

.NET on Ubuntu — February 2026

Package download statistics for the dotnet/backports PPA on Launchpad.

Reporting period	February 2026 (2026-02-01 to 2026-02-28, UTC)
Data window	2024-04-26 to 2026-07-31
Generated	2026-08-03 00:40:48 UTC
Origin	Backports PPA
Scope	dotnet6, dotnet7, dotnet8, dotnet9, dotnet10 · all Ubuntu series and architectures · debug-symbol packages excluded

At a glance

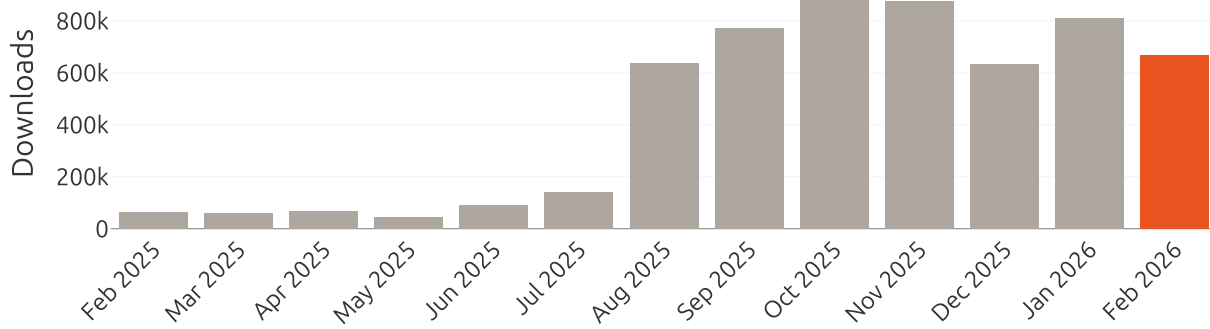

Headline volume and the month's most material movements.

Downloads in month 666,001 vs January 2026: -17.7%	Average per day 23,786 over 28 days with data	Year on year 11× vs February 2025 (62,720)	Peak day 54,115 2026-02-12
Leading version dotnet9 75.5% of the month · 5 active versions	Newest version share 18.9% dotnet10 · +5.8pp	SDK per runtime download 0.74 developer-intent proxy · +23.6%	Lifetime to month end 5,875,904 cumulative since 2024-04-26

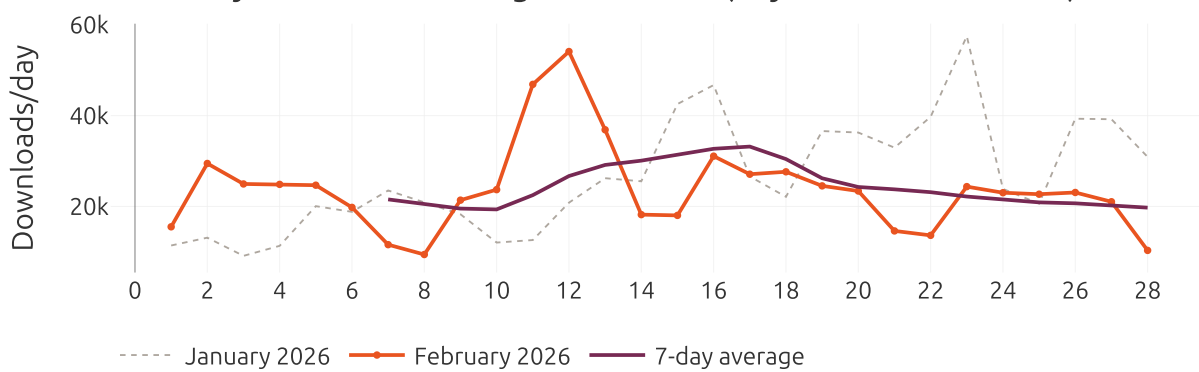

Key findings

Unusual spike on 2026-02-12 (54,115 downloads, 3.1σ above the month's mean) — worth confirming the cause before quoting the monthly total.
666,001 downloads in February 2026 (23,786/day), down -17.7% against January 2026. Year on year the month is 11× higher than February 2025.
Adoption of dotnet10 is accelerating: 18.9% of the month's volume, +5.8pp on January 2026 (+18.6% in absolute terms).
dotnet9 is being displaced: 75.5% of volume, -6.4pp on January 2026 — consistent with migration to newer releases.
dotnet9 remains the most downloaded release at 75.5% of the month, across 5 active .NET versions.
Every runtime-only download came with 0.74 SDK downloads (107,166 SDK vs 144,165 runtime), +23.6% on January 2026 — the mix shifted towards development and build environments.

