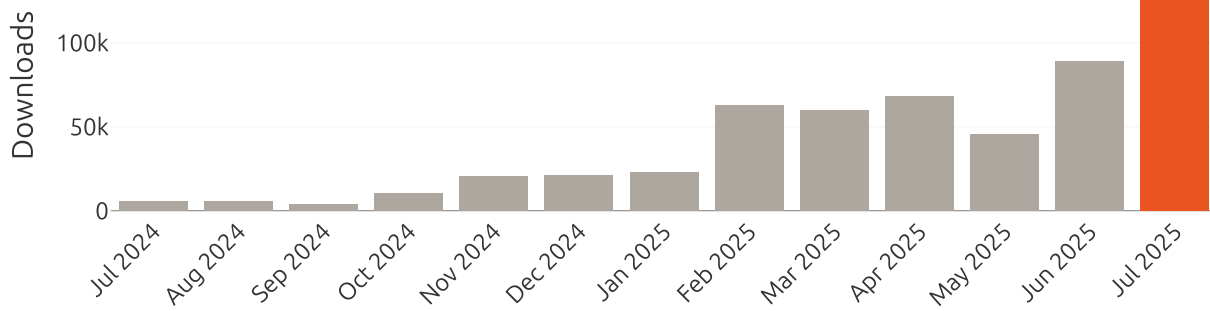

Headline volume and the month's most material movements.

Downloads in month 141,825 vs June 2025: +59.5%	Average per day 4,575 over 31 days with data	Year on year 25× vs July 2024 (5,602)	Peak day 20,100 2025-07-30
Leading version dotnet9 84.2% of the month · 3 active versions	Newest version share 84.2% dotnet9 · -1.3pp	SDK per runtime download 0.75 developer-intent proxy · -0.4%	Lifetime to month end 563,953 cumulative since 2024-04-26

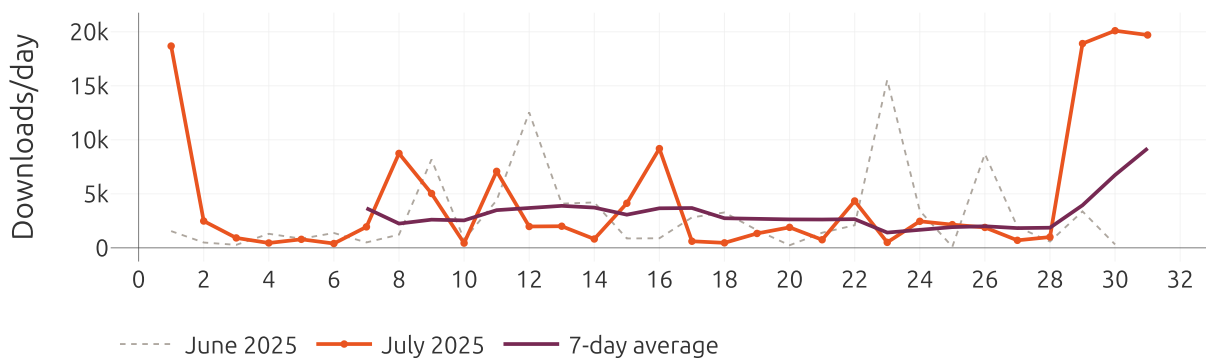

Key findings

141,825 downloads in July 2025 (4,575/day), up +59.5% against June 2025. Year on year the month is 25× higher than July 2024.
Every runtime-only download came with 0.75 SDK downloads (21,768 SDK vs 29,188 runtime) — a proxy for developer-side rather than deployment-side pull.
Ubuntu noble takes 72.0% of the month's downloads; LTS releases account for 100.0% in total.
Linear extrapolation of the last 60 days projects roughly 215,637 downloads in August 2025 (+52.0% on July 2025).

Monthly downloads, last 13 months

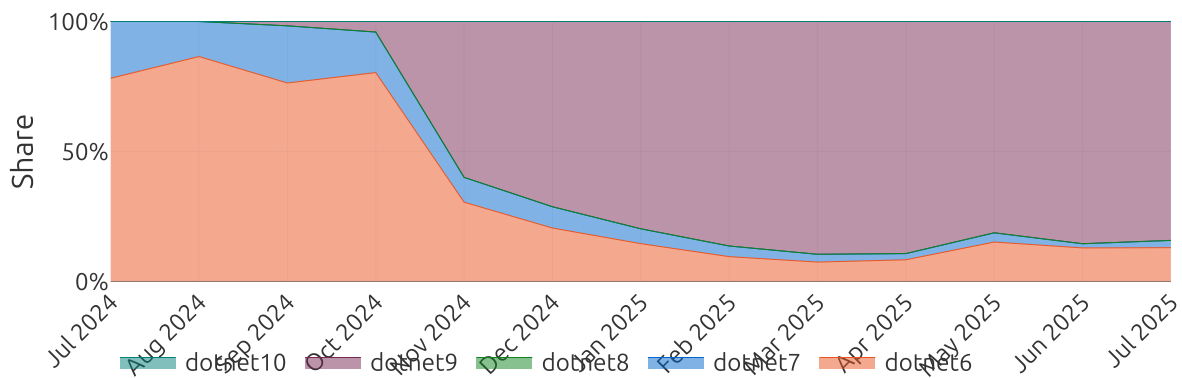

Daily downloads through the month (day of month on x axis)

Composition & adoption

Which .NET releases, Ubuntu series and architectures the downloads came from, and how the mix moved.

