

.NET on Ubuntu — July 2026

Package download statistics for the dotnet/backports PPA on Launchpad.

Reporting period	July 2026 (2026-07-01 to 2026-07-31, UTC)
Data window	2024-04-26 to 2026-07-31
Generated	2026-08-03 00:41:03 UTC
Origin	Backports PPA
Scope	dotnet6, dotnet7, dotnet8, dotnet9, dotnet10 · all Ubuntu series and architectures · debug-symbol packages excluded

At a glance

Headline volume and the month's most material movements.

 **Partial month.** 20 of 31 days carry download counts (65%). Totals understate actual volume.

Downloads in month 190,305 vs June 2026: n/a	Average per day 9,515 over 20 days with data	Year on year +34.2% vs July 2025 (141,825)	Peak day 15,759 2026-07-16
Leading version dotnet9 43.3% of the month · 5 active versions	Newest version share 21.5% dotnet10 · n/a	SDK per runtime download 0.74 developer-intent proxy · n/a	Lifetime to month end 8,007,376 cumulative since 2024-04-26

Key findings

Data covers 20 of 31 days (65%); 11 day(s) are missing, so monthly totals understate actual volume and month-on-month comparisons are not like for like.

190,305 downloads in July 2026 (9,515/day).

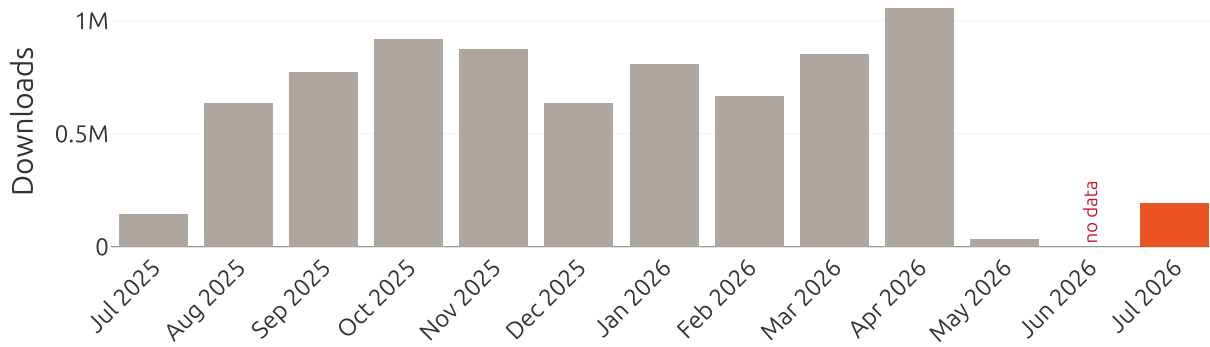

dotnet10 accounts for 21.5% of the month's downloads.

dotnet9 remains the most downloaded release at 43.3% of the month, across 5 active .NET versions.

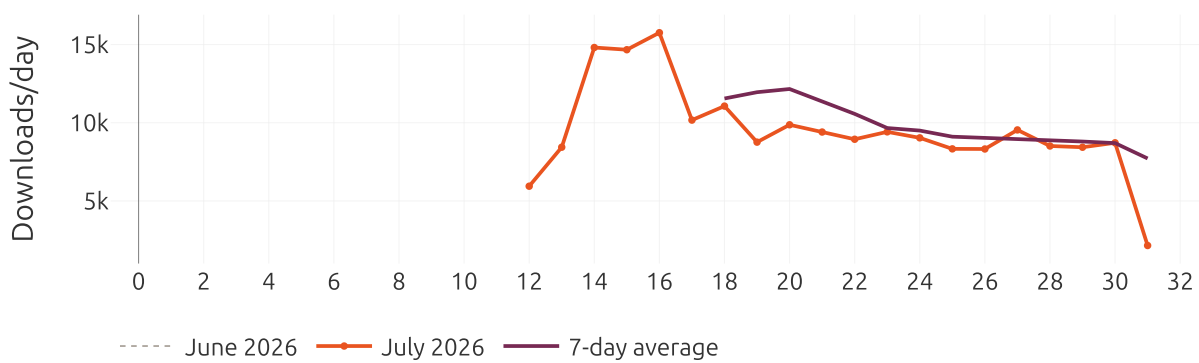

Every runtime-only download came with 0.74 SDK downloads (32,432 SDK vs 43,813 runtime) — a proxy for developer-side rather than deployment-side pull.