Monthly downloads, last 13 months

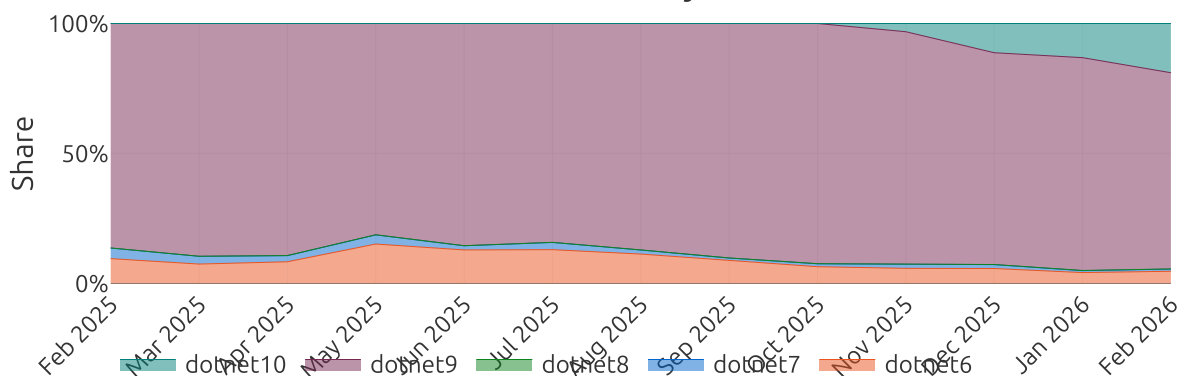

Daily downloads through the month (day of month on x axis)

Composition & adoption

Which .NET releases, Ubuntu series and architectures the downloads came from, and how the mix moved.

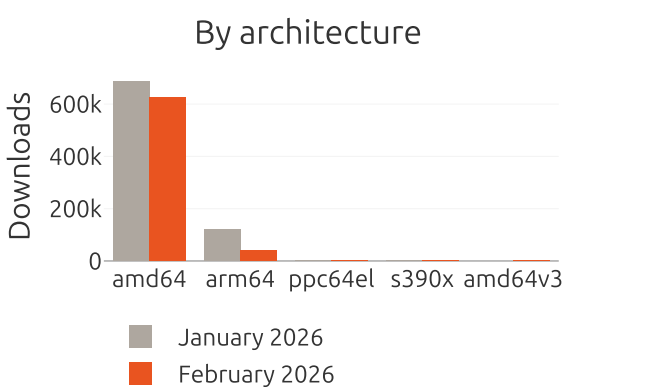

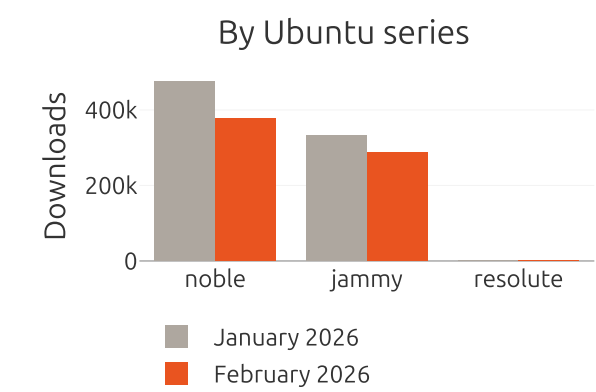

Share of downloads by .NET version

Version detail

VERSION	DOWNLOADS	SHARE	MOM	SHARE CHANGE
dotnet9	502,562	75.5%	-24.1%	-6.4pp
dotnet10	126,165	18.9%	+18.6%	+5.8pp
dotnet6	31,242	4.7%	-7.8%	+0.5pp
dotnet7	5,577	0.8%	-8.2%	+0.1pp
dotnet8	455	0.1%	-1.5%	+0.0pp

Share change is in percentage points against January 2026.