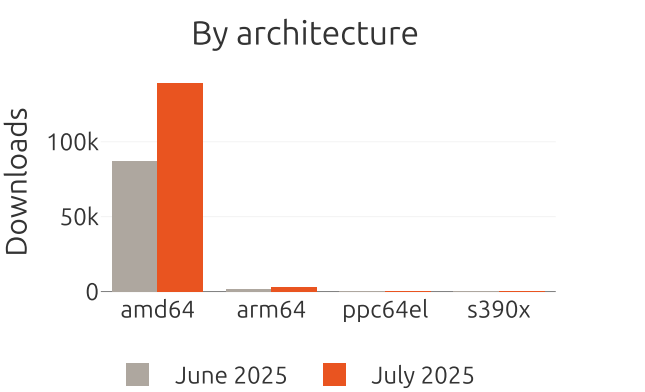

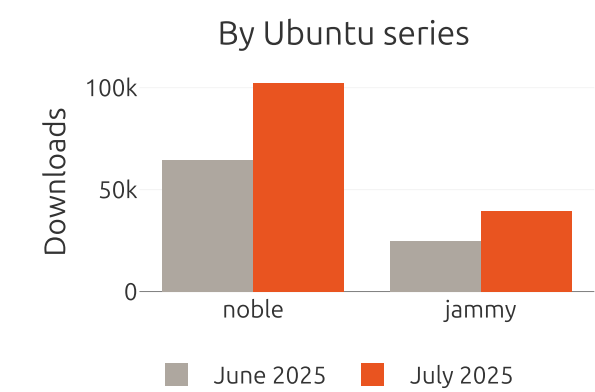

Share of downloads by .NET version

Version detail

VERSION	DOWNLOADS	SHARE	MOM	SHARE CHANGE
dotnet9	119,418	84.2%	+57.1%	-1.3pp
dotnet6	18,433	13.0%	+60.7%	+0.1pp
dotnet7	3,974	2.8%	+176.0%	+1.2pp

Share change is in percentage points against June 2025.

Ubuntu series detail

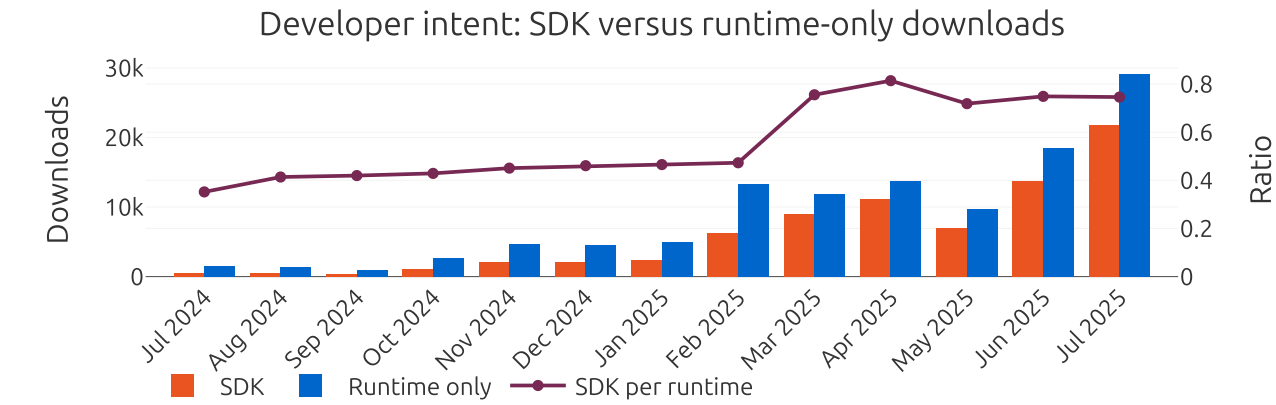

VALUE	DOWNLOADS	SHARE	JUNE 2025	MOM
noble	102,106	72.0%	64,387	+58.6%
jammy	39,719	28.0%	24,529	+61.9%

LTS series (jammy (22.04 LTS), noble (24.04 LTS)) account for 100.0% of the month, +0.0pp on June 2025.