Ubuntu jammy takes 41.8% of the month's downloads; LTS releases account for 72.8% in total.

Monthly downloads, last 13 months

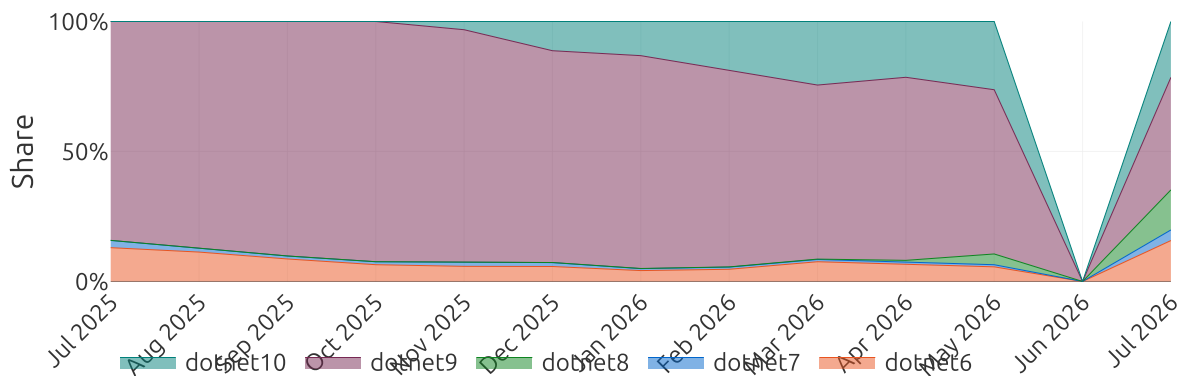

Daily downloads through the month (day of month on x axis)

Composition & adoption

Which .NET releases, Ubuntu series and architectures the downloads came from, and how the mix moved.

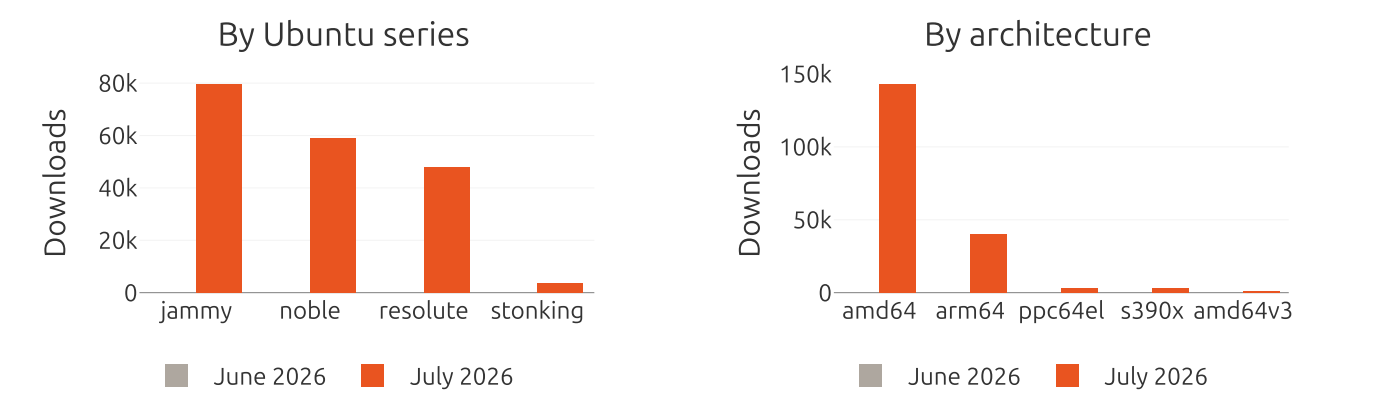

Share of downloads by .NET version

Version detail

VERSION	DOWNLOADS	SHARE	MOM	SHARE CHANGE
dotnet9	82,379	43.3%	n/a	n/a
dotnet10	40,884	21.5%	n/a	n/a
dotnet6	29,956	15.7%	n/a	n/a
dotnet8	29,320	15.4%	n/a	n/a
dotnet7	7,766	4.1%	n/a	n/a

Share change is in percentage points against June 2026.