Ubuntu series detail

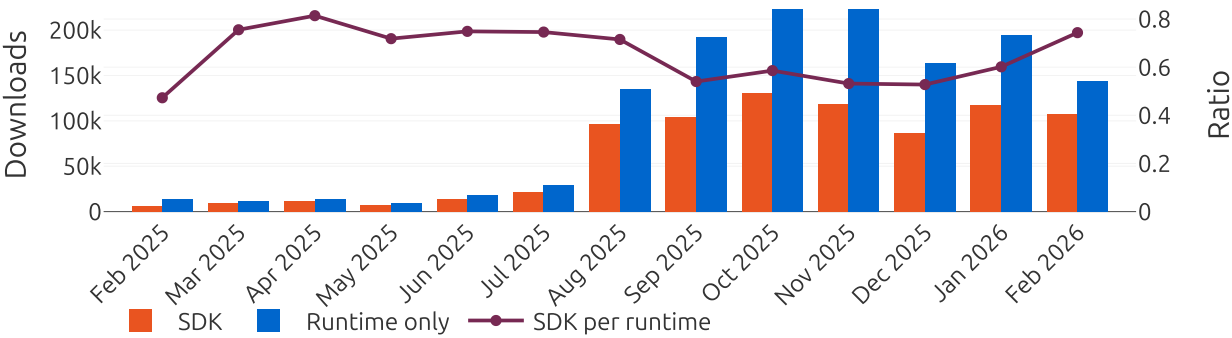

VALUE	DOWNLOADS	SHARE	JANUARY 2026	MOM
noble	377,278	56.6%	476,580	-20.8%
jammy	287,761	43.2%	332,005	-13.3%
resolute	962	0.1%	792	+21.5%

LTS series (jammy (22.04 LTS), noble (24.04 LTS)) account for 99.9% of the month, -0.0pp on January 2026.

Architecture detail

VALUE	DOWNLOADS	SHARE	JANUARY 2026	MOM
amd64	626,294	94.0%	688,220	-9.0%
arm64	39,029	5.9%	120,658	-67.7%
ppc64el	329	0.0%	236	+39.4%
s390x	301	0.0%	239	+25.9%
amd64v3	48	0.0%	24	+100.0%