Architecture detail

VALUE	DOWNLOADS	SHARE	JUNE 2025	MOM
amd64	138,957	98.0%	87,420	+59.0%
arm64	2,679	1.9%	1,442	+85.8%
ppc64el	161	0.1%	32	+403.1%
s390x	28	0.0%	22	+27.3%

Developer intent: SDK versus runtime-only downloads

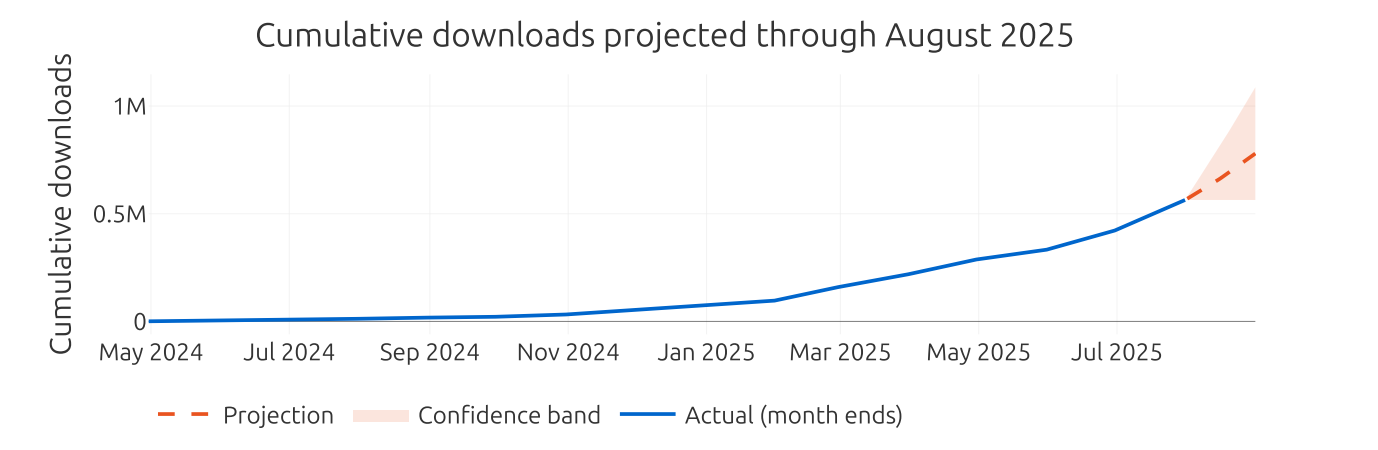

Top packages this month

PACKAGE	TYPE	DOWNLOADS	MOM
dotnet-runtime-9.0	runtime	11,978	+56.8%
dotnet-host-9.0	host	11,933	+56.3%
dotnet-hostfxr-9.0	hostfxr	11,914	+57.0%
aspnetcore-runtime-9.0	aspnetcore-runtime	11,623	+56.0%
dotnet-apphost-pack-9.0	apphost-pack	10,581	+58.9%
aspnetcore-targeting-pack-9.0	targeting-pack	10,580	+58.2%
dotnet-targeting-pack-9.0	targeting-pack	10,576	+59.0%
netstandard-targeting-pack-2.1-9.0	targeting-pack	10,234	+57.9%
dotnet-templates-9.0	other	10,190	+57.9%
dotnet-sdk-9.0	sdk	10,163	+59.4%

SDK downloads indicate development and build environments; runtime-only downloads indicate deployment targets. Neither is a count of people.

Trajectory & watch items

Where the trend is heading, and what needs a human explanation.

Projection fits the daily rate of the 60 days to 2025-07-31 and extrapolates linearly; it assumes no new release events. Indicative total for August 2025: 215,637 downloads.

Momentum by version

VERSION	DOWNLOADS IN MONTH	LAST 7D VS PRIOR 7D	LAST 30D VS PRIOR 30D	TREND (DL/DAY²)	EST. HALF-LIFE
dotnet6	18,433	+397.7%	+16.4%	21.6	growing / stable
dotnet7	3,974	+432.5%	+79.7%	-2.5	growing / stable
dotnet9	119,418	+458.2%	+14.7%	150.9	growing / stable

Windows end on 2025-07-31. Days without data are treated as zero inside these windows, so a collection gap depresses the figures.

Days needing explanation

DATE	DOWNLOADS	ABOVE MONTH MEAN
2025-07-30	20,100	2.5σ
2025-07-31	19,703	2.4σ
2025-07-29	18,909	2.3σ
2025-07-01	18,680	2.3σ

Days more than two standard deviations above the month's mean. Common causes are release publications, mirror synchronisation and CI bursts.

Data coverage

MEASURE	VALUE
Days in month	31
Days expected in window	31
Days with download counts	31
Coverage	100.0%
Missing days	0
Gaps	none
Month fully elapsed in dataset	yes
Publications active in month	208
Publications first seen in month	108
Collector last run	2026-07-31

A publication is one binary package version in one series and architecture. A burst of first-seen publications usually follows a release upload or a resumed collection window, not a change in demand.

Methodology & limitations

Figures count package downloads recorded by Launchpad for the dotnet/backports PPA only.

The primary Ubuntu archive publishes no download telemetry, so packages installed from it are not represented here. This report is a directional indicator, not total .NET usage on Ubuntu.

Downloads are not users. CI/CD pipelines, container image builds, mirrors and repeated installations all inflate counts, and one developer may generate many downloads.

Counts are deduplicated per publication and day, keeping the maximum value reported by Launchpad; recent days may still rise as Launchpad reporting settles.

Debug-symbol packages are excluded from every figure in this report.

No data is collected for any other programming language, so this report makes no cross-language comparison.

Source: Launchpad download counts for Backports PPA. Collected by scripts/collect.py; figures reproducible from data/downloads.json for month 2025-07.