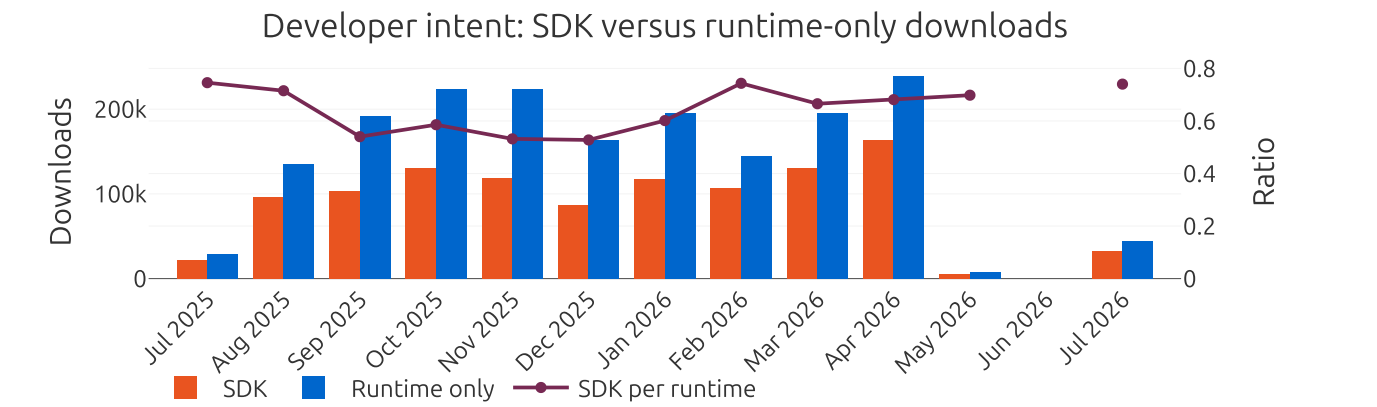

Ubuntu series detail

VALUE	DOWNLOADS	SHARE	JUNE 2026	MOM
jammy	79,473	41.8%	0	n/a
noble	58,992	31.0%	0	n/a
resolute	48,080	25.3%	0	n/a
stonking	3,760	2.0%	0	n/a

LTS series (jammy (22.04 LTS), noble (24.04 LTS)) account for 72.8% of the month, n/a on June 2026.

Architecture detail

VALUE	DOWNLOADS	SHARE	JUNE 2026	MOM
amd64	142,760	75.0%	0	n/a
arm64	40,144	21.1%	0	n/a
ppc64el	3,100	1.6%	0	n/a
s390x	3,075	1.6%	0	n/a
amd64v3	1,226	0.6%	0	n/a