Developer intent: SDK versus runtime-only downloads

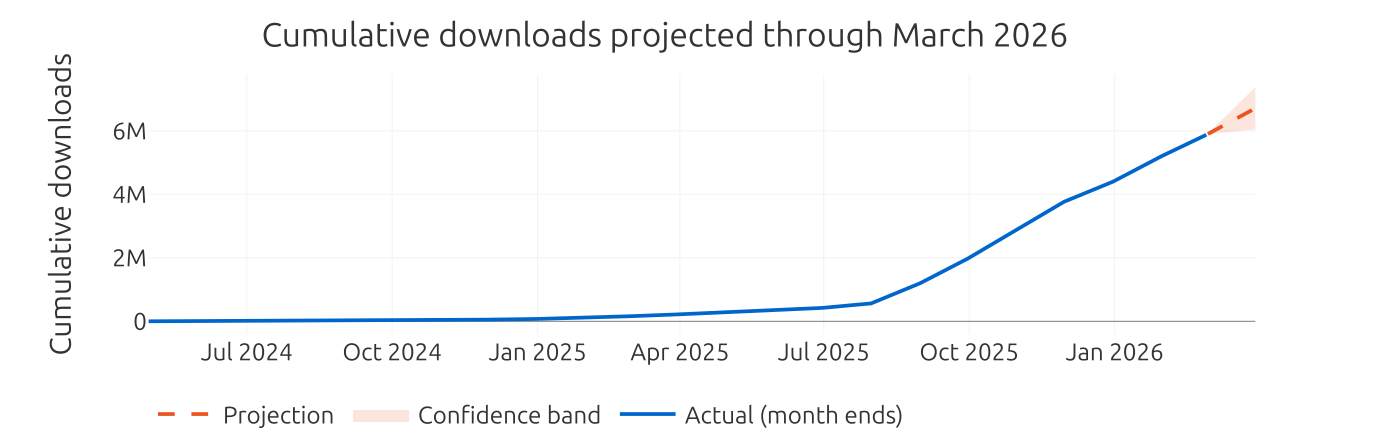

Top packages this month

PACKAGE	TYPE	DOWNLOADS	MOM
dotnet-runtime-9.0	runtime	54,040	-33.8%
dotnet-hostfxr-9.0	hostfxr	53,876	-33.9%
aspnetcore-runtime-9.0	aspnetcore-runtime	52,567	-34.2%
dotnet-host-9.0	host	45,660	-38.1%
aspnetcore-targeting-pack-9.0	targeting-pack	43,319	-14.4%
dotnet-apphost-pack-9.0	apphost-pack	43,264	-14.3%
dotnet-targeting-pack-9.0	targeting-pack	43,135	-14.4%
netstandard-targeting-pack-2.1-9.0	targeting-pack	42,313	-14.4%
dotnet-templates-9.0	other	42,030	-14.4%
dotnet-sdk-9.0	sdk	41,863	-14.1%

SDK downloads indicate development and build environments; runtime-only downloads indicate deployment targets. Neither is a count of people.

Trajectory & watch items

Where the trend is heading, and what needs a human explanation.

Projection fits the daily rate of the 60 days to 2026-02-28 and extrapolates linearly; it assumes no new release events. Indicative total for March 2026: 835,441 downloads.

Momentum by version

VERSION	DOWNLOADS IN MONTH	LAST 7D VS PRIOR 7D	LAST 30D VS PRIOR 30D	TREND (DL/DAY²)	EST. HALF-LIFE
dotnet6	31,242	-18.1%	+2.6%	-14.1	growing / stable
dotnet7	5,577	+56.1%	-3.9%	-1.9	194 days
dotnet8	455	-69.9%	-2.4%	-0.7	26 days
dotnet9	502,562	-22.6%	-16.6%	-144.4	39 days
dotnet10	126,165	+4.2%	+31.8%	9.9	growing / stable

Windows end on 2026-02-28. Days without data are treated as zero inside these windows, so a collection gap depresses the figures.

Days needing explanation

DATE	DOWNLOADS	ABOVE MONTH MEAN
2026-02-12	54,115	3.1σ
2026-02-11	46,884	2.3σ

Days more than two standard deviations above the month's mean. Common causes are release publications, mirror synchronisation and CI bursts.

Data coverage

MEASURE	VALUE
Days in month	28
Days expected in window	28
Days with download counts	28
Coverage	100.0%
Missing days	0
Gaps	none
Month fully elapsed in dataset	yes
Publications active in month	667
Publications first seen in month	428
Collector last run	2026-07-31

A publication is one binary package version in one series and architecture. A burst of first-seen publications usually follows a release upload or a resumed collection window, not a change in demand.

Methodology & limitations

Figures count package downloads recorded by Launchpad for the dotnet/backports PPA only.

The primary Ubuntu archive publishes no download telemetry, so packages installed from it are not represented here. This report is a directional indicator, not total .NET usage on Ubuntu.

Downloads are not users. CI/CD pipelines, container image builds, mirrors and repeated installations all inflate counts, and one developer may generate many downloads.

Counts are deduplicated per publication and day, keeping the maximum value reported by Launchpad; recent days may still rise as Launchpad reporting settles.

Debug-symbol packages are excluded from every figure in this report.

No data is collected for any other programming language, so this report makes no cross-language comparison.

Source: Launchpad download counts for Backports PPA. Collected by scripts/collect.py; figures reproducible from data/downloads.json for month 2026-02.