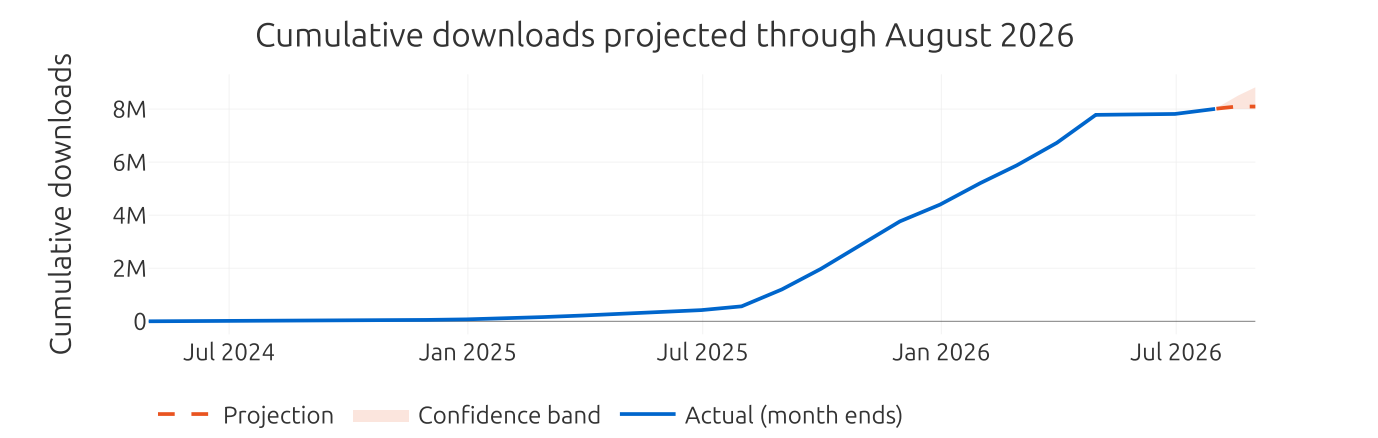

Top packages this month

PACKAGE	TYPE	DOWNLOADS	MOM
dotnet-runtime-9.0	runtime	8,294	n/a
aspnetcore-runtime-9.0	aspnetcore-runtime	8,114	n/a
dotnet-hostfxr-9.0	hostfxr	8,067	n/a
dotnet-host-9.0	host	7,282	n/a
dotnet-sdk-9.0	sdk	6,106	n/a
dotnet-apphost-pack-9.0	apphost-pack	5,949	n/a
dotnet-targeting-pack-9.0	targeting-pack	5,947	n/a
aspnetcore-targeting-pack-9.0	targeting-pack	5,938	n/a
netstandard-targeting-pack-2.1-9.0	targeting-pack	5,711	n/a
dotnet-templates-9.0	other	5,666	n/a

SDK downloads indicate development and build environments; runtime-only downloads indicate deployment targets. Neither is a count of people.

Trajectory & watch items

Where the trend is heading, and what needs a human explanation.

Projection fits the daily rate of the 60 days to 2026-07-31 and extrapolates linearly; it assumes no new release events. Indicative total for August 2026: **89,433** downloads. **Only 33% of the fit window carries data, so treat this figure as a lower bound at best.**

Momentum by version

VERSION	DOWNLOADS IN MONTH	LAST 7D VS PRIOR 7D	LAST 30D VS PRIOR 30D	TREND (DL/DAY²)	EST. HALF-LIFE
dotnet6	29,956	-11.2%	n/a	64.2	56 days
dotnet7	7,766	-5.9%	n/a	17.3	130 days
dotnet8	29,320	-24.1%	n/a	55.8	26 days
dotnet9	82,379	-18.6%	n/a	146.7	18 days
dotnet10	40,884	-23.9%	n/a	68.0	16 days

Windows end on 2026-07-31. Days without data are treated as zero inside these windows, so a collection gap depresses the figures.

Days needing explanation

DATE	DOWNLOADS	ABOVE MONTH MEAN
2026-07-16	15,759	2.1σ

Days more than two standard deviations above the month's mean. Common causes are release publications, mirror synchronisation and CI bursts.

Data coverage

MEASURE	VALUE
Days in month	31
Days expected in window	31
Days with download counts	20
Coverage	64.5%
Missing days	11
Gaps	2026-07-01 to 2026-07-11
Month fully elapsed in dataset	yes
Publications active in month	1,422
Publications first seen in month	1,374
Collector last run	2026-07-31

A publication is one binary package version in one series and architecture. A burst of first-seen publications usually follows a release upload or a resumed collection window, not a change in demand.

Methodology & limitations

Figures count package downloads recorded by Launchpad for the dotnet/backports PPA only.

The primary Ubuntu archive publishes no download telemetry, so packages installed from it are not represented here. This report is a directional indicator, not total .NET usage on Ubuntu.

Downloads are not users. CI/CD pipelines, container image builds, mirrors and repeated installations all inflate counts, and one developer may generate many downloads.

Counts are deduplicated per publication and day, keeping the maximum value reported by Launchpad; recent days may still rise as Launchpad reporting settles.

Debug-symbol packages are excluded from every figure in this report.

No data is collected for any other programming language, so this report makes no cross-language comparison.

Source: Launchpad download counts for Backports PPA. Collected by scripts/collect.py; figures reproducible from data/downloads.json for month 2026-07.
